**Irrigation Science** will publish original contributions and short communications reporting the results of irrigation research, including relevant contributions from the plant, soil and atmospheric sciences as well as the analysis of field experimentation. Special emphasis will be given to multi-disciplinary studies dealing with the problems involved in maintaining the long term productivity of irrigated lands and in increasing the efficiency of agricultural water use.

Aspects of particular interest are:

- Physical and chemical aspects of water status and movement in the plant-soil-atmosphere system.
- Physiology of plant growth and yield response to water status.
- Plant-soil-atmosphere and water management in irrigation practice.
- Measurement, modification and control of crop water requirements.
- Salinity and alkalinity control by soil and water management.
- Ecological aspects of irrigated agriculture.
