
GLASGOW MATHEMATICAL JOURNAL

Edited by R. A. RANKIN, R. P. GILLESPIE, T. S. GRAHAM, A. GEDDES

Vol. II Part 2

Contents

July 1970

- M. J. Crabb, Numerical range estimates for the norms of iterated operators
K. H. Hyde, On the order of the Sylow subgroups of the automorphism group of a finite group
E. M. Wright, The number of irreducible tournaments
David A. Brannan, On univalent polynomials
George E. Andrews, Note on a partition theorem
Peter Kessler, On a theorem of Iseki
Carlton J. Maxson, On the dimension of Veblen-Wedderburn systems
J. W. Dettman, The wave, Laplace, and heat equations and related transforms
G. O. Okikiolu, On inequalities for integral operators
D. B. McAlister and L. O'Carroll, Finitely generated commutative semigroups
Nguyen Phuong Cúc, A note on Köthe spaces
C. R. Atherton, Concerning intrinsic topologies on Boolean algebras and certain bicomactly generated lattices
K. Chandrasekhara Rao, Matrix transformations of some sequence spaces—II
T. E. Hall, On the natural ordering of γ -classes and of idempotents in a regular semigroup

*Published twice yearly in January and July
The 1970 volume is number 11*

Annual subscription £3.25 U.S.A. \$10.00 Single part £1.30 U.S.A. \$4.00

Inquiries and subscription orders should be sent to the publishers

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields: such as frequency distributions, estimating and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possible contributions of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars; technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional "double abstracts" for papers where this size is not sufficient to represent the paper. The language is English; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published; moreover, a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in each issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

<i>Annual Subscription</i>	£10.00 (US \$30.00)
<i>Single Number</i>	£ 3.50 (US \$ 9.00)
<i>Loose Leaf Binders for Single Abstract Sheets</i>	£ 1.00 including postage and packing.

Topics in Interval Analysis

Edited by E. HANSEN

This book discusses methods for bounding errors in the computed solution to algebraic problems and in the solution of ordinary and partial differential equations and integral equations. There is a discussion of triplex arithmetic and a consideration of statistical distribution of error with application to linear programming. 10 text-figures £2.50

Variational Principles in Heat Transfer

A Unified Lagrangian Analysis of Dissipative Phenomena

MAURICE A. BIOT

This book presents a variational approach to irreversible processes leading to a unified analysis in terms of generalized coordinates and Lagrangian equations. The concept of a variational scalar product provides a generalization that embodies the more traditional viewpoint of the variational calculus and the principles of virtual work. £4.50 paper covers £2.25

An Introduction to the Theory of Functions of a Complex Variable

E. T. COPSON

Topics covered include the properties of one-valued differentiable functions of a complex variable, the problem of conformal representation, the elements of the theory of integral functions, the behaviour of some of the special functions of analysis, and the classical proof of Picard's Theorem. This paperback edition replaces the hardback version first published in 1935. Paper covers £1.50

Complementary Variational Principles

A. M. ARTHURS

The approach of this introduction to complementary variational principles, which are used to obtain upper and lower bounds for the solution of a variational problem, is based on the canonical form of Euler-Lagrange variational theory. £2.00 *Oxford Mathematical Monographs*

An Introduction to Current Algebra

D. H. LYTH

This book introduces the concepts of weak and electro-magnetic currents and the associated current algebra with its experimental implications. The emphasis is on the basic assumptions involved and the results to which they lead, rather than on the techniques by which the results are obtained. All aspects up to and including 'hard-meson techniques' are considered. 15 text-figures paper covers 90p *Oxford Library of Physical Sciences*

Collected Papers of G. H. Hardy

Including Joint Papers with J. E. Littlewood and others:
Volume IV

Edited by a Committee appointed by the London Mathematical Society

Frontispiece £6.00

OXFORD UNIVERSITY PRESS
