

Local Peace, International Builders

Communal disputes over local issues such as land use, cattle herding, and access to scarce resources are a leading cause of conflict across the world. In the coming decades, climate change, forced migration, and violent extremism will exacerbate such disputes in places that are ill equipped to handle them. *Local Peace, International Builders* examines the conditions under which international interventions mitigate communal violence. The book argues that civilian perceptions of impartiality, driven primarily by the legacies of colonialism, shape interveners' ability to manage local disputes. Drawing on georeferenced data on the deployment of over 100,000 UN peacekeepers to fragile settings in the twenty-first century as well as a multimethod study of intervention in Mali – where widespread violence is managed by the international community – this book highlights a critical pathway through which interventions can maintain order in the international system. This title is also available as Open Access on Cambridge Core.

William G. Nomikos is Assistant Professor of Political Science at the University of California, Santa Barbara and the director of the Data-driven Analysis of Peace Project lab. His research focuses on international intervention, political violence, statebuilding, and intergroup relations. He has published widely on these topics and worked for the UN, the EU, the US Agency for International Development, and the Council on Foreign Relations.

Book Overview

Communal disputes over local issues such as land use, cattle herding, and access to scarce resources are a leading cause of conflict all over the world. In the coming decades, climate change, forced migration, and violent extremism will exacerbate such disputes in places that are ill equipped to handle them. Despite abundant evidence that international peacekeepers limit armed group violence, we know little about their ability to contain more localized forms of violence. *Local Peace, International Builders* explains the conditions under which international peacekeeping operations promote peaceful interactions between civilian communities in fragile settings. Its central theoretical insight is that civilian perceptions of peacekeepers' impartiality shape their ability to manage local disputes. My argument draws on georeferenced data on the deployment of more than 100,000 peacekeepers to localities across Africa from 1999 to 2019 as well as a multimethod study of peacekeeping in Mali, a West African country with widespread violence managed by peacekeepers. This data includes nearly fifty interviews with local political, religious, and traditional leaders; behavioral games with more than 500 Malians from fourteen ethnicities; and surveys of 1,400 civilians. The book highlights a critical pathway through which UN peacekeeping may successfully maintain order in the international system. The findings have clear implications for how we think about foreign interventions – and how they can be better designed in the future to prevent violence in conflict and postconflict settings.
