

BECOME A LIFE MEMBER AND YOU'LL JOIN PRESTIGIOUS COMPANY

Become a Life Member of Fauna & Flora International to show an extraordinary commitment to an organisation that has been at the forefront of conservation for over 100 years.

Since its inception in 1903 as the world's first international conservation organisation Fauna & Flora International has been working tirelessly for the preservation of plants and animals across the world. For over 100 years Life Members have provided the support and commitment that has helped us to achieve so much, not least key achievements such as:

- Reintroducing the Arabian oryx to the wild
- Establishing the International Gorilla Conservation Programme
- Establishing Vietnam's first locally managed conservation organisation

Collaboration is key to our approach, and wherever possible we work with other global conservation organisations to ensure we are effective and efficient. That's why in 2015 we moved into the David Attenborough Building of the Cambridge Conservation Initiative with several other global conservation groups. Now we are asking you to be part of our wider collaborative work by becoming a Life Member.

As a Life Member you will receive Oryx—The International Journal of Conservation and our annual magazine Fauna & Flora, and you will also be invited to special events, where you can network with some of the world's leading conservationists. You will be joining a select group of supporters who have shown an extraordinary commitment to international conservation.

By joining Fauna & Flora International as a Life Member with a one-off payment of £1,500 you will be making a genuine difference to our conservation work and will forever be part of our global conservation organisation.

Gary Morrisroe/FFI

"I have been a member of Fauna & Flora International since the 1950s... investment in the work of FFI is truly an investment in the future of our planet"

Sir David Attenborough

Cover Conservation is ultimately a social process, and gender—the socially constructed roles and attributes associated with males and females—is a fundamental concept that influences use of natural resources, priorities for conservation, and ability to engage in decision-making about those resources. This issue's special theme on gender and conservation reflects on the role of women and gender in wildlife crime, payments for ecosystem services, sacred forests, and conservation research and practice, examining how more meaningful discussion and consideration of gender issues within conservation research and practice could lead to more effective and equitable outcomes. The cover image—members of a lakeside community recreating the flooded forests around Tonle Sap lake—links this theme to a section focusing on conservation in Cambodia. For the gender and conservation theme, see pp. 801–802, 818–877, and for conservation research in Cambodia, see pp. 878–915. (Photograph © Jeremy Holden/FFI)
