# The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY  
WALTER HOWARTH

ASSISTANT EDITOR  
G. H. BATEMAN

WITH THE COLLABORATION OF  
V. E. NEGUS      R. G. MACBETH

1. Original Articles are accepted on the condition that they have not been published elsewhere.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks are provided free up to the limit of £5 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.

Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS LTD., 109 Kingsway London, WC2.

5. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS LTD., 109 Kingsway London, WC2.

8. The annual subscription is three guineas sterling (U.S.A. \$10) post free, and is payable in advance.

9. Single copies will be on sale at 7s. 6d. each; copies of parts up to Vol. LXIII may be purchased at 4s. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS LTD., 109 KINGSWAY LONDON, WC2.

#### *United States of America*

Orders for this *Journal* may be sent through local bookseller, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS LTD. 109 KINGSWAY LONDON, WC2, England.

**Broad spectrum antibiotic**

**TYROSOLVEN**

The word "antibiotic" was first used in 1889. Vuillemin, introducing it, said: "The conception is so simple that no one has ever thought of giving it a name". Since then, antibiotics have been produced from fungi, lichens, algae and bacteria. An outstanding member of the bacterial group is *tyrothricin*, which forms the basis of TYROSOLVEN antibiotic lozenges. It is effective against a wide spectrum of oral bacteria, and relieves superficial mouth and throat infections.

**ACTIVE CONSTITUENTS:**  
*Tyrothricin 1 mg., benzocaine 5 mg.*

**PACKING:**  
*Packs of 20 lozenges and dispensing pack of 250 not subject to Purchase Tax.*

**Tyrosolven**

*No Warner preparation has ever been advertised to the public.*  
WILLIAM R. WARNER & Co. Ltd.,  
Power Road, London, W.A.

**Two  
better  
than  
one**

Side by side, the antibiotics gramicidin and polymyxin B cover both Gram-negative and Gram-positive pathogens of the upper respiratory tract. Because they are so rarely used systemically there is little risk of jeopardizing the treatment of subsequent grave systemic infections.

**NEW** *in upper respiratory tract infections*

**PRINEXIN** *In 15 ml. bottles,  
with dropper*

*Gramicidin, 0.005 per cent.  
Polymyxin B sulphate, 500 i.u. per ml.  
Thenylpyramine hydrochloride, 0.2 per cent.  
in isotonic solution of hydroxyamphetamine  
hydrobromide ('Paredrinex'), 1 per cent.*

# Nasal Preparations

With a wide range of uses

## 'SULFEX'

sulphathiazole with the exceptionally effective vasoconstrictor 'Paredrinex', is of great value in acute infections.

## 'PENDEX'

penicillin with 'Paredrinex'. A powerful weapon against many established infections, particularly those involving the sinuses.

## 'BENZEDRINE' INHALER

A reliable and convenient presentation of a highly efficient vasoconstrictor for the relief of congestion on all occasions.

For cost to N.H.S., please see M. & J. list of costs dated January, 1955

**SMITH KLINE & FRENCH INTERNATIONAL CO.**

## PETERS AUDIOMETERS

The SPD/2 Clinic Audiometer (illustrated) and the simpler SPD/3 Consulting Audiometer combine the advantages of both continuous and fixed frequency instruments. They each provide a continuous frequency range with continuous threshold compensation so that all hearing loss readings for air and bone conduction at any desired frequency are taken from the same zero reference level. In addition the continuous variability of the attenuator, makes it completely silent.

The Clinic Audiometer incorporates facilities for performing almost all known audiometric tests while the Consulting Audiometer fulfils normal clinical requirements.

Speech audiometric accessories and a Peepshow for the testing of young children are available for both instruments. Please write for a descriptive brochure.

**THE  
HALLPIKE-BLACKMORE  
MONOCULAR  
EAR MICROSCOPE\***

Pat. appl. for

**THIS** new instrument represents an important contribution to otology. It facilitates accurate clinical diagnosis and operative work of high precision.

- Intense light from 12 watt, silvered, pre-centred lamp.
- Unique dazzle-free optical system provides a critically defined image of the entire tympanic membrane at optimum  $\times 6$  magnification.
- Variable field of view controlled by iris diaphragm in eyepiece to ensure total exclusion of reflexions from speculum walls.
- Ample space for insertion of operating instruments.
- Complete in carrying case with built-in transformer to permit use of the instrument on ward rounds, in consulting-rooms or theatre.

## AMPLIVOX MODEL 61 THE CLINICAL AUDIOMETER OF INTERNATIONAL REPUTE

"Messrs. Amplivox were among the first firms to produce an audiometer in this country, and their larger model is one of the best instruments of the kind now made in the world at a competitive price."—The LANCET, 23-12-50.

- Eleven exact test frequencies 125-12,000 c.p.s.
- Simplified hearing loss dial. The same set of figures is read for both bone and air conduction at all frequencies, and for speech.
- Bone conduction tests can be made from 125-4,000 c.p.s.
- Masking Tone calibrated in decibels, permitting accurate control of masking.
- Double Air receivers enable test tones to be switched instantly from ear to ear.
- Speech test circuit monitors speech level, permitting accurate measurement of hearing loss for speech.
- Loudness Balance Control establishes presence of recruitment in monaural deafness.
- Automatic voltage compensator.

Recruitment Test Set accessory establishes presence of recruitment by amplitude modulation, enabling each ear to be tested independently.

Speech Turntable, English made P.B. and Harvard Spondee Records available.

Full details are available from the manufacturers who will gladly arrange demonstrations if required.
