INTERNATIONAL GLACIOLOGICAL SOCIETY

The Society was founded in 1936 to provide a focus for individuals interested in practical and scientific aspects of snow and ice. Membership is open to all individuals who have a scientific, practical or general interest in aspects of snow and ice study.

Papers on glaciology are printed in the *Journal of Glaciology*, which is published six times a year. The Society also publishes the *Annals of Glaciology*, a peer-reviewed, thematic journal, two to four times a year. The Society's news bulletin, *ICE*, is published three times a year.

The Society sponsors symposia, meetings and workshops in many countries throughout the year.

Journal of Glaciology publishes original articles and letters concerning scientific research into any aspect of ice and snow, and interactions between ice, snow, climate and other environmental phenomena including the biosphere and permafrost. Research techniques described in the Journal include, for example, field studies, remote sensing, computer modelling and laboratory studies. Research topics include the nature of and changes in mountain glaciers and ice sheets, including former ice sheets. For example, ice cores extracted from the glaciers and ice sheets reveal detailed information on past atmospheric composition and climate, and changes in the extent and thickness of the ice sheets are also related to climate change. The physical, chemical and crystallographic properties of ice and snow are included, especially but not only as they relate to the flow of ice and to past climate. The Journal also publishes studies of sea ice, and of icebergs, along with their interactions with climate on shorter time scales, and with the ocean. Snow and avalanche research is included in the Journal, with several recent articles investigating avalanche dynamics. Snow and ice on other planets is also within the realm of the Journal of Glaciology, as are studies of atmospheric ice.

Journal of **GLACIOLOGY**

CONTENTS Vol 64 No 247 2018

- 689 **Hui Zhang, Zhongqin Li, Ping Zhou, Xiaofan Zhu, Lin Wang**
Mass-balance observations and reconstruction for Haxilegen Glacier No.51, eastern Tien Shan, from 1999 to 2015
- 700 **Olivier Gagliardini, Mauro A. Werder**
Influence of increasing surface melt over decadal timescales on land-terminating Greenland-type outlet glaciers
- 711 **Gordon K. A. Oswald, Soroush Rezvanbehbahani, Leigh A. Stearns**
Radar evidence of ponded subglacial water in Greenland
- 730 **Zhao Chen, Peter D. Bromirski, Peter Gerstoft, Ralph A. Stephen, Douglas A. Wiens, Richard C. Aster, Andrew A. Nyblade**
Ocean-excited plate waves in the Ross and Pine Island Glacier ice shelves
- 745 **E. De Andrés, J. Otero, F. Navarro, A. Promińska, J. Lapazaran, W. Walczowski**
A two-dimensional glacier–fjord coupled model applied to estimate submarine melt rates and front position changes of Hansbreen, Svalbard
- 759 **Stephen Jiménez, Ravindra Duddu**
On the evaluation of the stress intensity factor in calving models using linear elastic fracture mechanics
- 771 **Pat Wongpan, David J. Prior, Patricia J. Langhorne, Katherine Lilly, Inga J. Smith**
Using electron backscatter diffraction to measure full crystallographic orientation in Antarctic land-fast sea ice
- 781 **Alexandra Pulwicki, Gwenn E. Flowers, Valentina Radić, Derek Bingham**
Estimating winter balance and its uncertainty from direct measurements of snow depth and density on alpine glaciers
- 796 **Jenna M. Zechmann, Adam D. Booth, Martin Truffer, Alessio Gusmeroli, Jason M. Amundson, Christopher F. Larsen**
Active seismic studies in valley glacier settings: strategies and limitations
- 811 **Stefan Lippl, Saurabh Vijay, Matthias Braun**
Automatic delineation of debris-covered glaciers using InSAR coherence derived from X-, C- and L-band radar data: a case study of Yazgyl Glacier
- 822 **Francesca A.M. Falcini, David M. Rippin, Maarten Krabbendam, Katherine A. Selby**
Quantifying bed roughness beneath contemporary and palaeo-ice streams
- 835 **Tino Pieczonka, Tobias Bolch, Melanie Kröhnert, Juliane Peters, Shiyin Liu**
Glacier branch lines and glacier ice thickness estimation for debris-covered glaciers in the Central Tien Shan
- Letter*
- 850 **Leonora King**
Comparing two methods of remotely estimating moulin discharge on the Greenland ice sheet
