
Australian Journal of Ecology

Edited by Dr Ian Noble, Research School of Biological Sciences, Australian National University, P.O. Box 475, Canberra City, Australia 2601

This journal is published on behalf of the Ecological Society of Australia, whose aims are:

- To promote the scientific study of all organisms in relation to their environment
- To promote the application of ecological principles to the development, utilization and conservation of Australian natural resources
- To promote publication of the results of research in ecology
- To advise governmental and other agencies in matters where the application of ecological principles may be of assistance
- To foster the reservation of natural areas for scientific and recreational purposes and seek to ensure that such areas are soundly managed.

Australian Journal of Ecology is devoted to reports of ecological research and critical reviews of methodology based on work of Australasian origin. Much of the material has a strong theoretical base and is therefore of relevance to workers in other geographical areas. The increasing amount of work of a high scientific quality submitted to the journal has led to a considerable expansion in recent years.
