## Blood Disorders in the Elderly

Edited by Lodovico Balducci

William Ershler

Giovanni de Gaetano

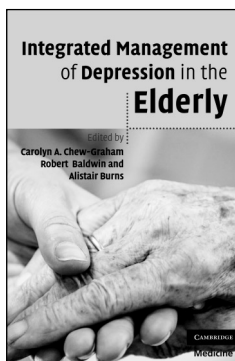

- The developed world has an increasingly aging population, with approximately 10% of the population aged over 65 years. As the incidence and prevalence of blood disorders increases with age, these conditions are a heavy burden on healthcare systems.
- This book provides clear clinical advice on the diagnosis and management of these conditions. Reviews the epidemiology of aging and anemia and provides a comprehensive approach to the management of cancer in the aging patient.

## Integrated Management of Depression in the Elderly

Edited by Carolyn A. Chew-Graham

Robert Baldwin

Alistair Burns

- Depression is one of the most common mental health problems facing older people, and it is often unrecognised and usually under-treated.
- This book presents an entirely new approach to understanding late-life depression by using a series of case studies of increasing complexity, it covers the epidemiology, presentation and diagnosis of depression in older people and outlines current evidence for effective management.
