Urban Ecology

The Second European Ecological Symposium, Berlin, 8-12 September 1980

Edited by **R. Bornkamm**
Institut für Ökologie, Technische Universität Berlin

J. A. Lee
Department of Botany, University of Manchester

and **M. R. D. Seaward**
School of Studies in Environmental Science, University of Bradford

Although changes in the flora and fauna of cities have been recorded since at least the middle of the nineteenth century, few integrated attempts have been made to examine the ecological relationships between plants and animals and the urban environment. The aims of this Symposium were to bring together the limited information available, to encourage further interest and research in urban ecology, and to encourage the use of ecological inputs to the planning process.

Outline of Contents

Urban ecosystems and their constitution; Ecological effects of human activity in urban areas; The acquisition and application of ecological knowledge in the urban environment.

1982. 384 pages, 75 illustrations. £27.50
