

## Subscription rates

Subscription rates for volume **48** (2016) of *Advances in Applied Probability* (AAP) are as follows (post free and online access at <http://journals.cambridge.org/apr>). For libraries and institutions: US\$344.00, £222.00 (online only); US\$378.00, £244.00 (online & print). For individuals, US\$130.00, £84.00 (online & print). The subscription rates for volume **53** (2016) of *Journal of Applied Probability*, the companion publication, are the same; for individual subscribers that order both journals at the same time, the combined price is discounted by 10%. Please send all subscription renewals and enquiries to: [subscriptions\\_newyork@cambridge.org](mailto:subscriptions_newyork@cambridge.org) in the Americas and [journals@cambridge.org](mailto:journals@cambridge.org) for the Rest of the World.

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as portable document format (PDF) files, not exceeding 1 Mb, to the email address [submissions\\_japaap@sheffield.ac.uk](mailto:submissions_japaap@sheffield.ac.uk). All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0001–8678/16

**Volume 48**      **Number 2**

- 315 RUSLAN KRENZLER, HANS DADUNA AND SONJA OTTEN. Jackson networks in nonautonomous random environments
- 332 BO H. LINDQVIST, FRANCISCO J. SAMANIEGO AND ARNE B. HUSEBY. On the equivalence of systems of different sizes, with applications to system comparisons
- 349 MICHAEL A. KOURITZIN AND SAMIRA SADEGHI. Marcinkiewicz law of large numbers for outer products of heavy-tailed, long-range dependent data
- 369 JÉRÔME CASSE. Probabilistic cellular automata with general alphabets possessing a Markov chain as an invariant measure
- 392 IKER PEREZ, DAVID HODGE AND HUILING LE. Markov decision process algorithms for wealth allocation problems with defaultable bonds
- 406 JINXIA ZHU AND HAILIANG YANG. Optimal financing and dividend distribution in a general diffusion model with regime switching
- 423 KRISTIAN BUCHARDT. Continuous affine processes: transformations, Markov chains and life insurance
- 443 JI HWAN CHA AND MASSIMILIANO GIORGIO. On a class of multivariate counting processes
- 463 ALEXANDRE BOUMEZOUED. Population viewpoint on Hawkes processes
- 481 ENZO ORSINGER, COSTANTINO RICCIUTI AND BRUNO TOALDO. Population models at stochastic times
- 499 NINGYUAN CHEN AND MARIANA OLVERA-CRAVIOTO. Coupling on weighted branching trees
- 525 FRANÇOIS BACCELLI, HÉCTOR A. CHANG-LARA AND SERGEY FOSS. Shape theorems for Poisson hail on a bivariate ground
- 544 NICOLAS CHENAVIER AND ROSS HEMSLEY. Extremes for the inradius in the Poisson line tessellation
- 574 JAMES BURRIDGE AND RICHARD COWAN. Planar tessellations that have the half-Gilbert structure
- 585 HÜSEYİN ACAN AND PAWEŁ HITCZENKO. On a memory game and preferential attachment graphs
- 610 ILIE GRIGORESCU AND YI-CHING YAO. Maximizing the variance of the time to ruin in a multiplayer game with selection
