

Scopulariopsis Brevicaulis: a mould which liberates arsine from the pigment Paris Green—grown on Oxoid Sabouraud Agar.

The case of the toxic wallpaper

In a damp and dingy green-papered room, a man was suffering from a progressive malaise and little knew that he was being slowly poisoned. Murder?—No. In fact, arsenical gas was being liberated from the green pigment in the paper by the action of a mould growing on it.

Although this particular instance is not taken from our files, it serves to illustrate the diversity of problems which face the Bacteriologist. It is with such problems—as well as in the everyday routine work—that Oxoid Culture Media prove so dependable and reliable and, of course, so convenient.
