Soils and the Environment

An Introduction

ALAN WILD

This text provides an introduction to general soil properties and processes and considers soil in relation to both the man-made and the natural environment. The first part of the book deals with general soil properties and processes whilst the second part considers soil in relation to the environment.

Fruit and Seed Production

Aspects of Development,
Environmental Physiology and
Ecology

Edited by C. MARSHALL and J. GRACE

The topic of fruit and seed production has received relatively little attention until now compared with studies on the growth and development of vegetative structures. This is the first book to address this deficiency.

Textbook

Agricultural Policies in Developing Countries

FRANK ELLIS

This undergraduate textbook considers the methods used by governments to change the environment within which agricultural production takes place: by influencing the prices of farm inputs and outputs, by modifying agricultural institutions, and by promoting new technologies in agriculture.

Wye Studies in Agricultural and Rural Development

World Soil Erosion and Conservation

Edited by DAVID PIMENTEL

Foreword by MARTIN HOLDGATE

Land degradation from soil erosion is considered by many to be the most significant environmental problem facing the world today, affecting some 30–50% of the earth's land surface. This important book presents the findings of a group commissioned by the International Union for the Conservation of Nature to assess this ecological problem.

Cambridge Studies in Applied Ecology and Resource Management

Plant Genetic Resources of Ethiopia

J. M. M. ENGELS

One of the world centres of crop evaluation has long been recognised as an important area of diversity for several major and various minor crops. This book describes how this genetic diversity is of vital importance in breeding new varieties of crops with desirable characteristics.

Agricultural Research Policy

International Quantitative
Perspectives

Edited by P. G. PARDEY, J. ROSEBOOM
and J. R. ANDERSON

An exploration of the major policy dimensions of agricultural research with a primary focus on less developed countries. The approach is strongly quantitative and is primarily based on the *ISNAR Agricultural Research Indicator Series*.

Textbook

Plants in Agriculture

JAMES C. FORBES and
R. DRENNAN WATSON

The effective management of plants is fundamental to all agricultural enterprise, making botany a key science for all growers. This book provides an integrated explanation of all aspects of plant form and function. Specific chapters cover water, minerals, structure, growth and development from sowing to harvest, environment affects and controls, breeding, vegetative propagation, field production and yield, and the nutritional content of produce.

Textbook

A Dictionary of Plant Pathology

PAUL HOLLIDAY

The first comprehensive dictionary of plant pathology; an essential reference for all plant pathologists and agriculturalists. 'To develop a cliché, no student, teacher, researcher, plant pathologist, editor or library should be without it.' *Plant Pathology*
£37.50 net HB 0 521 33117 X 392 pp. 1989

Seasonality and Agriculture in the Developing World

J. G. GILL

Examines the nature, causes and effects of seasonal stress in developing countries, and the strategies that people have traditionally used to help counter the problem.

£50.00 net HB 0 521 38257 2 361 pp. 1991

Textbook

Agricultural Plants

Second Edition

R. H. M. LANGER and G. D. HILL

This book describes economically important field crops and pasture plants of temperate and subtropical regions in detail, and the products which are obtained from them. An introductory text, it bridges the gap between classical botany and agronomy. It will therefore be of interest to students and teachers of agricultural botany, economic botany and agronomy.

Textbook

Crop Ecology

Productivity and Management in Agricultural Systems

R. S. LOOMIS and D. J. CONNOR

A detailed introduction to agricultural ecology with emphasis on productivity and systems concepts. The authors have integrated reference and background material to create a 'stand-alone' reference work useful to a wide audience of agriculturalists.

£60.00 net HB 0 521 38379 X 552 pp. 1992
£22.95 net PB 0 521 38776 0

Tropical Pasture Utilisation

L. R. HUMPHREYS

Examines the problems involved in the utilisation of tropical and subtropical pastures and explains how pastures may be managed to meet the requirements of both plants and animals for growth and replacement.
