

SEROXAT

PENETRATES THE DARKNESS OF DEPRESSION WITH A SELECTIVE NEW LIGHT.

▶ Each December when the sun is at its most Southerly position, dawn light shines through a precisely designed lengthy passageway at Newgrange, Co. Meath, illuminating the ancient burial chamber, but no other part of the tomb.

▶ 'Seroxat' brings light back into the lives of depressed patients also in a specific way by selectively blocking the re-uptake of serotonin.¹

▶ The result: depression lifts² with a better adverse event profile versus tricyclic antidepressants.³
