Acta Neuropsychiatria: ‘A new beginning’

The first issue in volume 25 marks not only the transition of *Acta Neuropsychiatria* to the *Scandinavian College of Neuropsychopharmacology (SCNP)*, as mentioned earlier (1, 2), but also welcomes our new publisher, *Cambridge University Press (CUP)*.

CUP will support *Acta Neuropsychiatria* with the same high quality and efficiency as our previous publisher, *John Wiley & Sons*, and will help to further develop the journal in an increasingly competing market. Both the *SCNP* and the editors are excited about partnership with *CUP*, which corroborates the strong ambitions of the *SCNP*.

CUP is a not-for-profit organisation, which currently publishes over 300 peer-reviewed academic journals for the global market. The journals contain the latest research from a broad sweep of subject areas. *CUP* journals are accessible worldwide in print and online.

Despite the Scandinavian connection between *Acta Neuropsychiatria* and *SCNP*, the true playground of the journal is worldwide, making the match with *CUP* perfect. This is clearly illustrated in the current issue with contributions from India, China, Brazil, Iran, USA, Colombia, Taiwan, Sweden and Switzerland.

As stated in the aims of *Acta Neuropsychiatria*, we welcome reviews, original research articles, short communications, case reports and debate papers. The overall continued purpose of *Acta Neuropsychiatria* is to provide our readers with the latest, preferentially translational, perspectives from current and emerging areas, across all disciplines and fields relevant to neuropsychiatry.

I welcome all of you to this ‘Scandinavian’ version of *Acta Neuropsychiatria*, encouraging basic and clinical scientists to submit their research to us. I would also welcome any suggestions that readers may have to further improve the journal.

Gregers Wegener

Editor-in-Chief, Acta Neuropsychiatria
Aarhus University, Denmark
