Australia*

This new journal brings together research on all aspects of metamorphic geology from a wide range of specialisms and will appeal to workers in the fields of metamorphic petrology, mineral deposits geology, geochemistry and other related fields in geology.

The scope of the journal extends over the whole range of metamorphic studies from the scale of the individual crystal to that of the lithospheric plate, including the properties of metamorphic minerals, the theoretical and experimental study of metamorphic reactions, the geochemistry of metamorphic rocks (including isotope geochemistry and fluid inclusion studies), microstructural studies of metamorphic rocks, deformation in relation to metamorphism, regional studies of metamorphic terrains (including geochemistry and geophysics), the environment of formation of metamorphic rocks, and economic aspects of metamorphic terrains (including the metamorphism of mineral deposits).

The journal is published quarterly.
The subscription rates for 1984 are £44.00 (U.K.),
£53.00 (overseas), \$97.50 (U.S.A. & Canada) post free.

Fellows of the *Geological Society of London* are entitled to subscribe at half price by applying direct to the Society; members of other recognised geological societies may obtain a 50% discount by applying to the publishers.

Research workers in the field of metamorphic geology are invited to submit material for publication in the journal direct to one of the editors from whom detailed 'Notes for the guidance of authors' may be obtained on request.

The Geological Map

An Anatomy of the Landscape

Eric Edmonds

This splendid introductory booklet explains how a geological map is made. An imaginary surveyor is followed into the field as he tackles the problems posed by examination of Central Skye, Wenlock Edge, the lake district and the Welsh Marches, among others. The book outlines how maps are used in the search for water and mineral deposits, in planning the development of the landscape and the exploitation of its natural resources. Its real triumph is the integration of the text with magnificent colour diagrams, which are exceptionally lucid and instructive.

British Fossils

John Thackray

The fossil record preserved in ancient sedimentary rocks exercises a powerful fascination over young and old alike, and in Britain it is rich and varied. This useful and informative full colour booklet from the Institute of Geological Sciences explains how fossils form, where they are found, and how best to collect them. It provides a basic guide to some of the classic sites in Britain, with illustrations of many interesting and unusual British fossils, as well as the more common varieties.

April 1984 Paperback **£1.50 net**

NOTES FOR CONTRIBUTORS

Contributions for publication should be addressed to The Editors, *Geological Magazine*, Department of Earth Sciences, Downing Street, Cambridge CB2 3EQ, England, or may be submitted through a member of the Editorial Advisory Board (addresses inside front cover). Submission implies that the manuscript has not been published previously nor currently submitted for publication elsewhere.

All contributions, whether articles, correspondence or reviews, must be sent in triplicate and typed on one side of the paper, with wide margins and double-line spacing throughout. Any minor corrections should be made neatly in the typescript, leaving the margins clear. Contributions should follow the general style of papers in recent issues of the *Magazine*. The total length of a paper should not in general exceed 12 pages of the new A4 format of the *Magazine*, or 13000 word-equivalents. Priority may be given to short papers. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be drafted for reproduction as single column (80 mm) or full page (168 mm) width. Originals should normally be drawn at twice final

area and must be sent in a flat package; larger drawings may delay publication. Lettering should be of a size so that when reduced the smallest lower-case letters will not be less than about 1 mm. Avoid gross disparities in lettering size on a drawing. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Illustrations in the text, both line drawings and photographs for halftone reproduction, will be referred to as figures (Fig. 2, 2a, etc.). Folding plates will not be accepted. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

The accuracy of references is the responsibility of authors. References must be double-spaced and spelt out in full, e.g.

Brooks, M. & James, D. G. 1975. The geological results of seismic refraction surveys in the Bristol Channel, 1970–73. *Journal of the Geological Society of London* **131**, 163–82.

Kirby, G. A. 1978. Layered gabbros in the Eastern Lizard, Cornwall, and their significance. *Geological Magazine* **115**, 199–204.

Books should be cited as:

Ager, D. V. 1981. *The Nature of the Stratigraphical Record*, 2nd ed. London: Macmillan, 122 pp.

Bott, M. H. P. 1973. The evolution of the Atlantic north of the Faroe Islands. In *Implications of Continental Drift to the Earth Sciences*, vol. 1 (ed. D. H. Tarling and S. N. Runcorn), pp. 175–89. London, New York: Academic Press.

Unpublished work, e.g. from dissertations of others, should normally be referred to in the text in parentheses as 'private communication' and not included in the reference list unless in the press.

Twenty-five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges if ordered when the proofs are returned.
