

VOLUME 104 SUPPLEMENT 1992

Parasitology

Symposia of the British Society for Parasitology Volume 29

**Human parasitic disease: the
complementary roles of field and
laboratory studies**

EDITED BY D. A. P. BUNDY

CO-ORDINATING EDITOR L. H. CHAPPELL

CAMBRIDGE UNIVERSITY PRESS

Subscriptions may be sent to any bookseller or subscription agent or direct to the publisher: Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU. Subscriptions in the USA and Canada should be sent to Cambridge University Press, Journals Department, 40 West 20th Street, New York, NY 10011-4211. All orders must be accompanied by payment. The subscription price of volumes 104 and 105, 1992 is £190 (US \$375 in the USA and Canada), payable in advance, for six parts plus supplements; separate parts cost £27 or US \$50 each (plus postage). Second class postage paid at New York, NY and at additional mailing offices. POSTMASTER: send address changes in USA and Canada to *Parasitology*, Cambridge University Press, 110 Midland Avenue, Port Chester, New York, NY 10573-9864.

Contents

<i>Preface</i>	S1	Parasite diversity in the field	S37
<i>List of contributions</i>	S3	Spatial scale of <i>P. falciparum</i> populations	S38
<i>Chairman's opening remarks</i>	S5	The genetic structure of malaria populations	S39
LEISHMANIASIS		Field surveys: diversity	S40
Leishmaniasis epidemiology: the theory catches up	S7	Field surveys: linkage equilibrium?	S40
Summary	S7	Non-random selection of genotypes	S41
Introduction	S7	Field evidence of frequent self-fertilization	S42
Persistence and resilience of canine visceral leishmaniasis	S8	Female-biased gametocyte sex ratios	S42
Virulence polymorphisms in <i>Leishmania</i> populations	S12	Frequent single-clone infections imply frequent selfing	S43
Cycles of kala-azar?	S14	Fewer mixed infections than expected in a panmictic population	S44
Matters arising	S16	How much self-fertilization is consistent with apparent panmixia?	S44
References	S17	Future directions of population genetic research	S45
Leishmaniasis epidemiology: all down to the DNA	S19	Population dynamics of <i>P. falciparum</i>	S45
Summary	S19	<i>P. falciparum</i> allelotypes/serotypes	S45
Introduction	S19	Dynamic analysis	S45
Molecular diagnostics	S19	Future directions	S48
DNA probes	S19	Overview and concluding remarks	S48
PCR for kinetoplastid DNA	S20	Appendix 1	S49
Polymorphism in the parasite population	S21	References	S49
Field evidence of virulence polymorphisms	S21	Malaria – a neglected disease?	S53
Virulent and avirulent clones of <i>L. mexicana</i>	S21	Summary	S53
Alternative candidates for molecular determinants of virulence	S21	Introduction	S53
Polymorphism in the host	S23	Malaria in endemic populations	S53
Field evidence for resistance polymorphisms	S23	Risk factors for severe malaria	S55
Mapping susceptibility genes using murine models of disease	S23	Vector-related factors	S56
<i>Lsh</i> – a gene regulating macrophage priming/activation	S24	Parasite factors	S56
Reverse genetic approach to cloning <i>Lsh</i>	S25	Host factors and severe disease	S59
Evidence for an <i>Lsh</i> gene homologue in man	S26	Red cell polymorphisms	S59
Conclusions	S29	Genes controlling host responses to infection	S60
References	S29	Endothelial receptors for sequestration	S60
MALARIA		Socio-economic and behavioural factors	S61
Population genetics and dynamics of <i>Plasmodium falciparum</i>: an ecological view	S35	Nutrition status	S61
Summary	S35	Immunity to malaria	S61
Introduction	S35	Immunity to malaria and parasite polymorphisms	S61
Antigenic diversity of <i>P. falciparum</i>	S36	Severe malaria: the pathogenic process	S62
		Cerebral sequestration – the basic problem?	S63
		Cytokines and malaria	S63
		Hypoglycaemia and lactic acidosis	S64
		Raised intracranial pressure and severe malaria	S64
		Trying it together	S65
		Conclusions	S65
		References	S65

LYMPHATIC FILARIASIS		GEOHELMINTHIASIS	
The Wellcome Trust Lecture	S71	Intestinal nematode infections in children: the pathophysiological price paid	S91
Infection and disease in lymphatic filariasis: an immunological perspective	S71	Summary	S91
Summary	S71	Introduction	S91
Introduction	S71	Animal hosts: the price paid for worm expulsion	S91
Clinical forms of lymphatic filarial disease	S72	Human disease	S92
Acute lymphatic inflammation	S72	Larval migration phase	S92
Chronic lymphatic pathology	S72	Hookworm (<i>Ancylostoma duodenale</i> and <i>Necator americanus</i>)	S92
Tropical pulmonary eosinophilia	S72	Roundworm (<i>Ascaris lumbricoides</i>)	S92
Asymptomatic microfilaraemia	S72	Adult helminths in intestine	S93
Principles of pathogenesis	S73	Hookworm	S93
Immunological hypo-/hyper-responsiveness	S73	Roundworm (ascariasis)	S94
The role of the parasite in the induction of lymphatic pathology	S75	Whipworm (trichuriasis)	S95
Determinants of pathology	S76	(1) Anaemia – relationship to worm burden	S95
Antigen processing is innately different in different individuals	S76	(2) Growth retardation – relationship to worm burden	S95
Pre-natal experience with filarial antigen determines the subsequent character of the immune response to post-natal infection	S76	(3) Inflammation	S96
The type of antigen exposure (frequent low-dose, intermittent high-dose) determines the character of the response to filarial parasites	S77	(4) Anaphylaxis	S98
Conclusion	S77	(5) Plasma protein loss and abnormal intestinal permeability	S99
References	S78	(6) Cognitive function	S100
Infection and disease in lymphatic filariasis: an epidemiological approach	S81	Conclusions	S100
Introduction	S81	References	S100
Dynamics of infection and disease	S81	Immuno-epidemiology of human geohelminthiasis: ecological and immunological determinants of worm burden	S105
Macro- and microfilarial dynamics	S82	Summary	S105
The relationship between macro- and microfilarial intensity	S82	Introduction	S105
Microfilarial dynamics in the field	S82	Time and age dependency of infection	S106
Transmission dynamics	S83	Patterns of infection	S106
Prevalence or intensity?	S83	Age dependency in exposure	S109
Catalytic infection models	S83	Age dependency in susceptibility	S109
Dynamics of chronic disease	S84	Age–intensity profiles as a function of exposure and susceptibility	S110
Epidemiological consequences of immunological tolerance	S86	Heterogeneity in individual infection	S112
The infection model	S86	Patterns of infection	S112
Predicted patterns of infection	S86	Heterogeneity in exposure to infection	S113
Clinical perspective	S88	Heterogeneity in susceptibility to infection	S114
Conclusions	S88	The individual in the family and the household	S114
References	S89	Conclusions	S115
		References	S116
		Chairman's concluding remarks	S121
