The Annals of Applied Probability

August 1991

Special Invited Paper

 Loss networks

 Articles

 Diffusion approximation in past dependent models and applications to option pricing PAOLO KIND, ROBERT SH. LIPTSER AND WOLFGANG J. RUNGGALDIER

 On the distribution of leaves in rooted subtrees of recursive trees HOSAM M. MAHMOUD AND R. T. SMYTHE

 Inventory models with continuous, stochastic demands

 SIDNEY BROWNE AND PAUL ZIPKIN

 A limit result respecting graph structure for a fully connected loss network with alternative routing

 JENS LEDET JENSEN AND P. J. HUNT

 Pseudolikelihood for exponential family models of spatial point processes JENS LEDET JENSEN AND JESPER MØLLER

 A new class of random number generators

A new class of random number generators......George Marsaglia and Arif Zaman

Vol. 1

November 1991

Articles

A mean field limit for a lattice caricature of dynamic routing in circuit switched networks......V. Anantharam Estimating variance from high, low and closing prices L. C. G. ROGERS AND S. E. SATCHELL Some limit theorems on distributional patterns of balls in urns SAMUEL KARLIN AND MING-YING LEUNG On the functional central limit theorem for the Ewens sampling formula PETER DONNELLY, THOMAS G. KURTZ AND SIMON TAVARÉ Departures from many queues in seriesPETER W. GLYNN AND WARD WHITT A branching random walk with a barrier J. D. BIGGINS, BORIS D. LUBACHEVSKY, ADAM SHWARTZ AND ALAN WEISS Nonlinear regression of stable random variables CLYDE D. HARDIN, JR., GENNADY SAMORODNITSKY AND MURAD S. TAQQU On the ergodicity of TAR(1) processes......Rong Chen and Ruey S. Tsay All correspondence and submissions for the Annals of Applied Probability should be directed to:

> J. Michael Steel, Editor The Wharton School The University of Pennsylvania Department of Statistics 3010 Steinberg Hall–Dietrich Hall Philadelphia, Pennsylvania 19104-6302, USA (215) 898-9477 E-mail: steele@wharton.upenn.edu

Papers should be submitted in quadruplicate, and authors are encouraged to follow the familiar editorial conventions of the two other IMS *Annals*. In addition to welcoming papers in all the traditional areas of applied probability, the new *Annals* particularly hopes to attract work that develops and deepens the interplay of probability and the fields of computer science, finance, network modeling, and biology.

THE MATHEMATICAL SCIENTIST (TMS)

This publication contains papers on a variety of mathematical topics for the general information and enjoyment of mathematicians, statisticians and computer scientists; it also appeals to workers in any other discipline lending itself to the application of mathematical methods. Readers are encouraged to submit short papers, letters and problems concerned with the theory and application of mathematics, statistics or computing. Material for publication should be presented in a clear and simple style, suitable for an informed but non-specialist mathematical audience, and may be sent to any member of the editorial board:

Editor-in-chief: J. Gani (Australian National University, Canberra)

Editors:

R. Anderssen (CSIRO, Canberra), Rosemary Bailey (Goldsmiths' College, London), J. Blake (University of Birmingham), Paul M. Cohn (University College London), W. Forbes (University of Waterloo), John Gower (Rothamsted Experimental Station, Harpenden), C. C. Heyde (Australian National University, Canberra), K.-H. Hoffmann (Universität Augsburg), A. Konheim (University of California, Santa Barbara), Hilary Ockendon (Mathematical Institute, Oxford), Basil Rennie (Burnside, S. Australia), S. Resnick (Cornell University, Ithaca, NY), G.-C. Rota (Massachusetts Institute of Technology), and R. Stanton (University of Manitoba, Winnipeg).

Each volume consists of two issues distributed in June and December, totalling approximately 128 pages. Volume 16 (1991) costs £8.00 (US\$13.50, \$A. 17.50).

It includes the following contributions:

The mathematics of darts (or where to aim), by C. Atkinson and R. Craster

Embedding procedures for discrete problems in probability, by G. Blom and L. Holst

On harmonic means and variances, by E. A. Catchpole and A. W. Plank

Simulations of enhanced oil recovery, by M. K. Cham and J. R. Blake

Lagrange interpolation polynomials based on equidistant nodes, by T. M. Mills and S. J. Smith

Problems of handling messy field data for engineering decision-making, by E. Moore, J. J. Sharp and L. M. Lye

Double Youden rectangles of size 6×11 , by D. A. Preece

Point processes and Tauberian theory, by S. Resnick

A generalized birthday problem, by D. Sandell

Renewal process proof for the limit of the Markov binomial distribution, by Y. H. Wang and W. J. Bühler

Stochastic modelling of dose-response for single cells in radiation experiments, by G. L. Yang and C. E. Swenberg

Orders and requests for further information should be sent to

Executive Editor, Applied Probability, Department of Probability and Statistics, The University, Sheffield S3 7RH, England.

SUBSCRIPTION RATES

Subscription rates (post free) for the 1991 volume of Advances are as follows:

Subscribers in North, Central and South America, and Australia:

US\$150.00; \$A198.00; £87.00 for libraries and institutions; US\$50.00; \$A66.00; £29.00 for individuals belonging to a recognised scientific society.

All other subscribers:

£87.00 for libraries and institutions;

£29.00 for individuals belonging to a recognised scientific society.

All enquiries about *Advances*, as well as other subscriptions, should be sent to the Executive Editor, Miss M. Hitchcock, Department of Probability and Statistics, The University, Sheffield S3 7RH, England. The price of back numbers varies from volume to volume, and enquiries should be sent to the Executive Editor. Cheques, money orders, etc. should be made out to *Applied Probability*; cheques on U.S., U.K. and Australian banks will be acceptable.

NOTES FOR CONTRIBUTORS

Contributions published in Advances may be of six kinds:

(1) review papers; (2) longer research papers in applied probability, which may include expository material; (3) expository papers on branches of mathematics of interest to probabilists; (4) papers outlining areas in the biological, physical, social and technological sciences in which probability models can usefully be developed; (5) papers in applied probability presented at conferences which do not publish their proceedings; (6) letters to the editor on any appropriate topic in applied probability. (Note: Letters relating specifically to papers which have appeared in the Journal of Applied Probability will continue to be published in the Journal.)

Research papers not exceeding 20 printed pages and short communications are published in the Journal of Applied Probability. The editors may publish accepted papers in either journal, according to the space available, in order to meet the 15-month deadline in publication referred to below.

Submission of papers

Papers submitted to Advances in Applied Probability are considered on the understanding that they have not been published previously and are not under consideration by another publication. Papers will not be reprinted without the written permission of the Trust. It is the policy of Advances not to accept for publication papers which cannot appear in print within 15 months of the date of receipt of the final version. Authors will receive 50 reprints of their papers free, and joint authors a proportional share of this number. Additional reprints will be provided at cost.

Papers should be written in English or French; papers in other languages may be accepted by the editors, but will appear (subject to the author's agreement) in English or French translation in *Advances*. Scripts should be typewritten, using double spacing, and at least one copy should be on one side of the paper only. Each paper should be accompanied by

(i) a short abstract of approximately 4–10 lines giving a non-mathematical description of the subject matter and results;

(ii) a list of keywords detailing the contents for the purpose of computerised information retrieval;

(iii) primary and secondary classifications using the 1991 Mathematics Subject Classification, to be found in the 1990 Annual Index of *Mathematical Reviews*.

Authors are advised to consult *The Author's Guide to the Applied Probability Journals* when preparing papers for submission. A copy of this guide may be obtained on application to the Applied Probability Office.

For efficiency in processing, authors are requested to send three copies of all submissions to the Applied Probability Office in Sheffield, rather than to individual editors. Authors overseas are asked to ensure that their submissions are sent by airmail. The Editor-in-Chief and the Applied Probability Office are in regular contact and full details of all papers submitted are available to Professor Heyde at The Australian National University in Canberra.

Copyright

The copyright of all published papers shall be vested in the Trust. When a paper is accepted for publication, the Trust requests the author(s) to sign a form assigning copyright to the Trust. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of 0.50 per copy, plus .10 per page is paid directly to CCC 27 Congress St., Salem, MA 01970, U.S.A. 0001-8678/91 00.50 + .10.
