just the job for **M. E. L.**

At Magnesium Elektron Limited of course Designers are discovering that M E L Magnesium alloys plus M E L technical service can break through the toughest design problems. As pioneers of British magnesium for a quarter of a century M E L's knowledge and unrivalled experience of the metal is invaluable to the designer.

Magnesium Elektron Limited

Provides a unique service for the production fabrication and testing of magnesium

Employs an outstanding team of research talent which is constantly breaking new ground in magnesium technology keeps pace by its world wide ramifications with new developments in magnesium wherever they occur

Magnesium alloys originated by M E L are the finest in the world For lightness with strength stiffness strength at elevated temperatures they are the answer to many new and challenging demands in industry.

THE "SKEETER" Mk. 6

BECAUSE—

The handling qualities due in part to its three bladed fully articulated rotor, are just those found in the larger types of helicopter. It is not difficult to fly, and the manoeuvrability is exceptional.

The throttle may readily be disconnected from the collective pitch lever permitting practice autorotative landings without stopping the engine, and the engine may safely be left running on the ground.

The engine of 'One Hour Power' rating gives consistent and undiminished performance.

All maintenance can be done from ground level except for the main rotor hub which is reached by using footholds on the helicopter structure.

Vision from the cockpit is unusually good, with a wide aspect rearwards.

A manual control of the centrifugal clutch prevents overloading of the rotor system when starting.

These are some of the features of the Skeeter helicopter which commend it for its chosen duties. Each of them contributes towards the economy which is a feature of its initial and operating costs.

OBJECTS OF THE ASSOCIATION

The objects of the Association are to collect complete and disseminate information of a technical and semi technical nature pertaining to Helicopters and all other types of Rotating Wing Aircraft. The Association aims to work in close co operation with existing Aeronautical Bodies on matters affecting its objects and it may act as an Advisory Body in the promotion of legislation calculated to be of benefit to the development of Rotating Wing Aircraft

Fortune Hunting 1956

The search for mineral deposits is now performed by the Helicopter equipped with a wire-borne magnetometer. These close range surveys at treetop height replace slow foot-slogging and often make a survey possible where no other means of transport could penetrate.

Westland Helicopters are daily employed throughout the world on surveys, crop spraying, exploration remote oilfield transportation and in more publicised personal rescue services on land and at sea in times of blizzard, storm and flood.
