JULY 1969

The bird has flown.

Concorde takes wing. And takes us along too.

For the past nine years we have been involved in the project with both Rolls Royce and the British Aircraft Corporation.

BP have produced a unique high performance turbine lubricant.

Shell have carried out an extensive research programme into the fuel requirements.

(When a plane uses 65 tons of fuel in one trans-Atlantic flight you get some idea of the size of the problems that have had to be solved.)

But this is only the first phase of the comprehensive flight test programme before Concorde enters service with the world airlines.

And Shell-Mex and B.P. Ltd. will be with her all the way.

Portrait of a happy marriage

Barometric airspeed indication and servoed digital mach read-out are happily united in this Combined Mach Airspeed Indicator—another contribution by Smiths Industries Aviation Division to clearer and more compact instrumentation. The display includes large 3 digit mach counter, single airspeed pointer and maximum safe operating airspeed (V_{mo}) pointer. Autothrottle coupling facilities and, if required, adjustable speed index 'bugs' can be provided. Variants with alternative mach and

airspeed ranges and metric calibration are available. The instrument has TSO.C46 approval. The comprehensive range of Smiths airspeed displays also includes conventional Mach Airspeed Indicators. These barometric instruments have V_{mo} pointers and autothrottle coupling facilities. Smiths Mach Airspeed Indicators are housed in 3ATI cases, have integral lighting and are being supplied to Boeing for 707 and 737 aircraft.
