

THE DYNAMIC PLANET

W.G. Ernst, *Stanford University*
This invaluable introductory textbook shows how new, exciting developments in space exploration and global tectonics are impacting the solid earth sciences. Chronicling the origin and evolution of the Earth, Ernst details—

- the fundamental principles of the Earth's construction
- the nature of minerals and rocks
- plate tectonic processes
- the Earth's place in the solar system
- its internal structure and its crust.

A comprehensive 30-page glossary along with 125 line drawings and photos enhance the text.

\$34.50 cloth, \$20.00 paper

GEOPHYSICAL THEORY

William Menke and Dallas Abbott, both of *Columbia University*
Selecting material from the disciplines which encompass *solid earth geophysics*, this text introduces a wide range of general physical and applied mathematical techniques and shows how they can be applied to answering specific questions about the earth.

138 line drawings, \$52.00

MOUNTAINS**

THE INDOOR RADON PROBLEM

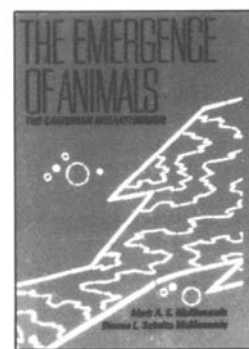

Douglas G. Brookins, *University of New Mexico*

Tens of thousands of people die annually from over-exposure to radon gas. This compelling investigation explains the hazards and the affordable options available for safe-guarding buildings, thus, providing the reader with an understanding of and management advice for this all-natural environmental disaster.

"Sounds a clarion call to action on a wide-spread health problem of which the public is largely unaware." — Publishers Weekly

THE EMERGENCE OF ANIMALS The Cambrian Breakthrough

Mark A.S. McMenamin and Dianna L. Schulte McMenamin, both of *Mt. Holyoke College*
Examining the major turning point in the earth's history, the boundary between the Cambrian and Precambrian periods, the authors describe the unique and fascinating fossil evidence of groups that appeared before and during the Cambrian. The often controversial conclusions are supported by numerous illustrations, some never before published. *Critical Moments in Paleobiology and Earth History*

Illustrations & photos, \$40.50 cloth, \$20.00 paper

MASS EXTINCTIONS Processes and Evidence

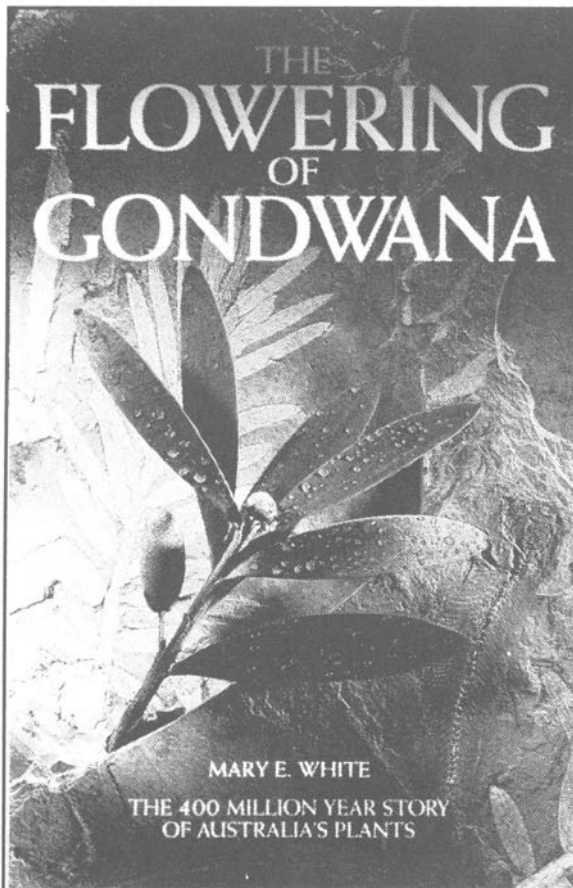

Edited by Stephen K. Donovan, *University of the West Indies*
This book contains the most current compilations on mass extinction—one of the most hotly contested and controversial debates. Its contributors present, for the first time, a critical evaluation of mass extinctions evidence and phenomena.

Illustrations, \$52.00

**The 400 Million Year Story
of Australia's Plants**

Mary E. White

Photographs by Jim Frazier

Illustrated with nearly four hundred magnificent color photographs and illustrations of fossils and living plants, this book tells the story of Australia's remarkable floral heritage. The author reveals a fascinating world, replete with hidden details and surprising beauty.

Mary White traces the evolution of plants from the earliest times when all life was confined to the water and the land was barren, and describes the emergence of the first land plants about 400 million years ago. The plants tell us of past climates, conjure up a picture of ancient landscapes, and explain configurations of land and sea on the ever-changing surface of the earth. The fossil record studied in this book is a tantalizing key to visualizing the world as it once was.

Cloth: \$49.50 ISBN 0-691-08592-7

THE PALAEOONTOLOGICAL ASSOCIATION

The association was founded in 1957 to promote palaeontology and its related disciplines. It is now the principle palaeontological organisation in the UK and its wide range of activities include publication of the journal **Palaeontology** and several other series of books as well as organising review seminars, fields meetings and an annual conference.

- **PALAEOONTOLOGY** The Association's journal, currently in its 33rd volume, is world renowned for the quality of its articles (which include both review and research papers), and their presentation. Papers cover a full and international spectrum of palaeontology including taxonomy, palaeoecology, palaeobotany and vertebrate palaeontology. Four volumes are published annually and are available free to members of the Association.

- **SPECIAL PAPERS IN PALAEOONTOLOGY A** biannual series of longer palaeontological papers and symposia volumes produced to the same high quality as **Palaeontology**.

- **OTHER PUBLICATIONS** These include the prize-winning Field Guide to Fossils series, which includes, "Fossil Plants of the London Clay", "Fossils of the Chalk" and "Zechstein Reef Fossils" for use in the field and as reference works in themselves. In addition the Association also produces a bimonthly newsletter for all members, containing information on meetings, book reviews and general palaeontological news.

- **MEMBERSHIP** This is open to individuals and institutions on payment of the appropriate annual subscription fee. Rates are:-
Institutional membership.. £60 (US\$108) Student membership.. £11.50 (US\$20)
Ordinary membership..... £28 (US\$50) Retired membership..... £14.00 (US\$25)
for which **Palaeontology** and the **Palaeontology Newsletter** are supplied free.

Institutional membership enquiries should be addressed to Dr A.W. Owen, Department of Geology, The University, Glasgow G12 8QQ whilst other enquiries and application forms should be addressed to Dr H.A. Armstrong, Department of Geological Sciences, University of Durham, South Road, Durham DH1 3LE.

PROCEEDINGS OF THE GEOLOGISTS' ASSOCIATION

— Edited by J. M. Gray —

The Geologists' Association was founded in 1858 to foster progress and diffusion of Geology, and to encourage research and the development of new methods. *Proceedings of the Geologists' Association* publishes original research (including short communications) and review papers on all aspects of geology, as well as reports of Field Meetings, correspondence and book reviews.

Recently published papers include:

Wind erosion in deserts A. S. Goudie

Foraminifera as indicators of geological events C. G. Adams

Stratigraphy of the Palaeogene: hiatuses and transitions C. Pomerol

The English Channel: by geological design or catastrophic accident?
A. J. Smith

Thoughts on the evolution and extinction of Cretaceous ammonites
W. J. Kennedy

Cleavage, folding and the finite strain ellipsoid J. W. Cosgrove

Sea-level change in the British region during the Late Cretaceous
J. M. Hancock

The Yangtze platform: gateway to Chinese geology C. H. Holland

Macrofaulting in the Purbeck-Isle of Wight Monocline M. S. Ameen

A century plus of fossil insects E. A. Jarzembowski

Age of metamorphism in the Rosslare Complex, S.E. Ireland M. D. Max &
J. C. Roddick

NOTES FOR CONTRIBUTORS

Contributions for publication should be addressed to The Editors, *Geological Magazine*, Department of Earth Sciences, Downing Street, Cambridge CB2 3EQ, England, or may be submitted through a member of the Editorial Advisory Board (addresses inside front cover). Rapid Communications should be clearly marked as such on the envelope. Submission implies that the manuscript has not been published previously nor currently submitted for publication elsewhere.

All contributions, whether articles, correspondence or reviews, must be sent in triplicate and typed on one side of the paper, with wide margins and double-line spacing throughout. Any minor corrections should be made neatly in the typescript, leaving the margins clear. Contributions should follow the general style of papers in recent issues of the *Magazine*. The author is invited to nominate up to five possible referees, who will not necessarily be used.

Articles must be accompanied by a brief, informative rather than indicative, abstract. Headings should be set out clearly but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; subheadings should be numbered 2.a., 2.b., etc., and tertiary headings 2.a.1., 2.a.2. No cross-references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.2. The SI system of units should be used. The author should mark in the margin of the manuscript where figures and tables may be inserted. References to points in larger works should, where possible, quote the page reference, e.g. Ager, 1981, p. 102. Authors alone are responsible for the correctness of their references.

Rapid Communications should follow the style of articles and must be no more than four printed pages of the *Magazine* (approximately 5000 word-equivalents) including an abstract of no more than 100 words. These contributions will be dealt with by a streamlined schedule and should appear within six months from receipt. To meet this schedule, authors will be required to make revisions with minimal delay.

Discussions of papers which have already appeared in the *Magazine* are welcomed, subject to the four-page limit.

Tables should be typed with double-line spacing on sheets separate from the running text. Each table must have a caption that will make the data in the table intelligible without reference to the text.

Illustrations should be prepared following the notes for guidance on the facing page. Duplicates of illustrations should be sent, and may be prints or, preferably, photocopies reduced to final size. Figures composed of photographs should be glossy prints presented at publication scale. Figure captions must be typed with double-line spacing on sheets separate from the running text.

References must be double-spaced and spelt out in full, e.g.

BROOKS, M. & JAMES, D. G. 1975. The geological results of seismic refraction surveys in the Bristol Channel, 1970–73. *Journal of the Geological Society of London* **131**, 163–82.

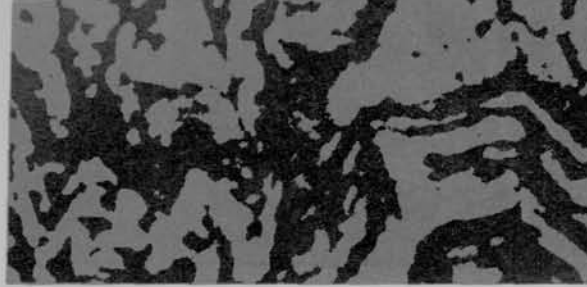

Books should be cited as:

AGER, D. V. 1981. *The Nature of the Stratigraphical Record*, 2nd ed. London: Macmillan, 122 pp.

BOTT, M. H. P. 1973. The evolution of the Atlantic north of the Faroe Islands. In *Implications of Continental Drift to the Earth Sciences*, vol. 1 (eds D. H. Tarling and S. N. Runcorn), pp. 175–89. London, New York: Academic Press.

Unpublished work should normally be referred to in the text in parentheses as, for example, 'private communication' or 'unpub. Ph.D. thesis, Univ. London, 1988', and not included in the reference list unless in the press.

Fifty offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges if ordered when the proofs are returned. Rapid Communications will receive 10 free offprints; no further copies may be purchased.

VOLUME 128

NUMBER 1

JANUARY 1991

Geological Magazine

CONTENTS

- A Cambrian island arc in Iapetus: geochronology and geochemistry of the Lake Ambrose volcanic belt, Newfoundland Appalachians
DUNNING, G. R., SWINDEN, H. S., KEAN, B. F., EVANS, D. T. W. & JENNER, G. A. 1-17
- Cathodoluminescence of Recent biogenic carbonates: an environmental and ontogenetic fingerprint
BARBIN, V., RAMSEYER, K., DEBENAY, J. P., SCHEIN, E., ROUX, M. & DECROUEZ, D. 19-26
- Origin and emplacement of an inferred late Jurassic subduction-accretion complex, Euboea, eastern Greece
ROBERTSON, A. H. F. 27-41
- Modelling of chalk diagenesis (Eldfisk Field, Norwegian North Sea) using whole rock and laser ablation stable isotopic data
MALIVA, R. G., DICKSON, J. A. D. & RÅHEIM, A. 43-49
- Igneous stratigraphy and internal structure of the Little Minch Sill Complex, Trotternish Peninsula, northern Skye, Scotland
GIBSON, S. A. & JONES, A. P. 51-66
- Geophysical correlation of the Aptian and Albian formations in the Wessex Basin of southern England
RUFFELL, A. H. 67-75
- RAPID COMMUNICATION**
- The age and tectonic significance of the Bute amphibolite, Highland Border Complex, Scotland
DEMPSTER, T. J. & BLUCK, B. J. 77-80
- REVIEWS** 81-92
- PUBLICATIONS RECEIVED** 93-95
- NOTICES** 97
