

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by *Robotica* should be submitted electronically, using the Manuscript Central System, via <http://mc.manuscriptcentral.com/cup/robotica>. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other file types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (robotica@cambridge.org) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However,

most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972);
C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume **42** Part **3** March **2024**

Robust control and experimental validation of trajectory tracking for permanent magnet linear motors based on constraint-following under uncertainty Shengchao Zhen, Chenghui Huang, Xiaoli Liu and Ye-Hwa Chen	625
FBI-RRT: a path planning algorithm for manipulators with heuristic node expansion Guangzhou Xiao, Lixian Zhang, Tong Wu, Yuejiang Han, Yihang Ding and Chengzhe Han	644
Mechanism design and dynamic switching modal control of the wheel-legged separation quadruped robot Jiandong Cao, Jinzhu Zhang, Tao Wang, Jiahao Meng, Senlin Li and Miao Li	660
BA-LIOM: tightly coupled laser-inertial odometry and mapping with bundle adjustment Ruyi Li, Xuebo Zhang, Shiyong Zhang, Jing Yuan, Hui Liu and Songyang Wu	684
A transformable wheel-spoke-paddle hybrid amphibious robot Yikai Ge, Feng Gao and Weixing Chen	701
Kinematic calibration and feedforward control of a heavy-load manipulator using parameters optimization by an ant colony algorithm Xinpei Wang, Lingbo Xie, Mian Jiang, Kuanfang He and Yong Chen	728
Tailoring the motion planning of humanoids in complex arena: a regression-firefly-based approach Chinmaya Sahu, Dayal R. Parhi, Manoj Kumar Muni and Saurabh Sameer Kamat	757
ShakingBot: dynamic manipulation for bagging Ningquan Gu, Zhizhong Zhang, Ruhan He and Lianqing Yu	775
Development and implementation of a new approach for posture control of a hexapod robot to walk in irregular terrains Joana Coelho, Bruno Dias, Gil Lopes, Fernando Ribeiro and Paulo Flores	792
Design, modeling, and control of a novel soft-rigid knee joint robot for assisting motion Yinan Li, Yuxuan Wang, Shaoke Yuan and Yanqiong Fei	817
Kinematics inverse solution of assembly robot based on improved particle swarm optimization Shixiong Zhang, Ang Li, Jianxin Ren and Ruilong Ren	833
Collision avoidance trajectory planning for a dual-robot system: using a modified APF method Dong Yang, Li Dong and Jun Kang Dai	846
A novel Human-Aware Navigation algorithm based on behavioral intention cognition Jiahao Li, Fuhai Zhang and Yili Fu	864
Semantic geometric fusion multi-object tracking and lidar odometry in dynamic environment Tingchen Ma, Guolai Jiang, Yongsheng Ou and Sheng Xu	891
Solving the inverse kinematics problem of discretely actuated hyper-redundant manipulators using the multi-module searching method Alireza Motahari	911
Image-based anti-interference robotic Chinese character writing system Xian Li, Chenguang Yang, Sheng Xu and Yongsheng Ou	931

Robotica now accepts submissions via Manuscript Central
