Are You Doing All You Can to Stop Methicillin-Resistant *Staphylococcus aureus* Outbreaks Where They Originate...

The Nares

- *Bactroban* Nasal is indicated for eradication of nasal colonization with methicillin-resistant *S. aureus* (MRSA) in adult patients and healthcare workers as part of a comprehensive infection control program to reduce the risk of infection among high-risk patients during MRSA outbreaks.¹
- In a hospital study, *Bactroban* Nasal contributed to a dramatic reduction in MRSA infections and vancomycin costs during an outbreak.²
- Excellent safety profile¹

The most frequently reported adverse events were headache (9%), rhinitis (6%), respiratory disorder (including upper respiratory tract congestion) (5%), pharyngitis (4%) and taste perversion (3%). Safety in children under 12 years of age has not been established in controlled clinical trials.

Contraindications ... Do not use *Bactroban* Nasal in patients with known hypersensitivity to any of the constituents of the product.

Please see brief summary of prescribing information on adjacent page.

Pharmaceuticals

Bactroban®
Nasal mupirocin
calcium

2% ointment for intranasal use

BACTROBAN® NASAL (mupirocin calcium ointment), 2%
Brief summary. For complete prescribing information, see package insert.

INDICATIONS AND USAGE

Bactroban Nasal is indicated for eradication of nasal colonization with methicillin-resistant *Staphylococcus aureus* in adult patients and health care workers as part of a comprehensive infection control program to reduce the risk of infection among patients at high risk of methicillin-resistant *S. aureus* infection during institutional outbreaks of infections with this pathogen.

NOTE:

- (1) There are insufficient data at this time to establish that this product is safe and effective as part of an intervention program to prevent autoinfection of high-risk patients from their own nasal colonization with *S. aureus*.
- (2) There are insufficient data at this time to recommend use of *Bactroban* Nasal for general prophylaxis of any infection in any patient population.
- (3) Greater than 90% of subjects/patients in clinical trials had eradication of nasal colonization 2 to 4 days after therapy was completed. Approximately 30% recolonization was reported in one domestic study within 4 weeks after completion of therapy. These eradication rates were clinically and statistically superior to those reported in subjects/patients in the vehicle-treated arms of the adequate and well-controlled studies. Those treated with vehicle had eradication rates of 5% to 30% at 2 to 4 days post-therapy with 85% to 100% recolonization within 4 weeks.

CONTRAINDICATIONS

Bactroban Nasal is contraindicated in patients with known hypersensitivity to any of the constituents of the product.

WARNINGS

AVOID CONTACT WITH THE EYES. Application of *Bactroban* Nasal to the eye under testing conditions has caused severe symptoms such as burning and tearing. These symptoms resolved within days to weeks after discontinuation of the ointment.

In the event of a sensitization or severe local irritation from *Bactroban* Nasal, usage should be discontinued.

PRECAUTIONS

General: As with other antibacterial products, prolonged use may result in overgrowth of nonsusceptible microorganisms, including fungi. (See **DOSAGE AND ADMINISTRATION** in complete prescribing information.)

Information for Patients: Patients should: apply approximately one-half of the ointment from the single-use tube directly into one nostril and the other half into the other nostril; avoid contact of the medication with the eyes; discard the tube after using; press the sides of the nose together and gently massage after application to spread the ointment throughout the inside of the nostrils; and discontinue using *Bactroban* Nasal and call a health care practitioner if sensitization or severe local irritation occurs.

Drug Interactions: The effect of the concurrent application of intranasal mupirocin calcium and other intranasal products has not been studied. Do not apply mupirocin calcium ointment, 2% concurrently with any other intranasal products.

Carcinogenesis, Mutagenesis, Impairment of Fertility: Long-term studies in animals to evaluate carcinogenic potential of mupirocin calcium have not been conducted. Results of the following studies performed with mupirocin calcium or mupirocin sodium *in vitro* and *in vivo* did not indicate a potential for mutagenicity: rat primary hepatocyte unscheduled DNA synthesis, sediment analysis for DNA strand breaks, *Salmonella* reversion test (Ames), *Escherichia coli* mutation assay, metaphase analysis of human lymphocytes, mouse lymphoma assay, and bone marrow micronuclei assay in mice. Reproduction studies were performed in rats with mupirocin administered subcutaneously at doses up to 40 times the human intranasal dose (approximately 20 mg mupirocin per day) on a mg/m² basis and revealed no evidence of impaired fertility from mupirocin sodium.

Pregnancy: Teratogenic Effects. Pregnancy Category B. Reproduction studies have been performed in rats and rabbits with mupirocin administered subcutaneously at doses up to 65 and 130 times, respectively, the human intranasal dose (approximately 20 mg mupirocin per day) on a mg/m² basis and revealed no evidence of harm to the fetus due to mupirocin. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Nursing Mothers: It is not known whether this drug is excreted in human milk. Because many drugs are excreted in human milk, exercise caution when *Bactroban* Nasal is administered to a nursing woman.

Pediatric Use: Safety in children under the age of 12 years has not been established. (See **CLINICAL PHARMACOLOGY** in complete prescribing information.)

ADVERSE REACTIONS

Clinical Trials: In clinical trials, 210 domestic and 2,130 foreign adult subjects/patients received *Bactroban* Nasal ointment. Less than 1% of domestic or foreign subjects and patients in clinical trials were withdrawn due to adverse events. In domestic clinical trials, 17% (36/210) of adults treated with *Bactroban* Nasal ointment reported adverse events thought to be at least possibly drug-related. The incidence of adverse events that were reported in at least 1% of adults enrolled in domestic clinical trials were as follows: headache, 9%; rhinitis, 6%; respiratory disorder, including upper respiratory tract congestion, 5%; pharyngitis, 4%; taste perversion, 3%; burning/stinging, 2%; cough, 2%; and pruritus, 1%.

The following events thought possibly drug-related were reported in less than 1% of adults enrolled in domestic clinical trials: blepharitis, diarrhea, dry mouth, ear pain, epistaxis, nausea and rash. All adequate and well-controlled clinical trials have been performed using *Bactroban* Nasal ointment, 2% in one arm and the vehicle ointment in the other arm of the study.

OVERDOSAGE

Following single or repeated intranasal applications of *Bactroban* Nasal to adults, no evidence for systemic absorption of mupirocin was obtained.

The Robert C. Byrd Health Sciences Center/West Virginia University—Charleston Division invites applications for the position of Assistant/Associate Professor of Internal Medicine in Infectious Diseases. This is a non-tenure track position that is 50% supported by the hospital to oversee the Infection Control program at Charleston Area Medical Center (CAMC). CAMC is a 919-bed tertiary care teaching hospital which serves Southern West Virginia. Fifty-percent of the time is dedicated to Infectious Diseases/Internal Medicine. Prior experience in hospital epidemiology is desirable. The position will remain open until a qualified candidate is identified. We offer a competitive salary and excellent fringe benefits. West Virginia University is an affirmative action/equal opportunity employer. Please send curriculum vitae and names of at least 3 references to:

All The Facts For Your Immunization Program

Immunizing Healthcare Workers: A Practical Approach

Edited by Gregory A. Poland, MD; William Schaffner, MD; Gina Pugliese, RN, MS
300 pp, Hard Cover, 2000, ISBN 1-55642-450-7, Order # 14507, \$109.00

Immunizing Healthcare Workers: A Practical Approach is the first complete resource for dealing with the immunization of healthcare workers. You can find all of the latest information on successfully and safely implementing or updating your immunization program in this landmark book.

Inside you will find that for each of the vaccine-preventable diseases among workers, there is a discussion of disease risks in the healthcare setting, vaccine recommendations, special administration strategies, safety issues, discussion of unresolved issues, and answers to commonly asked questions. There are also case studies of sample programs in specific settings.

This phenomenal book contains the latest recommendations from the US Public Health Service Advisory Committees, Healthcare Infection Control Practices Advisory Committee (HICPAC), and the Advisory Committee on Immunization Practices (ACIP).

Read how the experts overcame obstacles while setting up immunization programs in their healthcare settings. With over 45 contributors to 32 chapters, **Immunizing Healthcare Workers: A Practical Approach** is an essential source for the latest information necessary to implement an effective immunization program.

Both textbooks are an official publication of
The Society for Healthcare Epidemiology of America (SHEA).

Some Case Study Topics:

- Immunizing Providers and Staff in Physicians' Offices
- Vaccination of Healthcare Workers in Long-Term Care Facilities for the Elderly
- Immunization of Affiliating Students and Contract Home Healthcare Workers
- Immunization Strategies for Home Healthcare Personnel
- Immunization of Workers with Altered Host Defenses
- Vaccinating Unimmunized and Partially Immunized Workers
- Assessing Immunity and Exposures: Using a Computerized Surveillance System
- Managing Information in an Immunization Program
- The Internet: A Quick Guide to Vaccine & Immunization Information

A Practical Handbook for Hospital Epidemiologists

Edited by Loreen A. Herwaldt, MD and co-edited by Michael D. Decker, MD, MPH
448 pp, Soft Cover, 1998, ISBN 1-55642-302-0,
Order # 13020, \$65.00

A Practical Handbook for Hospital Epidemiologists is the most complete source for practical advice on hospital epidemiology. It is intended to be a pragmatic guide that will assist both beginning and experienced practitioners in establishing and operating a successful hospital epidemiology program. This handbook will supplement the various scientific references already available for this field and will help hospital epidemiologists improve their practices.
