

Our new ModuLab MTS is a modular, integrated, software controlled system for testing the electrical properties of a wide range of semiconductor materials.

- Time domain capability includes sequencing of constant level, I-V, and pulse techniques
- Impedance techniques include C-V, capacitance, admittance, Mott-Schottky
- Wide voltage range ± 100 V
- Current from fA to Amps
- Accurate capacitance results
- Temperature control from 5K to 600K
- Compatibility with semiconductor probe stations

Stacks of apps.

Cards on the table: simply the best for semiconductor materials test...

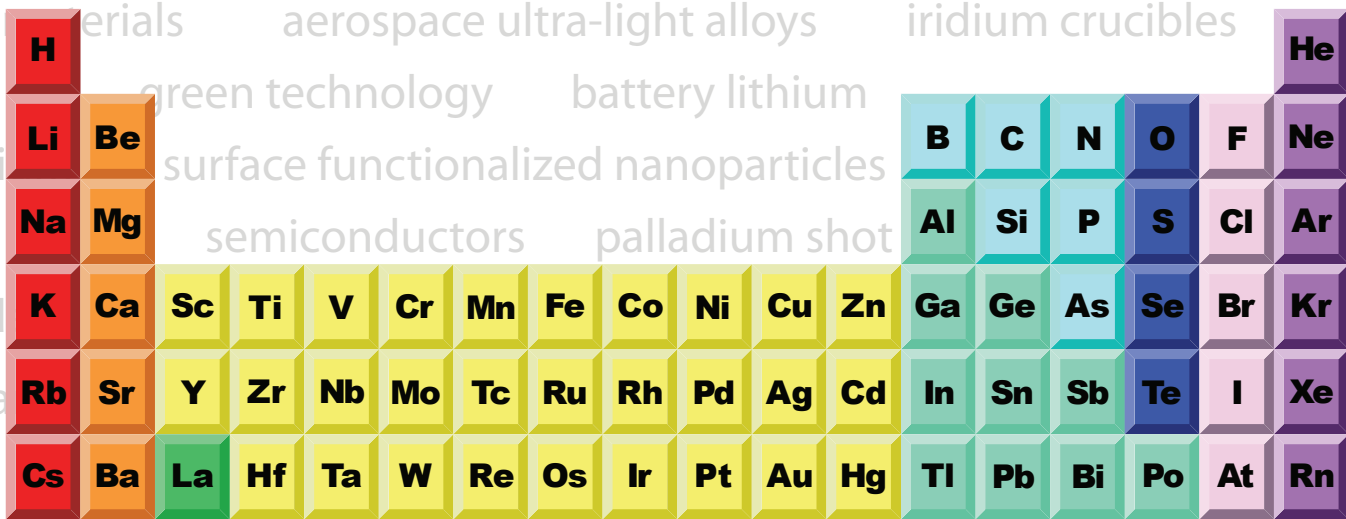

The **ModuLab MTS** materials test system offers unique capabilities for your research into the electrical properties of semiconductor (and other) materials with its integrated time domain, impedance (AC) and temperature control techniques. Contact Solartron today to find out more.
