Conquering the problem of stethoscope contamination will take a small miracle.

(actual size)

Meet the miracle.

Introducing SafeSEAL™ from Doctors Research Group. It's not a cover, but a revolutionary soft diaphragm that will change the way you deal with stethoscope bacteria.

As the rate of nosocomial infections rise, the dangers of cross-contamination can no longer be ignored. And with SafeSEAL's™ unparalleled ease-of-use, getting your medical staff to use them won't take a small miracle either.

SafeSEAL™ is impregnated with an antimicrobial compound that helps prevent the growth and migration of bacteria, yeast, mold and fungus. In fact, SafeSEAL™ kills 99.9% of MRSA (methicillin-resistant staphylococcus aureus) bacteria for up to two weeks.*

But inhibiting cross-contamination isn't the only benefit. SafeSEAL™ is made from a highly sensitive, yet durable non-latex synthetic elastomer, that is designed to be acoustically responsive to high and low frequencies. Plus, it's warm to the touch for better patient comfort.

**Trust SafeSEAL™ to protect your patients.
Simple, Easy, Effective.**

SafeSEAL™ Antimicrobial Soft Diaphragms are available in individual foil packs or a convenient wall mounted unit. Color coding and an easy to follow calendar printed on the box make it easy to remember when to change your SafeSEAL™ each week. Available in Adult, Infant and Pediatric Sizes.

Doctors Research
Group, Inc.

*SafeSEAL diaphragms inoculated at Day 0 and Day 14 with Methicillin Resistant Staphylococcus Aureus (MRSA) and sampled after 24 hours showed a 4.6 log reduction (99.9%) in bacteria count. Antimicrobial Compound was tested at 1% concentration. Standard precautions should be followed, including cleaning of the diaphragms between use. SafeSEAL™ is a trademark of Doctors Research Group. U.S. Patent #5,365,023 and other patents pending.
