*Seed Science Research* is a medium for original articles on the physiology, biochemistry and molecular biology of seeds, covering seed and embryo development, maturation, dormancy, germination, viability, longevity, vigour, reserve mobilization and the early stages of establishment. Papers on ecology,

ecophysiology and applied research (e.g. priming, pelleting, biotechnology) will also be included if they have a sound theoretical base or a high physio-biochemical content and/or relevance. The journal includes review articles, both commissioned and contributed, and letters (see Notes for Authors).

Authors should submit original manuscript and artwork plus two copies to:

Professor M. Black, Division of Biosphere Sciences,  
King's College London, Campden Hill Road, London, W8 7AH UK  
(see Notes for Authors).

Orders and enquiries concerning subscriptions should be sent to:
