

ADVANCES IN PARASITOLOGY

Volume 12

Organized and edited by

BEN DAWES

Professor Emeritus, University of London, England

October/November 1974 xii + 432 pp., £10.50/\$27.75 0.12.031712.5

Contents

A. Murray Fallis, Sherwin S. Desser and Rasul A. Khan: On species of *Leucocytozoon*. Wallace Peters: Recent advances in antimalarial chemotherapy and drug resistance. M. A. Stirewalt: *Schistosoma mansoni*: cercaria to schistosomule. D. F. Mettrick and R. B. Podesta: Ecological and physiological aspects of helminth-host interactions in the mammalian gastrointestinal canal. J. F. Michel: Arrested development of nematodes and some related phenomena. Short Review: Naftale Katz and J. Pellegrino: Experimental chemotherapy of schistosomiasis mansoni.

Author index. Subject index.

From reviews of previous volumes

'The publication of each successive volume of *Advances in Parasitology* is keenly anticipated by parasitologists throughout the world. These authoritative reviews, which have been edited by Professor Ben Dawes since the first volume was published in 1963 are widely acclaimed as outstanding contributions to the subject . . .'

G. S. Nelson in Tropical Diseases Bulletin

'The volumes in this series are essential equipment for any establishment engaged in teaching parasitology or in research on any parasitological problem.'

M. G. Christie in The British Veterinary Journal

'There are certain reviews that one looks forward to receiving with special pleasure, and to the parasitologist this is exemplified par excellence by Ben Dawes's yearly pocket masterpiece *Advances in Parasitology*.' *W. Peters in The British Medical Journal*

Genetic Control of Insect Pests

G. DAVIDSON

London School of Hygiene and Tropical Medicine, London, England

August 1974, x+158 pp., £4.00/\$10.25

0.12.205750.3

This is the first book to consider, together, all the genetic methods for controlling insect pests of agricultural, veterinary and medical importance, which have so far been developed to the point of practical application. As such it will be of the greatest interest to entomologists working in these fields, to doctors concerned with preventive medicine and to biologists and those with a more general interest in entomology and genetics.

Most of the methods considered involve the mass rearing of particular species, irradiation, chemosterilization or hybridization and then release into the wild population. Success depends on these insects mating with the wild populations, leading to reductions in fertility and perhaps to populations being eliminated. More involved techniques make use of naturally existing incompatibles, or introduce genes which are harmful to the wild population but favourable to man. The replacement of a naturally occurring population with one previously rendered harmless by genetic manipulation, is also discussed.

Contents

Introduction

The principles and dynamics involved in the sterile insect technique

Mass-rearing. Sterilization. Release. Dynamics.

Sterilization by irradiation

Livestock pests. Agricultural pests. Public health pests. Radiation resistance.

Chemosterilants

Public health pests. Agricultural pests.

Hybrid sterility

Anopheline mosquitoes. The *Aedes mariae* complex. Tsetse fly crosses. *Telegryllus* crosses. Reduviid bug crosses.

Cytoplasmic incompatibility

The *Culex pipiens* complex. The *Aedes scutellaris* complex.

Translocations

General considerations. Dynamics. The isolation of translocations. Compound chromosomes.

Other methods of genetic control

Lethal factors. Meiotic drive and sex distortion. Species replacement.

Summary and conclusion

References. Subject index.

SUBSCRIPTIONS may be sent to any bookseller or subscription agent or direct to Cambridge University Press, P.O. Box 92, London NW1 2DB. Subscriptions in the U.S.A. and Canada should be sent to Cambridge University Press, 32 East 57th Street, New York, N.Y. 10022. The 1974 subscription price is £11.00 net (including postage) for a volume of three parts (US \$35.00 in the U.S.A. and Canada), payable in advance (£22.00 or US \$70.00 per year); separate parts cost £5.00 net or US \$15.00 each (plus postage).

BACK VOLUMES. Vols. 1-39: Inquiries should be addressed to Wm Dawson & Sons Ltd, Cannon House, Folkestone, Kent. Vols. 40 onwards: Quotations for parts still in print may be obtained from the London or New York offices of the Cambridge University Press.

FOR PERMISSION to reproduce material from *Parasitology*, please apply to the London or New York office of Cambridge University Press.

ISI TEAR SERVICE, 325 Chestnut Street, Philadelphia, Pennsylvania 19106, U.S.A. is authorized to supply single copies of separate articles for private use only.

CLAIMS for missing issues can only be considered if made immediately after receipt of the subsequent issue.

ADVERTISING. Details of advertising in *Parasitology* may be obtained from the publisher.
