The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR

LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgment must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks are provided free up to the limit of £10 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.

Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

9. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

United States of America

Orders for this *Journal* may be sent through local booksellers, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

The Hallpike Operating Headlamp

This Operating Headlamp has been based on designs and experimental constructions put at our disposal by Mr. C. S. Hallpike, F.R.C.S., F.R.S., of the Otological Research Unit, Medical Research Council, at the National Hospital, Queen Square.

Its lightweight optical system incorporates a heat absorbing filter and projects, at a convenient working distance, a brilliant homogeneous circle of light of 65 mm. diameter. This may be reduced to 12 mm. by means of a built-in iris diaphragm.

Location of the reflector between the surgeon's eyes ensures that his visual axes lie very close to the light beam, thus providing good optical penetration when working in small narrow-neck cavities.

- Convenient screw adjustment for fibre/polythene headband.
- Adjustable "over-band" for increased comfort during long operations.
- Fully adjustable support strut for maximum rigidity of optical system.
- Convenient finger grips for removal of headlamp.
- Vertical and angular adjustment of lamp unit, with positive locking action.
- Pre-centred, compact filament, 6 v. 18 watt lamp.
- Iris diaphragm control, with removable sterilizable sleeve.
- Control knob, with sterilizable sleeve, for adjustment of mirror angle and lateral rotation of lamp.

The Physics of the Ear

T. S. Littler, *Director, Wernher Research Unit on Deafness,
King's College Hospital Medical School London*

All the physical, physiological and neurological information
appertaining to hearing is summarized in this book, together
with the latest knowledge on defects of hearing and their
alleviation.

International Series of Monographs in Physics, Volume 3
392 pages 80s. (\$15.00)

Perception and Communication

D. E. Broadbent, *Applied Psychology Unit of the Medical
Research Council, Cambridge*

A review of recent experimental work within the field broadly
known as 'attention', with particular emphasis on hearing rather
than vision. The results are discussed in the theoretical
framework of information theory, and related to experimental
data from animals. Considerable space is given to a
re-examination of the problems usually handled by
neo-Pavlovian theory, and while some knowledge of current
psychological theorizing—particularly that of Hull and Skinner
—is desirable, it is not assumed that the reader is familiar with
information theory or has any mathematical knowledge at all.

344 pages 55s. (\$8.50)

"... we read with interest a scientist of imagination and
intelligence writing about the many subjects to which he has made
outstanding contributions." *Nature*

Ozaena A Manifestation of Iron Deficiency

I. Bernát, *Róbert Károly Central Hospital, Budapest*

Reviews the past methods of treatment of ozaena and considers
the aetiological factors regarding the incidence of the disease.
Dr. Bernát gives experimental and clinical evidence in the support
of his hypothesis that ozaena is a manifestation of iron
deficiency anaemia and can be cured by giving iron and
furthermore can be prevented by making efforts to secure a
proper diet for all poverty-stricken people.

134 pages 50s. (\$8.50)

Neuerscheinung!

Atlas der Ohren-, Nasen- und Halskrankheiten

sowie deren Grenzgebiete

Von Prof. Dr. med. habil. Dr. med. dent. *Isolde Kaiser-Meinhardt*, Direktor der Klinik und Poliklinik für Hals-Nasen-Ohrenkrankheiten der Humboldt-Universität (Charité), Berlin. 315 Seiten, 476 größtenteils farb. Abbildungen in 559 Einzeldarstellungen. 18,7 × 27 cm. 1965. Leinen 164.— MDN.

Der Atlas zeichnet sich dadurch aus, daß er sich vorwiegend auf Originalaufnahmen stützt, also der Auffassung maßgeblicher Wissenschaftler entgegenkommt, die zeichnerischen Darstellungen in Atlanten zugunsten der Originalaufnahmen zurücktreten zu lassen.—Mit dieser Methode wird dem Grundsatz der Praxisnähe weitgehend entsprochen.

Aus einer Fülle von Material hat die Autorin das Wichtigste und Instrukтивste systematisch ausgewählt und mit entsprechenden textlichen Erläuterungen zu einem Atlas zusammengestellt, der modernsten Anforderungen gerecht wird. Die Auswahl wurde so getroffen, daß neben den häufigeren Krankheitserscheinungen auch seltener vorkommende in ihren verschiedenen Stadien dargestellt und erläutert werden. Der Text zu den Abbildungen konzentriert sich vorwiegend auf Anamnese, Verlauf und Behandlung originaler Krankengeschichten, aus denen nur das Wesentliche (z. Teil auch die Ätiologie) gebracht wird. Der Atlas soll der Praxis und dem Studium dienen. Das umfangreiche Vergleichsmaterial wird dazu beitragen, schneller und sicherer zu diagnostizieren.

'OTOSPORIN'

The modern method of treatment in otitis externa, chronic suppurative otitis media, and infected mastoid cavities, is 'Otosporin' Drops. 'Otosporin' is an aqueous suspension containing neomycin and polymyxin B which are together effective against practically all the bacteria found in ear infections. In addition, it contains hydrocortisone to reduce inflammation and swelling, thereby providing easier access for the antibiotics.

'OTOSPORIN' BRAND Drops ISSUED IN BOTTLES OF 5 ml.
