

The Geology of New Zealand Vols. I & II

These volumes, prepared by the New Zealand Geological Survey, review the geological events which shaped New Zealand from the pre-Cretaceous period to the Recent.

Vol. I. The pre-Cretaceous Period.
Over 340 pages containing more than 280 photographs and illustrations plus geological maps of both the North and South Islands at a scale of 1:1,000,000.

Vol. II. The Cretaceous Period to the Recent.

398 pages with over 310 photographs and illustrations. Volume II also contains a comprehensive supplement incorporating all available information up to the time of printing. Both volumes are the first of their kind in New Zealand and are the result of more than fourteen years research and preparation. An invaluable work for any individual or organisation interested in New Zealand geology, i.e. Universities, Rock Hounds, Surveyors, Geologists, Engineers etc.

Price: \$NZ92.50 per set. Plus \$NZ6.50 postage and packaging.

A complete investigation service

The BB Service is fast and comprehensive with drilling to depths of up to 500 metres, laboratory testing and analysis followed by civil engineering reports and foundation recommendations.

Rigs are available for a variety of drilling work for coal and minerals in hard rock and for sampling, site investigation and underground drilling

NOTES FOR CONTRIBUTORS

Contributions for publication should be addressed to The Editors, *Geological Magazine*, Sedgwick Museum, Downing Street, Cambridge CB2 3EQ, England.

All contributions, whether articles, correspondence or reviews, must be typed in duplicate on one side of the paper, double spaced throughout, with a wide margin on the left of each page and a narrower margin on the right. Any minor corrections should be made neatly in the typescript, leaving the margins clear.

The total length of a paper should not in general exceed 20 pages of the *Geological Magazine*; preference and priority are given to short papers. Longer papers (between 20 and 40 pages of *Geological Magazine*) will from time to time be considered, but authors wishing to submit such manuscripts should first request further details.

The accuracy of references is the responsibility of authors. References must be double spaced and abbreviated in the form of the *World List of Scientific Periodicals* 4th Edition as far as possible, e.g.

Brooks, M. & James, D. G. 1975. The geological results of seismic refraction surveys in the Bristol Channel, 1970–73. *Q. Jl geol. Soc. Lond.* **131**, 163–82.

Kirby, G. A. 1978. Layered gabbros in the Eastern Lizard, Cornwall, and their significance. *Geol. Mag.* **115**, 199–204.

Books should be cited as:

Ramsey, J. G. 1967. *Folding and Fracturing of Rocks*. New York: McGraw-Hill.

Bott, M. H. P. 1973. The evolution of the Atlantic north of the Faroe Islands. In *Implications of Continental Drift to the Earth Sciences*, vol. 1 (ed. D. H. Tarling and S. N. Runcorn), pp. 175–89. London, New York: Academic Press.

Unpublished work, e.g. from theses, should normally be referred to in the text in parentheses and not included in the reference list unless in the press.

Articles must be accompanied by a brief summary. Contributions should follow the general style of papers in recent issues of the Magazine and the principles laid down in *Notes to Authors (Proc. Geol. Soc. Lond., No. 1627, Oct. 1965)*. Headings should be set out clearly, but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; sub-headings should be numbered 2.a, 2.b, etc., and tertiary headings 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.1.

Illustrations must be drawn to allow reduction to maximum size of 200 mm × 134 mm; originals should normally be drawn at twice final size and must be sent in a flat package. Lettering must allow for legibility after reduction (i.e. equivalent to 1 mm as a minimum on reduction). Duplicates of illustrations may be prints or, preferably, reductions. Metric units of the SI system are preferred. Illustrations in the text will be referred to as figures (Fig. 2, 2a, etc.), and halftone plates will be referred to (also in arabic) as Plates 2, 2a, etc. Folding plates will not be accepted. Captions for figures and plates must be typed on separate sheets.

Twenty-five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges.
