1	Introduction	1
1.1	Factorization and high-energy collisions	3
1.2	Why we trust QCD is correct	6
1.3	Notation	6
1.4	Problems and exercises	7
2	Why QCD?	8
2.1	QCD: statement of the theory	9
2.2	Development of QCD	10
2.3	Deeply inelastic scattering	16
2.4	Parton model	23
2.5	Asymptotic freedom	28
2.6	Justification of QCD	29
2.7	QCD in the full Standard Model	31
2.8	Beyond the Standard Model	32
2.9	Relation between fields and particles	33
Exercise	es	34
3	Basics of QCD	36
3.1	Quantization	36
3.2	Renormalization	39
3.3	Renormalization counterterms of QCD	45
3.4	Meaning of unit of mass, renormalization scale	48
3.5	Renormalization group	51
3.6	Solution of RG equations	54
3.7	Values of RG coefficients	58
3.8	Symmetries and approximate symmetries of QCD	60
3.9	Dealing with quark masses	62

3.10 3.11	CWZ (ACOT) method for heavy quarks Relating CWZ subschemes with different numbers of active quarks	64 66
Exercis	es	67
4	Infra-red safety and non-safety	69
4.1	e^+e^- total cross section	69
4.2	Explicit calculations	75
4.3	Evolution of state	81
4.4	Dispersion relation and effective virtuality of final-state quarks and gluons	84
4.5	Generalizations	86
Exercis	es	86
5	Libby-Sterman analysis and power-counting	87
5.1	High-energy asymptotics and mass singularities	88
5.2	Reduced graphs and space-time propagation	91
5.3	Examples of general reduced graphs	92
5.4	One-loop vertex graph	105
5.5	Power-counting for vertex graph	111
5.6	Which reactions have a pinch in the Glauber region?	125
5.7	Coordinates for a PSS	130
5.8	Power-counting	134
5.9	Catalog of leading regions	146
5.10	Power-counting with multiple regions	148
5.11	Determination of Glauber-like regions	156
Exercis	es	158
6	Parton model to parton theory: simple model theories	161
6.1	Field theory formulation of parton model	161
6.2	When is the parton model valid?	170
6.3	Parton densities as operator matrix elements	174
6.4	Consequences of rotation and parity invariance: polarization dependence	177
6.5	Polarization and polarized parton densities in spin- $\frac{1}{2}$ target	179
6.6	Light-front quantization	180
6.7	Parton densities as number densities	185
6.8	Unintegrated parton densities	190
6.9	Properties of parton densities	190
6.10	Feynman rules for pdfs	201
6.11	Calculational examples	202
Exercis	es	210
7	Parton theory: further developments	213
7.1	DIS with weak interactions, neutrino scattering, etc.	213
7.2	Light-front perturbation theory	217

ix

Apper	ndix A: Notations, conventions, standard mathematical results	582
A.1	General notations	582
A.2	Units, and conversion factors	582
A.3	Acronyms and abbreviations	583
A.4	Vectors, metric, etc.	584
A.5	Renormalization group (RG)	584
A.6	Lorentz, vector, color etc. sub- and superscripts	585
A.7	Polarization and spin	585
A.8	Structure functions	586
A.9	States, cross sections, integrals over particle momentum	587
A.10	Dirac, or gamma, matrices	587
A.11	Group theory	588
A.12	Dimensional regularization and $\overline{\text{MS}}$: basics	589
A.13	Dimensional regularization: standard integrals	590
A.14	Properties of Γ function	591
A.15	Plus distributions, etc.	591
A.16	Feynman parameters	592
A.17	Orders of magnitude, estimation, etc.	592
Apper	ndix B: Light-front coordinates, rapidity, etc.	595
B.1	Definition	595
B.2	Boosts	596
B.3	Rapidity	596
B.4	Pseudo-rapidity	598
B.5	Rapidity distributions in high-energy collisions	598
Apper	ndix C: Summary of primary results	600
	References	603
	Index	617
