

Papers to appear in forthcoming issues

Abért, M. and Elek, G.	Dynamical properties of profinite actions
Abért, M. and Weiss, B.	Bernoulli actions are weakly contained in any free action
Alves, J. F. and Vilarinho, H.	Strong stochastic stability for non-uniformly expanding maps
Arbieto, A., Markarian, R., Pacífico, M. J. and Soares, R.	Scaling rate for semi-dispersing billiards with non-compact cusps
Arnaud, M.-C.	Lower and upper bounds for the Lyapunov exponents of twisting dynamics: a relationship between the exponents and the angle of the Oseledec's splitting
Bárány, B.	Dimension of the generalized 4-corner set and its projections
Barański, K., Karpińska, B. and Zdunik, A.	Bowen's formula for meromorphic functions
Bergweiler, W.	Fatou–Julia theory for non-uniformly quasiregular maps
Biswas, K.	Simultaneous linearization of germs of commuting holomorphic diffeomorphisms
Blokh, A., Curry, C. and Oversteegen, L.	Cubic critical portraits and polynomials with wandering gaps
Bonatti, Ch., Crovisier, S., Díaz, L. J. and Gourmelon, N.	Internal perturbations of homoclinic classes: non-domination, cycles, and self-replication
Bousch, T.	La distance de réarrangement, duale de la fonctionnelle de Bowen
Bowen, L. and Nevo, A.	Pointwise ergodic theorems beyond amenable groups
Brémont, J. and Buczolich, Z.	Maximizing points and coboundaries for an irrational rotation on a circle
Bruin, H. and Leplaideur, R.	Renormalization and thermodynamic formalism in subshifts
Carlsen, T. M. and Thomsen, K.	The structure of the C^* -algebra of a locally injective surjection
Carminati, C. and Tiozzo, G.	A canonical thickening of \mathbb{Q} and the entropy of α -continued fraction transformations
Chaika, J.	There exists a topologically mixing interval exchange transformation
Chazottes, J.-R. and Collet, P.	Poisson approximation for the number of visits to balls in non-uniformly hyperbolic dynamical systems
Chazottes, J.-R., Gambaudo, J.-M., Hochman, M. and Ugalde, E.	On the finite-dimensional marginals of shift-invariant measures
Cheung, Y., Goetz, A. and Quas, A.	Piecewise isometries, uniform distribution and $3 \log 2 - \pi^2/8$
Chu, Q. and Frantzikinakis, N.	Pointwise convergence for cubic and polynomial multiple ergodic averages of non-commuting transformations

- Conley, C. T., Kechris, A. S. and Tucker-Drob, R. D. Ultraproducts of measure preserving actions and graph combinatorics
- Cornelissen, G. and Kool, J. Measure-theoretic rigidity for Mumford curves
- Cortez, M. I. and Rivera-Letelier, J. Topological orbit equivalence classes and numeration scales of logistic maps
- Dani, S. G. BOOK REVIEW 'Ergodic Theory: with a view towards Number Theory' by Manfred Einsiedler and Thomas Ward
- Danilenko, A. I. A survey on spectral multiplicities of ergodic actions
- Deaconu, V., Kumjian, A. and Quigg, J. Group actions on topological graphs
- Demers, M. F., Wright, P. and Young, L.-S. Entropy, Lyapunov exponents and escape rates in open systems
- Deroin, B. The Poisson boundary of a locally discrete group of diffeomorphisms of the circle
- Dias, K. Enumerating combinatorial classes of the complex polynomial vector fields in \mathbb{C}
- Dolgopyat, D., Freidlin, M. and Korolov, L. Deterministic and stochastic perturbations of area preserving flows on a two-dimensional torus
- Dong, P., Donoso, S., Maass, A., Shao, S. and Ye, X. Infinite-step nilsystems, independence and complexity
- Dooley, A. H. and Zhang, G. Co-induction in dynamical systems
- Fang, Y. Invariant rigid geometric structures and expanding maps
- Farina, A. and Valdinoci, E. Some results on minimizers and stable solutions of a variational problem
- Ferguson, A. and Pollicott, M. Escape rates for Gibbs measures
- Fiebig, D. Canonical compactifications for Markov shifts
- Fried, D., Marotta, S. M. and Stankewitz, R. Complex dynamics of Möbius semigroups
- Gadre, V. S. Dynamics of non-classical interval exchanges
- Gomes, J. B. and Ruggiero, R. O. On Finsler surfaces without conjugate points
- Gorodnik, A. and Nevo, A. On Arnol'd's and Kazhdan's equidistribution problems
- Guivarc'h, Y. and Raja, C. R. E. Recurrence and ergodicity of random walks on linear groups and on homogeneous spaces
- Hartman, Y. Large semigroups of cellular automata
- Haydn, N., Nicol, M., Persson, T. and Vaienti, S. A note on Borel–Cantelli lemmas for non-uniformly hyperbolic dynamical systems
- Homburg, A. J. Circle diffeomorphisms forced by expanding circle maps
- Hua, Q. Continuity of packing measure function of self-similar iterated function systems
- Jiang, M. Differentiating potential functions of SRB measures on hyperbolic attractors
- Kenyon, R., Peres, Y. and Solomyak, B. Hausdorff dimension for fractals invariant under the multiplicative integers
- Kerr, D. and Nowak, P. W. Residually finite actions and crossed products

- Kesseböhmer, M., Munday, S. and Stratmann, B. O. Strong renewal theorems and Lyapunov spectra for α -Farey and α -Lüroth systems
- Kida, Y. Examples of amalgamated free products and coupling rigidity
- Kloeckner, B. Optimal transport and dynamics of expanding circle maps acting on measures
- Kosloff, Z. The zero-type property and mixing of Bernoulli shifts
- Kuřaga, J. On the self-similarity problem for smooth flows on orientable surfaces
- Kwietniak, D. and Oprocha, P. On weak mixing, minimality and weak disjointness of all iterates
- Li, Y., Chen, E. and Cheng, W.-C. Tail pressure and the tail entropy function
- Li, Z., Góra, P., Boyarsky, A., Proppe, H. and Eslami, P. Family of piecewise expanding maps having singular measure as a limit of ACIMs
- Liang, C., Sun, W. and Tian, X. Ergodic properties of invariant measures for $C^{1+\alpha}$ non-uniformly hyperbolic systems
- Liao, L. and Seuret, S. Diophantine approximation by orbits of expanding Markov maps
- Liao, L. and Steiner, W. Dynamical properties of the negative beta transformation
- de Lima, A. and Smania, D. On infinitely cohomologous to zero observables
- Liverani, C. Multidimensional expanding maps with singularities: a pedestrian approach
- Lyons, R. Fixed price of groups and percolation
- Maderna, E. On weak KAM theory for N -body problems
- Marcus, B. and Pavlov, R. Approximating entropy for a class of \mathbb{Z}^2 Markov random fields and pressure for a class of functions on \mathbb{Z}^2 shifts of finite type
- Matheron, É. Subsemigroups of transitive semigroups
- Mauduit, C. and Moreira, C. G. Generalized Hausdorff dimensions of sets of real numbers with zero entropy expansion
- Mayer, V. and Rempe, L. Rigidity and absence of line fields for meromorphic and Ahlfors islands maps
- Melbourne, I. and Török, A. Convergence of moments for Axiom A and non-uniformly hyperbolic flows
- Meyerovitch, T. Gibbs and equilibrium measures for some families of subshifts
- Miernowski, T. and Nogueira, A. Exactness of the Euclidean algorithm and of the Rauzy induction on the space of interval exchange transformations
- Mihaljević-Brandt, H. Dynamical approximation and kernels of non-escaping-hyperbolic components
- Möller, M. and Pohl, A. D. Period functions for Hecke triangle groups, and the Selberg zeta function as a Fredholm determinant
- Moss, A. and Walkden, C. P. Stable topological transitivity properties of \mathbb{R}^n -extensions of hyperbolic transformations
- Navas, A. An L^1 ergodic theorem with values in a non-positively curved space via a canonical barycenter map

- Peng, W., Yin, Y. and Zhai, Y. Density of hyperbolicity for rational maps with Cantor Julia sets
- Peter, J. Hausdorff measure of escaping and Julia sets for bounded-type functions of finite order
- Petersen, C. L. and Roesch, P. Carrots for dessert
- Poirier, A. Hubbard forests
- Ponce, M. Towards a semi-local study of parabolic invariant curves for fibered holomorphic maps
- Quas, A. and Siefken, J. Ergodic optimization of super-continuous functions in the shift
- Reeve, H. W. J. The packing spectrum for Birkhoff averages on a self-affine repeller
- Rousseau, J. Recurrence rates for observations of flows
- Schneider, M. Alexandrov embedded closed magnetic geodesics on S^2
- Szarek, T. and Worm D. T. H. Ergodic measures of Markov semigroups with the e-property
- Tsujii, M. Contact Anosov flows and the Fourier–Bros–Iagolnitzer transform
- Wang, Z. Rigidity of commutative non-hyperbolic actions by toral automorphisms
- Yildiz, I. B. Discontinuity of topological entropy for Lozi maps
- Yu, B. The templates of non-singular Smale flows on three manifolds
- Zhang, Y. and Lin, C. Invariant measures with bounded variation densities for piecewise area preserving maps

INSTRUCTIONS FOR CONTRIBUTORS

Editorial Policy

The journal welcomes high quality contributions on topics closely related to dynamical systems and ergodic theory. Submissions in the field of differential geometry, number theory, operator algebra, differential, topological, symbolic, measurable dynamics and celestial and statistical mechanics are especially welcome. Expository survey papers and reviews of relevant books will be published from time to time.

Submission of manuscripts

Manuscripts should be submitted via the website: <http://mc.manuscriptcentral.com/etds>.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The journal strongly recommends submission of accepted papers in L^AT_EX using the ETDS L^AT_EX class file. Papers that use this class file will be processed more efficiently. A L^AT_EX2e file `etds.cls` is available via anonymous ftp from the Cambridge University Press site at <ftp.cup.cam.ac.uk> in the directory `/pub/texarchive/journals/latex/etds-cls/`. In case of difficulties with these files, please contact etds@sunrise-setting.co.uk or the Journal editorial office at etds@maths.warwick.ac.uk. Alternatively, authors may use 'article' style.

On acceptance of a paper, authors should upload the L^AT_EX source code including the figures (line figures only) and all author-defined macro and style files, together with a pdf produced using the same file, via the submission site <http://mc.manuscriptcentral.com/etds>.

The publisher reserves the right to typeset any article by conventional means if the author's T_EX code presents problems in production.

Manuscript

Papers should be typed with generous margins. The pages must be numbered.

The first page should give the title, the author's name and institution, and a short abstract intelligible to mathematicians.

The title, while brief, must be informative (e.g. 'A new proof of the ergodic theorem', whereas 'Some applications of a theorem of Birkhoff' would be useless).

Notation

Avoid abbreviations such as Thm, Prop., Eq., iff. In the text do not use symbols \forall , \exists , \Rightarrow and \Leftrightarrow . Fractions are generally best expressed by a solidus. Complicated exponents like $\exp\{z^2 \sin \theta / (1 + y^2)\}$ should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.
If an author wishes to mark the end of the proof of a theorem, the sign \square may be used.

Footnotes should be avoided.

Figures

Graphics should be prepared to professional standards, preferably using Postscript or L^AT_EX drawing facilities. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the manuscript. Figures should be used sparingly and only when they greatly clarify the exposition. The preferred resolutions for submission of electronic artwork are: halftone images 300 dpi; line tone 600 dpi; bitmap 1200 dpi.

Tables

Tables should be numbered (above the table) as Table 1, Table 2, Indicate the position of each in the text as for figures.

References

References should be collected at the end of the paper numbered in alphabetical order of the author's names or by order of citation. Include in the list of references only those works that are cited. For the style of references please consult recent issues of the journal. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication:

[4] N. Dunford and J. T. Schwartz. *Linear Operators*. Part I. Wiley, New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Journal titles should be abbreviated as in *Mathematical Reviews*:

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.

Proofs

Authors receive one pdf proof for correction. Typographical and minor corrections only are permitted at this stage. For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions. It is important that proofs are corrected and returned promptly.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

Ergodic theory and dynamical systems

VOLUME 32 PART 2 APRIL 2012

DAN RUDOLPH MEMORIAL ISSUE

CONTENTS

<i>Boyle, M. and Weiss, B.</i> Remembering Dan Rudolph	319
<i>Rudolph, D. J.</i> Informal research statement	323
<i>Assani, I. and Presser, K.</i> Pointwise characteristic factors for the multiterm return times theorem	341
<i>Austin, T.</i> Norm convergence of continuous-time polynomial multiple ergodic averages	361
<i>Bergelson, V., Leibman, A. and Moreira, C. G.</i> From discrete- to continuous-time ergodic theorems	383
<i>Bowen, L.</i> Sofic entropy and amenable groups	427
<i>Burger, M. and Iozzi, A.</i> Bounded cohomology and totally real subspaces in complex hyperbolic geometry	467
<i>Burton, R. and Park, K. K.</i> Spatial determinism for a free Z^2 -action	479
<i>Conze, J.-P. and Gutkin, E.</i> On recurrence and ergodicity for geodesic flows on non-compact periodic polygonal surfaces	491
<i>Danilenko, A. I.</i> New spectral multiplicities for mixing transformations	517
<i>Dooley, A. H. and Golodets, V. Ya.</i> On the entropy of actions of nilpotent Lie groups and their lattice subgroups	535
<i>Dooley, A. H. and Rudolph, D. J.</i> Non-uniqueness in G -measures	575
<i>Downarowicz, T. and Serafin, J.</i> A short proof of the Ornstein theorem	587
<i>Fang, C., Huang, W., Yi, Y. and Zhang, P.</i> Dimensions of stable sets and scrambled sets in positive finite entropy systems	599
<i>Glasner, E. and Weiss, B.</i> On Hilbert dynamical systems	629
<i>Goldman, W. M. and Labourie, F.</i> Geodesics in Margulis spacetimes	643
<i>Hochman, M.</i> Slow entropy and differentiable models for infinite-measure preserving Z^k actions	653
<i>Holt, E.</i> A ratio ergodic theorem for Borel actions of $Z^d \times \mathbb{R}^k$	675
<i>Kalikow, S.</i> Non-intersecting splitting σ -algebras in a non-Bernoulli transformation	691
<i>Kalikow, S.</i> Infinite partitions and Rokhlin towers	707
<i>Katok, S. and Ugarcovici, I.</i> Applications of (a, b) -continued fraction transformations	739
<i>Lemańczyk, M. and Parreau, F.</i> Lifting mixing properties by Rokhlin cocycles	763
<i>Lindenstrauss, E. and Shapira, U.</i> Homogeneous orbit closures and applications	785
<i>Petersen, K.</i> An adic dynamical system related to the Delannoy numbers	809
<i>Rodríguez Hertz, F., Rodríguez Hertz, M. A., Tahzibi, A. and Ures, R.</i> Maximizing measures for partially hyperbolic systems with compact center leaves	825
Papers to appear in forthcoming issues	841
