The Life of Mammals

J. Z. YOUNG

'The book is the best existing introduction, for zoological and medical students, to the main facts and principles of mammalian organisation ; and it is a reminder of the astonishing advances in our knowledge and understanding of the mammalian (and human) body which have been made during the past half-century. I am sure that many professional biologists and medical scientists will share my feelings of admiring gratitude to its author... His attempt to formulate biological facts and principles in terms of an information language will certainly be a stimulus to biologists and philosophers ; and his book as a whole will assuredly remain for many years the fullest presentation of the marvellous organisation of mammalian structure and function.' Face to face with the King of Beasts

In the Kruger National Park you can photograph from the driving seat of your car not only lions, but elephants, giraffes, hippo, crocodiles, baboons and all the other denizens of the African bush. For this is one of the world's greatest wild animal reserves, an 8,000 square mile sanctuary. Then there are the Hluhwe Game Reserve in Natal, where the rare white rhino roams, and a number of other large game reserves. No other country offers the animal lover such opportunities to study wild life in its natural setting—as, of course, no other country offers such glorious sunshine and scenery. Every Thursday afternoon at 4.0 a Mailship sails from Southampton to the sunshine, scenery and thrills of South Africa.
