

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{T}\mathcal{E}\mathcal{X}$. (We accept Plain $\mathcal{T}\mathcal{E}\mathcal{X}$, $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$.) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Composition operators on some Möbius invariant Banach spaces Shamil Makhmutov and Maria Tjani	1
On topological sequence entropy of piecewise monotonic mappings Jose S. Cánovas	21
On adelic automorphic forms with respect to a quadratic extension Ze-Li Dou	29
The Julia set of a random iteration system Ji Zhou	45
Relative continuity of direct sums of M-injective modules Liu Zhongkui and Javed Ahsan	51
Direct sums of indecomposable injective modules Sang Cheol Lee and Dong-Soo Lee	57
Regular polygons and transfinite diameter Michel Grandcolas	67
Common fixed point theorems for two mappings satisfying some conditions Jeong-Sheok Ume and Jong Kyu Kim	75
Bimodules for Cuntz-Krieger algebras of infinite matrices Wojciech Szymański	87
On totally umbilical QR-submanifolds of quaternion Kaehlerian manifolds Aurel Bejancu and Hani Reda Farran	95
Proving a group trivial made easy: A case study in coset enumeration George Havas and Colin Ramsay	105
The average distance property of classical Banach spaces Aicke Hinrichs	119
Hankel measures on Hardy space Jie Xiao	135
Some Engel conditions on infinite subsets of certain groups Alireza Abdollahi	141
Almost all extraspecial p-groups are swan groups David John Green and Pham Anh Minh	149
Inducing characters and nilpotent injectors Lucía Sanus	155
Decompositions of modules into projective modules and CS-modules Somyot Plubtieng	159
A sharp lower bound for the Ricci curvature of bounded hypersurfaces in space forms Alain R. Veeravalli	165

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Semilinear elliptic equations with critical nonlinearities Elliot Tonkes	171
Groups acting simply transitively on \tilde{A}_n buildings Tim Svenson	175
