

**CAMBRIDGE**

# Genetical Research

**An essential journal for biology  
library collections**

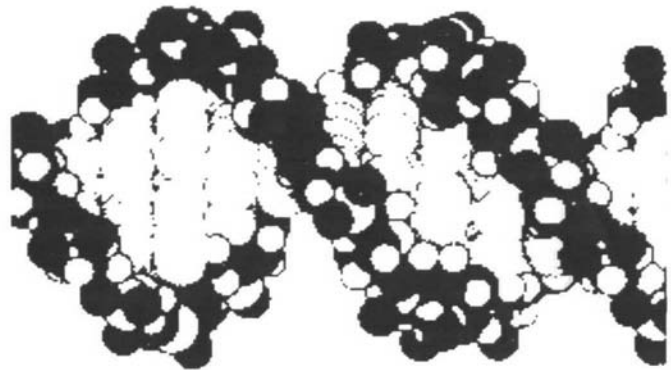

Edited by E. C. R. Reeve, D. J. Finnegan & T. F. C. MacKay

Genetical Research is a prestigious, well-established journal which publishes original work of high quality and wide interest on all aspects of genetics with a particularly strong interest in the molecular genetics of the mouse and *Drosophila*. Other major interests include population and quantitative genetics (both theoretical and experimental studies), and the genetics of development. A book review section gives informed opinion on some of the most recent publications in the field.

## Essential reading

Published by Cambridge University Press, Genetical Research is a valued means of communication between geneticists. The breadth and quality of its papers make it invaluable to:

- ◆ professional geneticists
- ◆ molecular biologists
- ◆ plant breeders
- ◆ animal breeders
- ◆ medical scientists
- ◆ biologists involved in evolutionary and developmental studies

## Benefit from...

- ◆ Excellent reputation - a long-established journal of international standing
- ◆ Original scientific papers - by leading authors
- ◆ High standards - an international group of editors and editorial board ensures the highest standard of work from around the world
- ◆ Superb design - designed for legibility in a double-column format
- ◆ Book reviews - for advice on the latest relevant publications in your field
- ◆ Excellent half-tone reproduction

## Subscriptions

Genetical Research (ISSN 0016-6723) is published six times a year. Volumes 63-64 (1994) are available at £155 or £78 for members of the Genetical Society.

The leading journal in the field ...

## Journal of Anatomy

### A journal of descriptive and experimental morphology

Editor: P. K. Thomas, Department of Neurosciences, Royal Free Hospital School of Medicine, Rowland Hill Street, London NW3 2PF, UK

#### Essential for:

- Anatomists •Zoologists •Cell Biologists •Veterinary Surgeons
- Dental Research Workers •Surgeons •Anthropologists
- Embryologists •Neuroscientists

#### Why you should read Journal of Anatomy

- Very high reputation
- The main journal of general anatomy, including ultrastructure, anthropology, comparative anatomy and experimental morphology
- Extensive book review section
- High quality photographs and general production standards
- Rapid publication time

#### Coverage

Now in a larger American A4 format to permit better reproduction, *Journal of Anatomy* continues to publish original work that advances the study of the structure, mechanical functioning and development of man and animals. At the same time its scope has been enlarged to give greater prominence to experimental morphology. Papers on experimental pathology and also human and veterinary studies on disease states are covered where they contribute to an understanding of the development and maintenance of normal structure and function. Occasional topical and authoritative review papers are also included, as are Symposia based on presentations to the Anatomical Society of Great Britain and Ireland.

#### New Sections

Short reports taking the form of brief preliminary research findings, technical innovations, short descriptions of interesting cases or anomalies, etc. are a popular recent addition to the journal's contents. An Announcements Section listing forthcoming meetings and courses is also included. Those wishing to have items included should send information to the Editor as far ahead of the event as feasible.

The Book Reviews section continues to cover important titles soon after they are published so as to keep readers informed of the latest publications in their field. There is also a Correspondence section which includes comments on previously published papers or on topics of current interest.

#### Colour figures

Colour figures will now be reproduced free of charge if, in the opinion of the Editor, they are considered essential.

#### Recent articles

##### Reviews

FRACKOWIAK RSJ, FRISTON KJ Functional neuroanatomy of the human brain: positron emission tomography – a new neuroanatomical technique

COLETTA PL, SHIMELD SM, SHARPE PT The molecular anatomy of Hox gene expression

UNSICKER K The chromaffin cell: paradigm in cell, developmental and growth factor biology

VERHOFSTAD AAJ Kinetics of adrenal medullary cells

##### Papers

McMENAMIN PG, KRAUSE WJ Development of the eye in the North American opossum

DIXON MJ, ROBINSON V, WHITE A, FERGUSON MWJ Monoclonal antibodies recognising stage and region specific epitopes in embryonic mouse palatal epithelial cells

FINDLATER GS, McDOUGALL RD, KAUFMAN MH Eyelid development, fusion and subsequent reopening in the mouse

GORDON L, POLAK JM, MOSCOSO GJ, SMITH A, KUHN DM, WHARTON J Development of the peptidergic innervation of human heart

BRECKON JJW, HEMBRY RM, REYNOLDS JR, MEIKLE MC Regional and temporal changes in the synthesis of matrix metalloproteinases and TIMP-1 during development of the rabbit mandibular condyle

#### Subscriptions

*Journal of Anatomy* (ISSN 0021-8782) published six times a year in February, April, June, August & December. Volume 184-185, 1994 is available at £332.

## Instructions to Authors

**Zygote** will publish original papers on all aspects of early development from gametogenesis to gastrulation. Studies on plants, invertebrates, lower vertebrates, mammals and humans at the molecular and cellular levels will be accepted. Topics include gametogenesis, fertilisation, sperm-egg interaction, activation of gametes, polarity in oocytes and zygotes, cell cycle control, cleavage, cell-cell interactions, and the generation of primary cell lineages. Review articles, short communications and News and Views Commentaries are also welcomed.

To submit a manuscript, send three complete copies, including figures and illustrations to Brian Dale, Editor-in-Chief, *Zygote*, Stazione Zoologica, Villa Comunale, Naples 80121, Italy. Telephone 39 81 5833233, Fax 39 81 764 1355.

There is no formal restriction on length; however, original articles and reviews of less than 15000 words are likely to appear sooner than longer ones. Short communications should not exceed 1500 words and News and Views Commentaries 500 words.

**Manuscripts** should be organised as follows: Title page (with full names and addresses of all authors, a running headline of up to 35 characters, and a contact address with telephone and fax numbers), an Abstract of not more than 250 words followed by 5 Keywords, Introduction, Materials and Methods, Results, Discussion (combined Results and Discussion may be used for short papers), Acknowledgements, References, Endnotes, Tables and Figure Legends.

Type double-spaced throughout on one side only and number all pages consecutively. Following acceptance authors are encouraged to submit their final revised version of the paper on a personal computer disc together with one hard copy version. Indicate the type of computer and software used. Discs will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's disc proves unusable.

Manuscripts should be prepared using SI units.

**Figures** should be numbered consecutively as they appear in the text. Mark each figure with the first author's name and figure number on the reverse, and indicate its orientation

Any indication of features of special interest should also be included. Authors should submit three copies of each illustration. Figures should be drawn or produced by computer to about twice the final size. Wherever possible they will be reproduced with the author's original lettering. Photographs should be submitted with proposed reduction or magnification indicated, when relevant, by a scale line on, or beside, the illustration. The places for insertion into the text should be indicated in the text as 'Fig. 1' etc, and in the margin of the typescript for insertion. Legends for all illustrations should be typed together, separately from the main text. A charge will be made for colour photograph reproduction.

**Tables** with concise headings should be typed on separate sheets and numbered consecutively. Each table must have a text reference, in the form 'Table 1' etc. Indicate where tables are to be placed by means of a note in the margin.

**Reference** should be cited in the text as "Conklin (1905) showed" or "as shown (Conklin, 1905)". For papers with three or more authors use "*et al.*". A full list of references in alphabetical order should be given at the end of the text: surname of author and initials; year of publication (in parentheses); title of paper; journal or book name (the former being abbreviated in accordance with the World List of Scientific Periodicals); volume number; first and last page of the reference. For books and conference proceedings, place of publication and publisher (and editor(s) if appropriate) should be included.

**Proofs** will be sent to the author for checking. Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

**25 offprints** of each article will be supplied free to each first named author. Extra offprints may be purchased from the publisher if ordered at proof stage.

Submission of a paper will be taken to imply that it is unpublished and it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher.

# Zygote

The Biology of Gametes and Early Embryos

Volume 2 Issue 2 May 1994

## Contents

- In vitro* development of morulae from immature caprine oocytes  
*Levent Keskintepe, Gamal M. Darwish, Abdelmoneim I. Younis and Benjamin G. Brackett* 97
- Cytochalasin B does not block sperm penetration into denuded starfish oocytes  
*Keiichiro Kyosuka and Kenzi Osanai* 103
- Confocal microscopy of F-actin distribution in *Xenopus* oocytes  
*Amy D. Roeder and David L. Gard* 111
- In vitro* fertilisation of maize by single egg and sperm cell protoplast fusion mediated by high calcium and high pH  
*Erhard Kranz and Horst Lörz* 125
- Sperm entry into fertilised mouse eggs  
*Darek Maluchnik and Ewa Borsuk* 129
- Human cumulus cell complexes studied *in vitro* by light microscopy and scanning electron microscopy  
*Sian Kennedy, Marjorie A. England and Carla Mills* 133
- Sperm-egg fusion in the sea urchin is blocked in  $Mg^{2-}$ -free seawater  
*Hideo Mohri, Yukihisa Hamaguchi, Miyako S. Hamagushi, Kiyoshi Sano, Hideki Shirakawa, Ken Nakada and Shunichi Miyazaki* 149
- A unique expression pattern for a sperm membrane protein during sea urchin spermatogenesis  
*Rita D. Ward, Lisa M. Mendoza, Gary W. Moy, Victor D. Vacquier and David Nishioka* 159
- Association of cumulus-oocyte complexes with the intrafollicular levels of a blood protein in *Bubalus bubalis*  
*R. Talevi, P. Bergamo, G. Sansone, A. Savarese, P. Venditti and P. Abrescia* 167
