Ownership and Publication of *Mathematika*

Mathematika was founded in the early 1950s by Harold Davenport and is owned by University College London. Since 2010, the journal has been published on behalf of its owner by the London Mathematical Society (LMS). The LMS is the major British learned Society for mathematics and publishes twelve other journals, five of which are in collaboration with other learned societies. Cambridge University Press prints and distributes *Mathematika* under agreement with the London Mathematical Society.

All articles, including the full archive dating back to 1954, are available electronically via Cambridge Journals Online.

Aims and Scope

Mathematika publishes both pure and applied mathematical articles of the highest quality. The traditional emphasis has been towards the purer side of mathematics but applied mathematics and articles addressing both aspects are equally welcome.

Submission of Manuscripts

Authors wishing to submit a paper for publication should follow the guidelines available via the webpage http://www.lms.ac.uk/publications.

Authors will be asked to assign copyright to University College London prior to publication.

No paper should have been published or be under consideration for publication elsewhere. Nor may the paper be submitted elsewhere while it remains under consideration by *Mathematika*.

Offprints

A URL giving free access to the final published article will be provided free of charge. Offprints can be ordered on the form which will accompany the page proofs.

Printed back numbers

Orders for volume 56 (2010) onwards should be sent to Cambridge University Press. Printed copies of volume 55 (2009) and earlier volumes are available from the Department of Mathematics, University College London. Please contact mathematika@math.ucl.ac.uk.

Copying

This journal is registered with the Copyright Clearance Centre, 222 Rosewood Drive, Danvers, MA 01923, USA. Organizations in the USA that are registered with the CCC may therefore copy material beyond the limits permitted by sections 107 and 108 of US copyright law subject to payment to CCC of the per-copy fee. This consent does not extend to multiple copying for promotional and commercial purposes. Code 0025-5793/2014.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions. For all other use, permission should be sought from Cambridge or the American branch of Cambridge University Press.

Published by the London Mathematical Society on behalf of University College London.

Typeset by Sunrise Setting Ltd, Paignton, UK.
Printed in the UK by Bell and Bain Ltd.

Mathematika

VOLUME 60 PART 1 JANUARY 2014

Jonathan Pila Special point problems with elliptic modular surfaces 1–31

Christian Reiher and **Lisa Sauermann** Nash-Williams' theorem on decomposing graphs into forests 32–36

Andrew Suk A note on order-type homogeneous point sets 37–42

Mitsuo Kobayashi and **Paul Pollack** The error term in the count of abundant numbers 43–65

Michael A. Bennett and **Yann Bugeaud** Perfect powers with three digits 66–84

Zafer Şiar and **Refik Keskin** The square terms in generalized Lucas sequences 85–100

T. D. Browning Counting rational points on cubic hypersurfaces: Corrigendum 101–107

James Maynard Almost-prime k-tuples 108–138

Nick Gravin, Fedor Petrov, Sinai Robins and **Dmitry Shiryaev** Convex curves and a Poisson imitation of lattices 139–152

John B. Friedlander and **Trevor D. Wooley** On Waring's problem: two squares and three biquadrates 153–165

Andreas O. Bender Representing an element in $\mathbf{F}_q[t]$ as the sum of two irreducibles 166–182

Ambrus Pál On the nilpotent section conjecture for finite group actions on curves 183–200

Pierre Youssef Restricted invertibility and the Banach–Mazur distance to the cube 201–218

D. Freeman, E. Odell, B. Sari and **Th. Schlumprecht** Equilateral sets in uniformly smooth Banach spaces 219–231

Biagio Ricceri A range property related to non-expansive operators 232–236

Gábor Domokos and **Zsolt Lángi** The robustness of equilibria on convex solids 237–256
