

*An important new title*

## **Natural Philosophy through the Eighteenth Century**

Edited by Allan Ferguson

This collection of articles on science and engineering was published first in 1948 to celebrate the hundred and fifty years in which the *Philosophical Magazine* has served the scientific community. The interest in the history of science now shown in schools and universities has led to this reprint. We believe that many of these articles would form an admirable introduction to more detailed study.

### **Contents**

The Philosophical Magazine; Astronomy through the Eighteenth Century; Physics in the Eighteenth Century; Chemistry through the Eighteenth Century; Mathematics through the Eighteenth Century; Engineering and Invention in the Eighteenth Century; Scientific Instruments in the Eighteenth Century; The Scientific Periodical from 1665 to 1798; Scientific Societies to the End of the Eighteenth Century; The Teaching of the Physical Sciences at the End of the Eighteenth Century.

# Natural Science Books in English

DAVID M. KNIGHT

Early books on science may be beautiful, rare, historically important, they may be excellent reading for their own sake, or they may combine two or more of these virtues. Whatever the bibliophile's point of view, there is no doubt that these books are being increasingly collected today. In this survey Dr. David M. Knight, of Durham University, provides a remarkably comprehensive account of all the significant scientific works which have appeared in English during the three hundred years from, roughly, 1600 to 1900.

The subject is so wide a one that Dr. Knight's success in covering it comprehensively and readably is the more remarkable.

Extended bibliographies follow each chapter.

**BATSFORD**

## **Medieval Chronicles and the Rotation of the Earth**

**Robert R. Newton**

Most theories of the motions of the earth and moon are based on the assumption that these characteristics are constant. By studying the ancient observations of professional astronomers, Dr. Newton developed the hypothesis that factors altering the motions of the earth and moon changed suddenly around A.D. 700. In *Medieval Chronicles and the Rotation of the Earth* he further tests this theory by compiling and evaluating a large body of observations of solar eclipses noted by European annalists and chroniclers from A.D. 400 to A.D. 1200. **£6.75**

## **Genetics and American Society**

**Kenneth M. Ludmerer**

The interaction between science and society is complex, often subtle, and sometimes indirect. Kenneth Ludmerer examines one of the most fascinating aspects of the science and society interface: the American eugenics movement. The movement began in the early 1900s as a sincere attempt to encourage survival of the 'best' or 'healthiest' inheritable traits among human beings. Although its original intentions may have been honest, the movement soon took on strong racist and nationalistic overtones. The author describes its role in the enactment of eugenic sterilization measures and in the Immigration Restriction Act of 1924. **£4.50**

**The Johns Hopkins University Press**

2-4 Brook Street London W1

## **Ernst Mach: His Life, Work, and Influence**

**John T. Blackmore**

A wide-ranging biography of the Austrian physicist and philosopher Ernst Mach (1838-1916). Though perhaps best known for his work on shock waves (Mach numbers), Mach made significant contributions in many fields. His attack on Newton's physics influenced Einstein; he made the first scientific investigation of Gestalt phenomena (1861); he discovered optical inhibitory impressions (1865; Mach bands); and he was the first to relate dizziness and 'motor sensations' to the inertial movement of liquid in the inner ear. His philosophical ideas influenced the 'neutral monism' of William James and Bertrand Russell and had a decisive impact on the development of the 'Vienna Circle' and logical positivism. *Illustrated*. **£7.65**

## **The Triumph of the Darwinian Method**

**Michael T. Ghiselin**

'Unquestionably one of the very best (books) on Darwin and his work.'  
*Science*

'Ghiselin has carefully analysed all of Darwin's published writings in the context of current scientific knowledge and present-day understanding of the nature of science. . . Michael Ghiselin has not written an uncontroversial book . . . but it is a book that needed to be written and should be read.' *Systematic Zoology*. *Paperback*. **£1.50**

**University of California Press**

## **Changing Perspectives in the History of Science**

Edited by **Mikulás Teich** and **Robert Young**

In this magnificent volume twenty of the world's leading historians of science have come together to honour Joseph Needham, Master of Gonville and Caius College, Cambridge. Yet this is much more than a *Festschrift*. It charts new lines of development, and offers a number of original contributions of importance in their own right.

December about **£8.00 net**

## **The Organisation of Science in England**

**D. S. L. Cardwell**

Until the 18th century science and technology in Britain had progressed largely through the efforts of amateurs working on their own. In this book Donald Cardwell describes the development towards organized professionalism which prevailed by the end of the 19th century. This is a revised edition of a classic study.

**£2.80 net cased £1.25 net paperback**

## **Technology, Science and History**

**D. S. L. Cardwell**

An excellent, lucidly written history of western mechanical technology from medieval times to the present day. It outlines major achievements, emphasizing the relationship between scientific discoveries and technological inventions.

## Galileo's Intellectual Revolution

William R. Shea

William Shea has provided an outstanding contribution to Galilean studies, dealing with the central period of Galileo's work and following the evolution of the sun-centred view of the universe through the mind of its principal advocate. The main theme of the book is the method Galileo actually used in approaching and examining scientific problems, and the historical context in which that method developed.

**Macmillan**

The first complete survey of an important branch of medicine

# HISTORY OF PHYSIOLOGY

by KARL E. ROTHSCUH

Edited and translated by Gunter B. Risse, M.D., Ph.D.  
Chairman, Dept. of the History of Medicine  
The University of Wisconsin Medical School

448 pp. cloth \$21.50

The author's guiding "motif" is the evolution and transmission of physiological thought and the consequent changes in the concept behind the word "physiology".

*It is a work which bridges the wide gap existing between natural science on the one hand and humanities and social science on the other.*

The book is full of *useful information, skillfully culled* from accurate authorities, *well digested and admirably arranged* covering the entire time span from antiquity to the twentieth century.

The books' usefulness *has been greatly enhanced* by the inclusion of an up-to-date bibliography, including articles and doctoral dissertations not usually listed.

## MULTIPLE VOLUME SETS:

**BAAS—History of Medicine**  
2 vols. 1176 pp. Original edition 1889, reprint 1971 \$35.00  
The book has long been recognized as one of the very few definitive volumes on the subject. Since its original publication in Stuttgart in 1876, to its English translation by H. E. Handerson in 1889, it stands alone for its coverage and scope. Even the publication of later works has not dimmed the usefulness of this classic.

**SYKES—Essays on the First Hundred Years of Anaesthesia Volume I & II**  
448 pp. Original edition 1961, reprint 1972 \$22.50

A collection of fascinating essays by an author who has clearly devoted immense energy and enthusiasm to the task of unravelling fact from fiction in the many accounts of the early days of anaesthesia. The result is not a dry history but a vivid word-picture of the giants of the past with their failings as well as their virtues described with frankness, gusto, and humor.

**JACOBUS—Documents on Medical Anthropology**  
912 pp. 6 by 9 2 volumes  
Original edition 1898, reprint 1972 \$35.00  
A fascinating insight into early sex investigation

## **Leibniz and Dynamics**

**PIERRE COSTABEL**

Reproduces two previously unpublished texts of Leibniz, dating from 1692 and dealing with mechanics. The author's researches have enabled him to give an account of the difficulties experienced by Leibniz in the French intellectual circles of his time.

About £2.90

## **The Astronomical Revolution**

Copernicus, Kepler, Borelli

**ALEXANDRE KOYRÉ**

Traces the development of the revolution which so drastically altered man's view of the universe in the 16th and 17th centuries. Where possible the author allows the astronomers to speak for themselves by using their own writings.

About £6.50

## **The Cosmology of Giordano Bruno**

**PAUL-HENRI MICHEL**

Burnt as a heretic in 1589, Bruno has remained a shadowy figure; even today, his philosophical system is rarely explored. This book outlines Bruno's cosmology, taking in order the recurring motif of the dialogues and poems.

About £3.90

## THE BRITISH SOCIETY FOR THE HISTORY OF SCIENCE

THE objects of the Society are to further the study of the history of science, by holding meetings for the reading and discussion of papers, and by facilitating the publication of relevant material.

*The British Journal for the History of Science* is the official organ of the Society.

There will generally be a Summer meeting, a Winter meeting, and an Easter meeting of the Society. It is intended that additional meetings be arranged for specific occasions such as important anniversaries.

Membership is open to all persons approved by the Council of the Society, and elected at an Ordinary Meeting. The annual subscription is at present £2·50 (for Students £1·50) and includes a free issue of the Society's Journal, which appears in June and December each year.

Those who wish to join the Society should write to the Assistant Secretary, British Society for the History of Science, 47 Belgrave Square, London S.W.1.

Papers for inclusion in the Journal should be submitted to the Hon. Editor, Dr R. Fox, Department of History, University of Lancaster, Bailrigg, Lancaster, from whom instructions may be obtained concerning the presentation and documentation of papers. All communications on editorial matters, and books for review, should be addressed to the Hon. Editor.

Particulars regarding advertising in the Journal may be obtained from the Assistant Secretary, B.S.H.S., 47 Belgrave Square, London S.W.1.

*The British Journal for the History of Science* is published by the Society. Four parts constitute one Volume; each part contains approximately 100 pages. The cover of each issue has a consecutive number for ease of collation in subsequent binding, e.g. No. 16 is numbered: Vol. iv Part iv No. 16, and No. 17 is: Vol. v Part i No. 17.

Order Forms, with lists of contents of Parts already published, are obtainable from: *British Journal for the History of Science*, HEADLEY BROTHERS LTD., ASHFORD, KENT, ENGLAND, to whom orders for the Journal should be sent.

Whole Cloth Binding Cases lettered in Gold on spine and particulars of binding costs may also be obtained from HEADLEY BROTHERS LTD.
