The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR

LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgement must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951), *Journal of Laryngology and Otology*, 65, 33. The titles of all Journals should be given without abbreviation.

It is most important that authors should verify personally the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks will normally be held by the Printers for three years, after which they will be destroyed. Any author is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS LTD., The Invicta Press, Ashford, Kent. Coloured illustrations will be charged to authors, unless a special grant is authorized by the Editor.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS LTD., The Invicta Press, Ashford, Kent.

7. The annual subscription is £8 (eight pounds sterling) post free; U.S.A. \$23 post free, and payable in advance.

8. Single copies of current or back numbers (when available) will be on sale at £1 (including postage) each.

9. All subscriptions, advertising and business communications should be sent to the publishers, or subscription agents.

Don't think!

This knob will do it for you!

We believe at Amplivox that life is difficult enough and that audiometry can become altogether too complicated with the complex tests that are being done today.

We believe that an audiometer should do all the thinking for you. With the Model 103 Clinical Audiometer all audiometric tests can be reached by switching only one knob.

One knob and you can switch to 18 different functions:

- Pure Tone Air Conduction
- Pure Tone Bone Conduction
- Narrow Band Masking
- Wide Band (White Noise) Masking
- Alternate Binaural Loudness Balance
- Simultaneous Binaural Loudness Balance
- Speech, Live Voice
- Speech, Recorded
- Speech with Masking
- SISI Test
- Lüscher DL Test
- Audiometer Weber Test
- SAL Test
- Rainville Test
- Shifting Voice
- Stenger Test
- Modified Stenger Test
- Tone Decay Test

Model 103 engineering is functional engineering with the operator in mind. We believe the audiometer should do the thinking and that the operator should have an easy relaxed life.

the complete de-bugging device

clears both fungi and bacteria in ear infections

Candida albicans and *Aspergillus niger* are isolated in over 20 per cent of cases of otitis externa, and if high success rates are to be achieved treatment must take account of this. Otoseptil® ear drops employs a very broad-spectrum attack with efficient anti-inflammatory action.

The new antibiotic ester—neomycin undecylenate—provides potent dual bactericidal and antifungal activity.

Tryrothricin (containing gramicidin and tyrocin) effectively eliminates resistant Gram-positive cocci, while Hydrocortisone alcohol exerts its characteristic anti-inflammatory action. Rapid tissue contact is ensured by the penetrant Ethylene oxide polyoxypropylene glycol condensate, which is incorporated in the clear liquid ear drop.

For pain relief, AUDAX® ear drops may be used concomitantly with Otoseptil® ear drops because they are completely miscible and compatible.

Full information is available on request.

Special features include:

- 1** Compact design with high intensity coaxial illumination
- 2** Motorised zoom continuous magnification changer controlled by a new single foot pedal
- 3** Motorised fine focus control operated by the same foot pedal – leaving both hands free for surgery
- 4** Built-in geared tilting for accurate alignment of the microscope head
- 5** Coupling K120/76 with geared angling movement of the microscope head. Can also be used with all existing Zeiss Operating Microscopes

the drop that soothes and clears infected ears

soothes by reducing inflammation with hydrocortisone
clears by rapidly destroying virtually all bacteria commonly
found in ear infections

OTOSPORIN drops contain polymyxin B sulphate, neomycin sulphate
and hydrocortisone in a bland suspension designed to facilitate penetration.
Supplied in dropper bottles of 5 ml. Full information is available on request.

**“Your otitis externa patient
needs something that
attacks infection and fungi
and inflammation
and pain and irritation...”**

Audicort helps you attack all five at once!

Otitis externa usually means bacterial infection and fungal infection. So prescribe Audicort, the only ear drops with the five-way action.

Neomycin against bacteria plus undecylenic acid against fungi... plus triamcinolone acetonide against inflammation and irritation, benzocaine against pain.
