

Convergence of Productivity

Cross-National Studies and Historical Evidence

Edited by

WILLIAM J. BAUMOL,

New York University,

RICHARD R. NELSON,

Columbia University, and EDWARD N. WOLFF,
New York University

This comprehensive study asserts that, at least since the Second World War, industrial countries were growing increasingly homogeneous in terms of levels of productivity, technology and per capita incomes. Much of the analysis is set in a historical perspective, with particular attention paid to the record following World War II.

The Texture of Industry

An Archaeological View of the

Industrialization of North America

ROBERT B. GORDON, *Yale University,* and

PATRICK M. MALONE, *Brown University*

Demonstrating the value of material evidence in the interpretation of the past, *The Texture of Industry* looks at the industrialization of North America from the perspective of the industrial archaeologist. Using examples that range from Indian steatite quarries to automobile plants and coal mines, the authors examine manufacturing technology, transportation systems, and the effects of industrialization on the land.

1994 464 pp.; 137 halftones, 20 line drawings \$49.95

The German Tradition of Organized Capitalism

Self-Government in the Coal Industry

MARTIN F. PARNELL,

Liverpool John Moores University

Through a detailed examination of the German coal industry, Martin Parnell illustrates the historical evolution of the practice of industrial self-government and argues that historical continuities lie at the root of a full understanding of German capitalism. His study, which takes us from the eighteenth century to the present day, examines how intensive cooperation between state, management, the private sector, and unions has shaped the industry both in growth and decline.

(*Government-Industry Relations 7*)

1994 280 pp. \$55.00

Public and Private Ownership of British Industry 1820-1990

JAMES FOREMAN-PECK, *St. Antony's College, Oxford,* and ROBERT MILLWARD, *University of Manchester*

Britain led the way for much of the world with industrial privatization during the 1980s. Yet the historical origins of the process have rarely been discussed. This study shows how a common set of problems raised by basic industries, such as railways, gas, water, electricity, and telecommunications, have triggered varying responses of public policy over the last two centuries.

1994 408 pp.; 12 figures, 55 tables \$59.00

Government and the Enterprise since 1900

The Changing Problem of Efficiency

JIM TOMLINSON, *Brunel University*

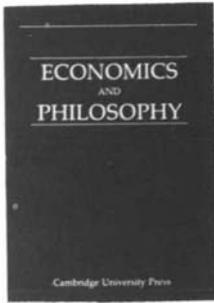

Surveying governmental industrial policy in Britain, James Tomlinson explores the perennial concern of government to improve the efficiency and the competitiveness of British industry. Organized chronologically, the book focuses on the formation of policymaking and policy implementation, and reveals both the macroeconomic context of industrial policy, and microeconomic effects of these policies.

Papers in *Economics and Philosophy* explore the foundations of economics as both a predictive/explanatory enterprise and a normative one. They examine the relevance of economic techniques, methods and conclusions to philosophical questions in ethics and social theory. The journal is designed to foster collaboration between economists and philosophers and to bridge the increasingly artificial boundaries between them. Each issue contains review essays, detailed book reviews, and continuing discussion on topics previously covered.

THE FIRST INDUSTRIAL WOMAN

DEBORAH VALENZE, *Barnard College*

Why study women and the industrial revolution? Deborah Valenze's groundbreaking reassessment of this classic problem in European history reminds us that questions of gender and work are at the center of our experience in the modern world. Too often, the study of industrialization charts an inevitable and largely technological course. Valenze sets aside this approach in order to examine the underlying assumptions about gender and work that informed the transformation of English society, and in turn, our ideas about economic progress. How did England change from an agriculturally based nation, in which female labor played an active and acknowledged part, to an industrial power resting on a notion of male productivity? Through selective treatments of agriculture, spinning, and cottage industries, Valenze shows how the rise of values of productivity and rationality subordinated women of the working class and strengthened an emerging ethos of individualism. She also analyzes the influential ideas of Thomas Malthus, Hannah More, and other authors, whose publications reinforced these same tendencies in the early nineteenth century. In an elegant and compelling account, Valenze charts the birth of a new economic order resting on social and sexual hierarchies which remain a part of our contemporary lives.

OXFORD Economics

Economic history from Manchester University Press

Insights from Economic History

This series makes accessible major results from recent research in economic history with an emphasis on issues of current importance. The books present an authoritative and objective view of the 'lessons of history' for the non-expert, while comprising essential reference material for the professional economic historian. The focus of the series is on issues in economic history that have contemporary relevance for policy-makers and for economists wishing for a digest of key research results.

Series Editor: Nick Crafts

Reconstructing Europe's trade and payments

The European Payments Union
Barry Eichengreen

"... many economists have forsaken historical inquiry for elaborate mathematical and statistical techniques. This excellent book shows how mistaken they are."

The Times Literary Supplement

This book provides an historical assessment of the EPU and draws out the implications of post-World War II Western European experience for Eastern Europe and the former Soviet Union. It identifies critical problems with attempting to apply the EPU model to those parts of the world today. 1993 216x138mm 147pp

Tariffs and growth

Some illustrations from the world economy, 1850-1940
Forrest Capie

This book traces the fluctuating fortunes of free trade as against protectionism from the 19th century to the middle of the 20th. It looks at the origins of the protectionist case, the circumstances in which it came to be adopted (and in which it sometimes flourished), how it has commonly been coupled with nationalism, and been associated with major calamities in the world economy.

Before Command

An Economic History of Russia
from Emancipation to
the First Five-Year Plan

PAUL R. GREGORY

Before Command is the culmination of Paul Gregory's lifelong study of the economic history of Russia and the Soviet Union. In a work with significant implications for present-day economic reform in the Soviet Union, Gregory examines Russian and Soviet economic history prior to the installation of the administrative command system. By drawing on basic economic statistics from 1861 to the 1930s, Gregory's revisionist account debunks a number of myths promulgated by historians in both the East and the West.

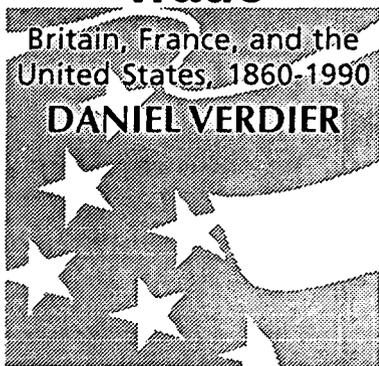

Cloth: \$35.00 ISBN 0-691-04265-9

Democracy and International Trade

Britain, France, and the
United States, 1860-1990

DANIEL VERDIER

In this ambitious exploration of how foreign trade policy is made in democratic regimes, Daniel Verdier casts doubt on theories that neglect voters. Verdier shows that special interests, party ideologues, and state officials and diplomats act as agents of the voters. Constructing a general theory in which existing theories (rent-seeking, median voting, state autonomy) function as partial explanations, he shows that trade institutions are not fixed entities but products of political competition. Verdier then offers a thorough analysis of how foreign trade policy was made in France, Britain, and the United States during the period from 1860 through 1990.

Understanding American Economic Decline

Michael A. Bernstein and David E. Adler, Editors

Foreword by Robert Heilbroner

Underlying each essay in this major new volume is the premise that the U.S.'s problems can be understood only in a broad historical context—that they arise not from cyclical phenomena, but structural distortions of the economy.

Contributors: Michael Bernstein, M. V. Lee Badgett, Robert Blecker, Samuel Bowles, James Galbraith, David Gordon, Jeffrey Hart, Robert Heilbroner, Jane Knodel, William Lazonick, Thomas Weisskopf, Rhonda Williams, Paulo Du Pin Calmon, Katherine Newman

Shen Pao-chen and China's Modernization in the Nineteenth Century

David Pong

Shen devoted his life to building China's first modern naval dockyard and academy. His successes and failures shed new light on the story of China's efforts at modernization—a story that has not come to a conclusion. As China engages in new rounds of economic and industrial modernization in the post-Mao era, many of these issues acquire new meanings and significance.

Econometric Theory

CAMBRIDGE
UNIVERSITY PRESS

NEW FREQUENCY:
5 issues per year beginning in 1994

Editor
Peter C.B. Phillips
Cowles Foundation for Research in Economics

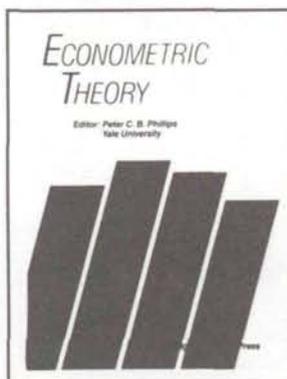

Econometric Theory is an international journal dedicated to advancing theoretical research in econometrics. The journal provides an authoritative, centralized, professional outlet for original contributions in all of the major areas of econometrics. As well as periodic book reviews and articles that embody original theoretical research, the journal publishes historical studies on the evolution of econometric thought and on major scholars.

Econometric Theory also serves an educational role by the inclusion of an on-going "Problems and Solutions" series and by "ET Interviews" with pre-eminent scholars in the field.

Announcing a special double issue of *Econometric Theory*

"Bayes Methods and Unit Roots," papers from a conference held at Yale University, April 1992

Conference organizers:
Peter Phillips and Christopher Sims

This thematic double issue of the journal (Volume 10, Numbers 3/4) is scheduled for publication in the early autumn of 1994. Researchers in statistics, probability, and econometrics exchange perspectives between Bayesian and classical statistical methodologies. Each paper was written by a conference participant, and all but three were presented at the conference.

Sixteen papers and the program of the conference are included in this issue, along with the regular Book Review and Problems and Solutions features.
