

INFORMATION FOR AUTHORS

The *Bulletin of the Australian Mathematical Society* aims at quick publication of original research in all branches of mathematics. To ensure speedy publication, only articles which are sufficiently well presented, able to be published without revision, and which are judged by the Editor (often in consultation with an Associate Editor) to be competitive are refereed. This policy is in the interests of authors, as a quick rejection is better than a slow rejection. The *Bulletin* receives more than five times the material that can be published, therefore there are many commendable papers not accepted. Editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after peer review.

Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere. For a paper to be acceptable for publication, not only should it contain new and interesting results, but also

- (i) the exposition should be clear and attractive, and
- (ii) the manuscript should be in publishable form, without revision.

Further information regarding these requirements may be found through our website www.austms.org.au/Bulletin. Authors are asked to avoid, as far as possible, the use of mathematical symbols in the title.

Articles should be prepared in \LaTeX using $\mathcal{A}\mathcal{M}\mathcal{S}$ - \LaTeX packages and submitted as a PDF file via our journal management system, at www.austms.org.au/Publications/Submissions/BAustMS. This permits authors to track their papers through the editorial process. Recent versions of \TeX are able to produce PDF files directly. A \LaTeX class file for the *Bulletin* can be downloaded from the website. Authors who need assistance may email the secretary of the *Bulletin* at editor@bulletin.austms.org.au.

Authors are advised to keep copies of all files of the submitted article; the *Bulletin* will not accept responsibility for any loss.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are in preparation or submitted. Where the work cited is not readily accessible (for example, a preprint) a copy of the article should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 150 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification and Key Words. Authors should include a few key words and phrases and one or more classification numbers, following the American Mathematical Society 2010 Mathematics Subject Classification for all codes. Details of this scheme can be found on the web at www.ams.org/msc.

4. Abstracts of PhD Theses. The *Bulletin* endeavours to publish abstracts of all accepted Australasian PhD theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within six months of the degree being approved.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organisation established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

Table of Contents

Resolvable Mendelsohn designs and finite Frobenius groups <i>Hsu, D. F. & Zhou, S.</i>	1
On the total distance and diameter of graphs <i>Hua, H.</i>	14
The complexity of Thomason's algorithm for finding a second Hamiltonian cycle <i>Zhong, L.</i>	18
Supercongruences involving p-adic gamma functions <i>Liu, J.-C.</i>	27
Common slots of bilinear and quadratic Pfister forms <i>Chapman, A.</i>	38
Theta block Fourier expansions, Borcherds products and a sequence of Newman and Shanks <i>Poor, C., Shurman, J. & Yuen, D. S.</i>	48
A note on a complete solution of a problem posed by K. Mahler <i>Marques, D. & Moreira, C. G.</i>	60
Bounds for triple exponential sums with mixed exponential and linear terms <i>Yau, K. H.</i>	64
Mahler measure of 'almost' reciprocal polynomials <i>Saunders, J. C.</i>	70
On the derivation Lie algebras of fewnomial singularities <i>Hussain, N., Yau, S. S.-T. & Zuo, H.</i>	77
Classification of cubic homogeneous polynomial maps with Jacobian matrices of rank two <i>de Bondt, M. & Sun, X.</i>	89
Transformations on density operators preserving generalised entropy of a convex combination <i>Gaál, M. & Nagy, G.</i>	102
A note on normal complements for finite groups <i>Su, N., Ballester-Bolínches, A. & Meng, H.</i>	109
Box dimension of bilinear fractal interpolation surfaces <i>Kong, Q.-G., Ruan, H.-J. & Zhang, S.</i>	113
On systems of partial differential equations of Briot-Bouquet type <i>Li, F.</i>	122
Convergence of Mann's alternating projections in $CAT(\kappa)$ spaces <i>Choi, B. J.</i>	134
On overtwisted contact surgeries <i>Onaran, S.</i>	144
Intersections of multicurves from Dynnikov coordinates <i>Yurttaş, S. Ö. & Hall, T.</i>	149
On linear complementary dual four circulant codes <i>Zhu, H. W. & Shi, M.</i>	159
Few-weight codes from trace codes over R_k <i>Shi, M., Guan, Y., Wang, C. & Solé, P.</i>	167
Abstracts of PhD Theses	
Tangent bundles, monoidal theories and Weil algebras <i>Leung, P.</i>	175
