The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY
SIR GEOFFREY BATEMAN

ASSISTANT EDITOR
JOHN BALLANTYNE

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgement must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and Brown, D. (1951), *Journal of Laryngology and Otology*, 65, 33. The titles of all Journals should be given without abbreviation.

It is most important that authors should verify personally the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks will normally be held by the Printers for three years, after which they will be destroyed. Any author is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS LTD., The Invicta Press, Ashford, Kent. Coloured illustrations will be charged to authors, unless a special grant is authorized by the Editor.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS LTD., The Invicta Press, Ashford, Kent.

7. The annual subscription is £8 (eight pounds sterling) post free: U.S.A. \$23 post free, and payable in advance.

8. Single copies of current or back numbers (when available) will be on sale at £1 (including postage) each.

9. All subscriptions, advertising and business communications should be sent to the publishers, or subscription agents.

AMPLIVOX 84

The successor to the world's most widely used clinical Audiometer.

**Take a look at all the advantages you get
with this superb audiometer.**

- *Pure tone at eleven frequencies—now including 750 Hz*
- *Bone conduction at eight frequencies*
- *Narrow band masking via insert and headphones
Automatic presentation*
- *ISO specification*
- *Trimpot calibration*
- *Continuously variable second channel for ABLB
(Fowler) recruitment test*
- *Tone decay test*
- *Illuminated patient's signal*

PLUS Calibrated speech audiometry via microphone or tape.

WALLY USED TO SLEEP ON THE JOB

Antihistamine drowsiness is no joke when you're on piece-work. Particularly if you like a drink or a drive. That's why Wally's doctor put him on Rynacrom. Rynacrom clears and prevents the symptoms of allergic rhinitis and is effective against a wide spectrum of allergens, from house dust to pets and pollens. Its specific, local action means that there are no untoward effects.

Put your next patient on Rynacrom. It soon had Wally back on the job.

RYNACROM[®]
for allergic rhinitis

Further information on Rynacrom (Sodium Cromoglycate BP) is available from
FISONS LIMITED—PHARMACEUTICAL DIVISION, Loughborough, Leics.

Squamous cell carcinomas of the head and neck often respond to Bleomycin Lundbeck

Bleomycin may be of value, either alone (1, 2, 3) or in combination with radiation (4, 5) in the treatment of tumours affecting the mouth, nasopharynx and paranasal sinuses, larynx or oesophagus. Well differentiated tumours usually respond better than anaplastic ones.

Bleomycin has:

No toxic effect on the bone marrow.

No immunosuppressive action.

There have been no reports of cross resistance with other currently used oncolytic drugs.

Dose: 15mg-30mg intramuscularly or intravenously to a total dose of up to 300mg depending on factors including the condition to be treated and the age of the patient.

Adverse reactions: Side effects which may occur include fever, anorexia, tiredness, nausea and the development of lesions of the skin or oral mucosa. Interstitial pneumonia may occur during, or occasionally after, a course of treatment. This condition may on occasions develop into fatal pulmonary fibrosis, but such an occurrence is rare on recommended doses. Patients undergoing treatment should have chest X-rays taken weekly.
