

## INFORMATION FOR AUTHORS

The BULLETIN of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. To ensure speedy publication, only articles which are sufficiently well presented as not to require revision and which are judged by the Editor (often in consultation with an Associate Editor) to be competitive are refereed. This policy is in the interests of authors, as a quick rejection is better than a slow rejection, as the Editors receive more than three times the material that can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after peer review.

Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Further information regarding these requirements may be found from The London Mathematical Society and The American Mathematical Society. Authors are asked to avoid, as far as possible, the use of mathematical symbols in the title.

Authors should submit three clean, high quality copies to  
The Editorial Office, Bulletin of the Australian Mathematical Society,  
Department of Mathematics, The University of Queensland,  
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

## EDITORIAL POLICY

**1. References.** Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

### 2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

**3. Subject Classification.** Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

**4. Abstracts of Ph.D. Theses.** The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

**5. Electronic Manuscripts.** The BULLETIN is produced using  $\text{AMS-TeX}$ . Authors who are able to do so are invited to prepare their manuscripts using  $\text{TeX}$  (we accept Plain  $\text{TeX}$ ,  $\text{AMS-TeX}$  or  $\text{LATEX}$ ) and submit text on an IBM PC compatible diskette or via e-mail to [ams@maths.uq.edu.au](mailto:ams@maths.uq.edu.au). [Typed manuscripts are, of course, still acceptable.]

<b>The Hahn-Schur Theorem on effect algebras</b>	
A. Aizpuru, M. Nicasio-Llach and M. Tamayo .. .. .	161
<b>On the Dirichlet problem of elliptic type</b>	
Marek Galewski .. .. .	169
<b>Transformations for complex discrete linear Hamiltonian and symplectic systems</b>	
Yi Wang, Yuming Shi and Guojing Ren .. .. .	179
<b>Schur property and <math>\ell_P</math> isomorphic copies in Musielak-Orlicz sequence spaces</b>	
B. Zlatanov .. .. .	193
<b>Nearly extremal Cohen-Macaulay and Gorenstein algebras</b>	
Chanchal Kumar, Pavinder Singh and Ashok Kumar .. .. .	211
<b>On the distribution of angles of the Salié sums</b>	
Igor E Shparlinski .. .. .	221
<b>Extension problems and non-Abelian duality for <math>C^*</math>-algebras</b>	
Astrid an Huef, S. Kaliszewski and Iain Raeburn .. .. .	229
<b>An infinite class of identities</b>	
Ayşe Alaca, Şaban Alaca and Kenneth S. Williams .. .. .	239
<b>Orlicz-Pettis Theorem for <math>\lambda</math>-multiplier convergent operator series</b>	
Yuanhong Tao and Ronglu Li .. .. .	247
<b>Some invariants of Pretzel links</b>	
Dongseok Kim and Jaeun Lee .. .. .	253
<b>Composition operators on weighted Bergman-Orlicz spaces</b>	
Ajay K. Sharma and S.D. Sharma .. .. .	273
<b>A class of iteration methods for the matrix equation <math>AXB = C</math></b>	
Konghua Guo, Xiyan Hu and Lei Zhang .. .. .	289
<b>Two Ostrowski type inequalities for the Stieltjes integral of monotonic functions</b>	
W.-S. Cheung and S.S. Dragomir .. .. .	299
<b>Finite groups in which some property of two-generator subgroups is transitive</b>	
Constantino Delizia, Primož Moravec and Chiara Nicotera .. .. .	313
