What do you look for in a patient support system?

Obviously, your relationship with your patients and the treatment programmes you determine for them are of paramount importance.

But a key element in any treatment programme is a complete and effective system that implements your decisions regarding patient care.

A system tailored within broad parameters to meet individual patient needs, covering a wide range of psychiatric disorders as well as drug addiction and alcoholism.

And it should be carried out by experienced staff – resident medical officers, trained psychiatric nurses, therapists and counsellors – who can design and implement a treatment

programme in your absence or complement your own.

In other words, a support system like ours, based on years of international experience within a caring and supportive environment.

Because after all, a good patient care system is one that helps you help your patients recover.

For further information, please call the Administrator on 01-351 1272.

Charter Clinic Hampstead, 11 Fellows Road, London NW3 3LA.

Charter Clinics
Helping people help themselves

Charter Clinics are licensed by the appropriate Health Authorities and are recognised by all the major medical insurance companies.

PART OF THE LARGACTIL HERITAGE

chlorpromazine

May and Baker's record of innovation in psychotropic medicines includes the first, major tranquilliser, Largactil, and now Piportil Depot — arguably the most useful of the depot neuroleptics in terms of:

Efficacy

against a wide range of target symptoms of schizophrenia.

Convenience

for patients, medical and nursing staff because of a full, four-week duration of activity.

Acceptability

because of its greater freedom from extra-pyramidal effects than other depot neuroleptics^{1,2,3,4}

Experience

which comes from both short and long-term studies performed in the U.K. and worldwide.

Piportil

DEPOT PIPOTHIAZINE PALMITATE

HELPING TO SOLVE THE PUZZLES OF SCHIZOPHRENIA

PRESCRIBING INFORMATION

Dosage:

(Adults) Initially 25mg (0.5ml) by deep intramuscular injection into the gluteal region to assess susceptibility of patient. Dosage should be increased by increments of 25 or 50mg at appropriate intervals until a satisfactory response is obtained. Most patients respond to a dose of 50-100mg (1-2ml) every 4 weeks. Patients should be stabilised under psychiatric supervision.

Contra-indications:

Marked cerebral atherosclerosis, phaeochromocytoma, renal or liver failure, severe cardiac insufficiency or hypersensitivity to other phenothiazine derivatives.

Precautions:

A history of convulsive disorders or marked extra-pyramidal reactions to oral phenothiazines, in pregnancy and lactation.

Side-effects:

Reversible extra-pyramidal reactions, sleep disturbance, depression, blurred vision, asthenia, impotence, dry mouth, nausea, amenorrhoea, galactorrhoea, hypotension, hyperhidrosis and weight gain have been observed occasionally. Corneal or lenticular cloudiness have not been observed with Piportil alone, but in treatment with phenothiazine preparations in high dosage over a long period, there is a risk of such side-effects occurring. Local reactions at site of injection are rare.

Presentations and Basic N.H.S.

Prices

Box of 10 x 1ml ampoules (5mg) £53.70. Box of 10 x 2ml ampoules (100mg) £87.875 (PL0012/0017)
