

ERRATA

In the October 2013 issue of the journal, in the article by Leis et al (Leis JA, Gold WL, Daneman N, Shojania K, McGeer A. Downstream impact of urine cultures ordered without indication at two acute care teaching hospitals. *Infect Control*

Hosp Epidemiol 2013;34(10):1113–1114), the data presented in Figure 1 were incorrect. The second and third bars of data were mistakenly switched. The corrected figure is reprinted below. The authors regret the error.

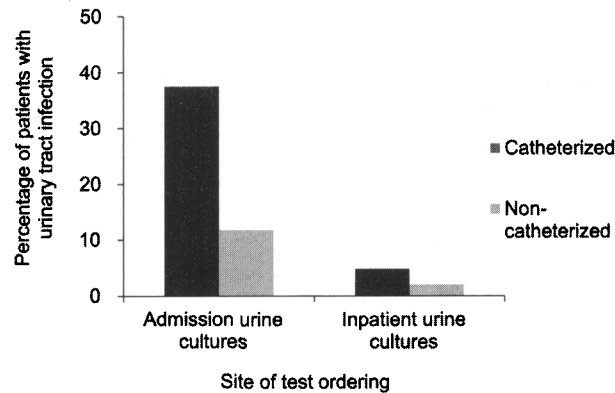

FIGURE 1. Proportion (%) of urine cultures associated with confirmed urinary tract infection based on prospectively applied Centers for Disease Control and Prevention criteria, according to site of test ordering ($n = 112$).

In the December 2013 issue of the journal, in the letter by Semel (Semel JD. Mucosal barrier injury laboratory-confirmed bloodstream infection or contaminant? *Infect Control Hosp Epidemiol* 2013;34(12):1330–1331), the last sentence of the letter is incorrect; it should not contain the word “pos-

itive.” The correct sentence is “In this population, I believe that MBI-LCBI would be more accurately defined by at least 2 culture specimens obtained via venipuncture.” The publisher regrets this error.
