

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using \LaTeX . Authors who are able to do so are invited to prepare their manuscripts using \TeX . (We accept Plain \TeX , \LaTeX or \LaTeX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

An existence theorem for nonlinear hemivariational inequalities at resonance Leszek Gasiński and Nikolaos S. Papageorgiou	1
A counting formula about the symplectic similtude group Kwankyu Lee	15
Class number of (v, n, M)-extensions Osama Alkam and Mehpare Bilhan	21
An $(n + 1)$-fold Marcinkiewicz multiplier theorem on the Heisenberg group A.J. Fraser	35
An analogue for semigroups of a group problem of P. Erdős and B.H. Neumann Luise-Charlotte Kappe, John C. Lennox and James Wiegold	59
Permutation polynomials and group permutation polynomials Young Ho Park and June Bok Lee	67
The fixed point property and normal structure for some B-convex Banach spaces Jesus Garcia-Falset, Enrique Llorens-Fuster and Eva M. Mazcuñán-Navarro	75
A note on the circle actions on Einstein manifolds Seungsu Hwang	83
Restricted weak upper semicontinuous differentials of convex functions Julio Benítez and Vicente Montesinos	93
A metrisation theorem for pseudocompact spaces Chris Good and A.M. Mohamad	101
Some new generalisations of inequalities of Hardy and Levin-Cochran-Lee Aleksandra Čizmešija and Josip Pečarić	105
On (k, l)-sets in cyclic groups of odd prime order T. Bier and A.Y.M. Chin	115
Nonuniqueness and wellposedness of abstract Cauchy problems in a Fréchet space Peer Christian Kunstmann	123
Relationships between widths of a convex body and of an inscribed parallelootope Marek Lassak	133
Dimension invariance of subdivisions Jeh Gwon Lee, Wei-Ping Liu, Richard Nowakowski and Ivan Rival	141
Large deviation results for a U-statistical sum with product kernel Y.V. Borovskikh and N.C. Weber	151
On diagonal acts of monoids E.F. Robertson, N. Ruškuc and M.R. Thomson	167
