

VOLUME 113 SUPPLEMENT 1996

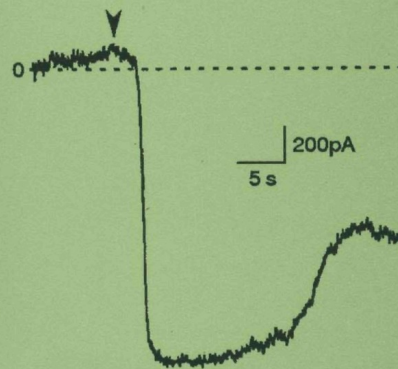

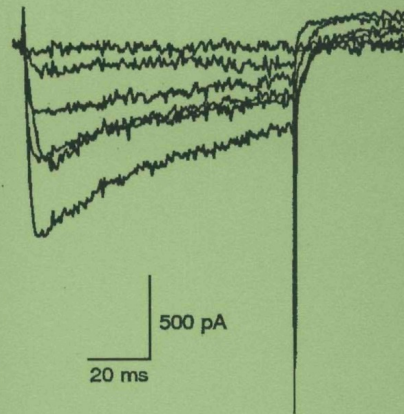

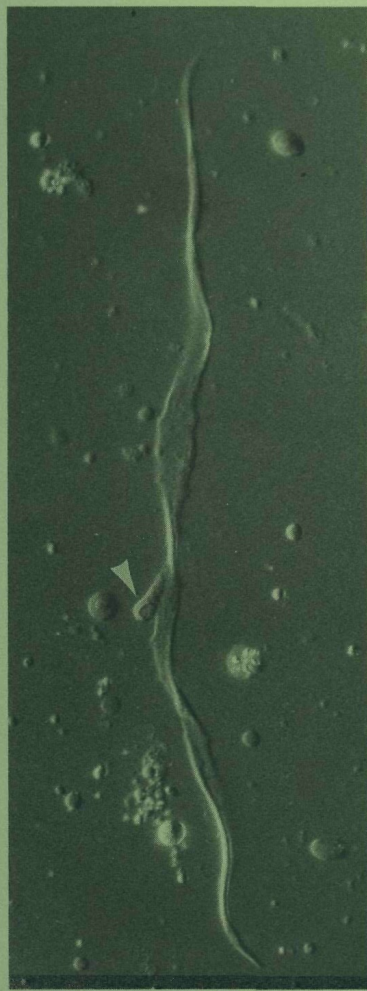

# Parasitology

*Supplement to Parasitology 1996*

## **Molecular biochemistry and physiology of helminth neuromuscular systems**

EDITED BY **D. W. HALTON**

CO-ORDINATING EDITOR **L. H. CHAPPELL**

CAMBRIDGE UNIVERSITY PRESS

**Subscriptions** may be sent to any bookseller or subscription agent or direct to the publisher: Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU. Subscriptions in the USA, Canada and Mexico should be sent to Cambridge University Press, Journals Department, 40 West 20th Street, New York, NY 10011-4211. All orders must be accompanied by payment. The subscription price (excluding VAT) of volumes 112 and 113, 1996 is £292 (US \$540 in the USA, Canada and Mexico), payable in advance, for twelve parts plus supplements; separate parts cost £26 or US \$48 each (plus postage). EU subscribers (outside the UK) who are not registered for VAT should add VAT at their country's rate. VAT registered subscribers should provide their VAT registration number. Japanese prices for institutions (including ASP delivery) are available from Kinokuniya Company Ltd, P.O. Box 55, Chitose, Tokyo 156, Japan. Periodicals postage paid at New York, NY and at additional mailing offices. POSTMASTER: send address changes in USA, Canada and Mexico to *Parasitology*, Cambridge University Press, 110 Midland Avenue, Port Chester, New York, NY 10573-4930.

ISBN 0 521 57637 7

# Contents

<i>List of contributions</i>	S1	Attachment organs	S55
		Neurocytology and ultrastructure	S58
		Glia-like cells	S59
		Synapses and non-synaptic release sites	S60
	S3	Neurocrine (synaptocrine) release	S60
	S3	Paracrine (nonsynaptic) release	S60
	S4	Sense organs	S61
	S7	Neurochemistry	S61
	S8	Acetylcholine	S62
	S11	Serotonin	S62
	S14	Catecholamines	S63
	S14	Histamine	S63
	S14	Glutamate	S63
	S16	$\gamma$ -Amino butyric acid	S64
	S16	Nitric oxide	S64
	S19	Neuropeptides	S64
	S19	Neuronal mapping and co-localization of neuroactive substances	S65
	S23	Neuroactive substances in reproduction and development	S65
	S52	Conclusion	S66
	S52	Acknowledgements	S67
	S52	References	S67
	S35		
<b>Neuropeptides and their evolution</b>	S35	<b>Physiology and pharmacology of turbellarian neuromuscular systems</b>	S73
Summary	S35	Summary	S73
Introduction	S35	Introduction	S73
Evolution of methodologies	S36	Taxonomy of the Turbellaria	S73
Evolution of general concepts	S36	Basic biology and neuroanatomy	S74
Evolutionary origins of regulatory peptides	S37	Behaviour of the Turbellaria	S74
Regulatory peptide systems in higher invertebrates – insects and molluscs	S38	Neuronal physiology	S74
Regulatory peptides in helminths	S39	Muscle anatomy and organization	S77
The discovery of neuropeptide F in flatworms	S39	Neuromuscular pharmacology	S77
Flatworm FMRFamide-related peptides (FaRPs)	S41	Muscle physiology	S78
Nematode neuropeptides – exceptions to the rule?	S43	Conclusions	S79
Summary and future trends	S43	Acknowledgements	S79
References	S43	References	S79
		<b>Neuromuscular physiology and pharmacology of parasitic flatworms</b>	S83
<b>Functional morphology of the platyhelminth nervous system</b>	S47	Summary	S83
Summary	S47	Introduction	S83
Introduction	S47	Anatomy of somatic muscle	S83
Neuroanatomy	S48	Ion channels of somatic muscle	S85
Gross morphology of the nervous system	S48	Receptors on somatic muscle	S86
The brain	S51	Serotonin	S87
The orthogon	S51	Peptides	S88
The main nerve cords	S53	Acetylcholine	S89
The plexuses	S53	Glutamate	S91
The pharyngeal and stomatogastric nervous system	S53	Conclusions	S92
		References	S92

**The motornervous system of *Ascaris*:  
electrophysiology and anatomy of  
the neurons and their control by  
neuromodulators**

Summary	S97
Introduction	S97
Overview of motorneuronal anatomy and physiology: early studies	S97
Properties of individual neurons	S99
Determination of motorneuronal membrane properties	S99
Nature of motorneuronal signalling: small, transient active conductances	S100
Nature of motorneuronal signalling: slow potentials	S101
Nature of motorneuronal signalling: absence of all-or-none spikes	S102
Non-motorneuronal spiking activity: analysis using extracellular recording techniques	S102
Nature of neurotransmission: graded synaptic transmission and tonic release of transmitter	S104
System properties: neuronal interactions and behavioural considerations	S104
Anatomical circuitry	S104
Physiology of motorneuron interactions	S106
Outstanding issues	S107
Pharmacology of neurotransmission	S108
Acetylcholine	S108
Gamma aminobutyric acid (GABA)	S108
Glutamate	S108
GLU transporter	S109
Serotonin	S110
Neuropeptides	S111
Acknowledgements	S113
References	S113

**FMRFamide-related peptides (FaRPs) in  
nematodes: occurrence and  
neuromuscular physiology**

Summary	S119
Introduction: FMRFamide-related peptides (FaRPs)	S119
Peptides in nematodes	S120
Distribution of FMRFamide-related peptides in nematodes	S120
Identification of nematode FaRPs	S121
Isolation and structural characterization	S123
Characterization of nematode FaRP- encoding genes	S123
Physiological activity of FaRPs in nematodes	S123
<i>Ascaris suum</i> peptides	S124
<i>Panagrellus redivivus</i> peptides	S126
<i>Caenorhabditis elegans</i> peptides	S130
Platyhelminth FaRPs	S130
Arthropod FaRPs	S130
Mechanism of action	S130

Nitric oxide involvement in FaRP effects	S130
Nematode G proteins and second messengers	S131
Nematode neuropeptide metabolism	S132
Conclusion and future directions	S132
References	S133

**Electrophysiology of *Ascaris* muscle and  
anti-nematodal drug action**

Summary	S137
Introduction	S137
The anatomy and physiology of the somatic neuromuscular system of <i>Ascaris</i>	S137
The nervous system	S137
The anatomy of somatic muscle	S138
Electrophysiology of somatic muscle	S140
Membrane potential	S140
Permeability of Ca <sup>2+</sup> -dependent Cl <sup>-</sup> channels in the bag membrane and excretion of organic anions	S140
Depolarizing potentials	S143
Acetylcholine	S144
<i>Ascaris</i> muscle has acetylcholine receptors	S144
Pharmacology of the <i>Ascaris</i> nicotinic acetylcholine receptor	S144
The nicotinic anthelmintics	S144
Intracellular potential and conductance effects of nicotinic anthelmintics	S145
Single-channel currents activated by nicotinic anthelmintics	S147
There may be more than one block site in the pores of <i>Ascaris</i> nicotinic channels	S148
Non-nicotinic or 'muscarinic' cholinergic receptors in nematodes	S149
Kostyuk technique for recording voltage- dependent currents from the bag region of the muscle and effects mediated by cholinergic receptors	S149
Resistance to anthelmintics	S149
Pharmacology of the <i>Ascaris</i> GABA receptor	S149
Possible therapeutic uses of GABA antagonists	S150
Piperazine	S150
The avermectin receptor	S151
Effect of glutamate	S153
Effect of milbemycin D	S153
Conclusion	S153
Acknowledgements	S154
References	S154
<b>Metabolism and inactivation of neurotransmitters in nematodes</b>	S157
Summary	S157
Introduction	S157
Metabolic inactivation	S157
Inactivation of acetylcholine	S157
Metabolism and inactivation of biogenic amines	S158

Which biogenic amines are functional in nematodes?		Conclusions	S187
Metabolism of biogenic amines	S159	Acknowledgements	S188
Neuropeptide metabolism	S161	References	S188
Neurotransmitter uptake	S165	<b>Molecular biology and electrophysiology of glutamate-gated chloride channels of invertebrates</b>	S191
Biochemical studies of uptake	S165	Summary	S191
Neurotransmitter transporter gene families	S165	General background	S191
The sodium- and chloride-dependent neurotransmitter gene family	S165	Electrophysiological and pharmacological properties of glutamate-gated chloride channels	S191
The glutamate transporter gene family	S165	Anthropods	S191
The vesicular amine transporter gene family	S165	Nematodes	S192
Sodium- and chloride-dependent neurotransmitter transporters	S166	Molecular biology and expression of cloned glutamate-gated chloride channels	S193
Cloning and characterization of neurotransmitter transporters	S166	Conclusions	S197
Pharmacology of neurotransmitter transporters	S166	Acknowledgements	S198
Neurotransmitter uptake in helminths	S167	References	S198
Serotonin uptake in filarial worms	S167	<b>Pharmacology of anthelmintic resistance</b>	S201
GABA uptake in <i>Ascaris</i>	S167	Summary	S201
Serotonin uptake in <i>C. elegans</i>	S168	Introduction	S201
<i>C. elegans</i> as a model system for studying neurotransmitter transporters	S168	Anthelmintics	S201
Cloning of neurotransmitter transporter genes	S168	Development of resistance	S202
Cloning of vesicular amine transporter	S168	Definitions and measurement of resistance	S202
Cloning of a glutamate transporter	S168	Research on anthelmintic resistance	S203
Cloning of a sodium- and chloride-dependent transporter	S168	Imidothiazole (Levamisole) resistance	S204
Concluding remarks	S169	<i>In vivo</i> pharmacology of the imidothiazoles	S204
Acknowledgements	S169	<i>In vitro</i> assays for LEV resistance	S205
References	S169	LEV resistance and the physiology of parasitic stages	S205
<b>Molecular cloning and <i>in vitro</i> expression of <i>C. elegans</i> and parasitic nematode ionotropic receptors</b>	S175	Ligand binding and LEV resistance	S206
Summary	S175	Genetics of LEV resistance	S206
Introduction	S175	Mechanisms of resistance to LEV	S207
<i>C. elegans</i> , a model for ionotropic receptors	S175	LEV resistance in <i>C. elegans</i>	S207
<i>C. elegans</i> ionotropic receptors	S177	Macrocyclic lactone (ivermectin) resistance	S208
Nicotinic acetylcholine receptors	S177	IVM resistance <i>in vivo</i> and <i>in vitro</i>	S208
Molecular cloning	S178	Binding of IVM	S209
Isolation of genes for parasitic nematodes	S178	Genetics of IVM resistance	S210
<i>In vivo</i> functional studies	S180	Mechanisms of IVM resistance	S210
Direct localization of nAChR subunit gene expression	S180	IVM resistance in <i>C. elegans</i>	S210
Reverse genetics	S180	Acetylcholinesterases (naphthalophos) resistance	S211
Other approaches to identifying nAChR function	S181	Piperazine	S211
Sequence comparison of nematode nAChR sequences	S182	Schistosomicides	S211
Functional expression	S183	Study of parasitic helminths	S211
L-Glutamate receptors (L-GluRs)	S185	Conclusions	S213
GABA receptors (GABARs) and other putative amino acid receptors	S186	Acknowledgements	S213
Ryanodine receptors (RyRs)	S187	References	S213
Inositol 1,4,5 triphosphate receptors	S187	<b>Prospects for rational approaches to anthelmintic discovery</b>	S217
		Summary	S217
		Introduction	S217

Drug design	S218	Targets derived from pharmacology	S222
Mechanism-based screening	S218	GABA receptors	S222
Enzyme inhibitors	S218	Acetylcholine receptors	S224
Receptor binding	S218	Glutamate receptors	S225
Protein: protein and protein: DNA interactions	S219	Targets derived from physiology	S225
Sources of compounds	S219	Ion channels	S225
Compound collections	S220	Serotonin receptors	S227
Electronic libraries	S220	Glycine receptors	S228
Combinatorial libraries	S220	Neuropeptides – peptide receptors	S228
Natural products – plants and animals	S220	– processing enzymes	S229
– microbial fermentations	S220	Targets derived from drugs with unknown receptors	S230
Examples of mechanism-based anthelmintic discovery	S221	Paraherquamide	S230
Recombinant microorganism-based screens	S221	PF1022A	S230
Molecular modelling: schistosome cysteine protease inhibitors	S222	Potential targets identified through basic research	S231
Potential anthelmintic targets in neuromuscular systems	S222	The nematode pharynx	S231
		Amphid function	S231
		Contributions of <i>C. elegans</i>	S232
		References	S232
