

## Quantum Algorithms

The 1994 discovery of Shor's quantum algorithm for integer factorization—an important practical problem in the area of cryptography—demonstrated quantum computing's potential for real-world impact. Since then, researchers have worked intensively to expand the list of practical problems that quantum algorithms can solve effectively.

This book surveys the fruits of this effort, covering proposed quantum algorithms for concrete problems in many application areas, including quantum chemistry, optimization, finance, and machine learning. For each quantum algorithm considered, the book clearly states the problem being solved and the full computational complexity of the procedure, making sure to account for the contribution from all the underlying primitive ingredients. Separately, the book provides a detailed, independent summary of the most common algorithmic primitives. It has a modular, encyclopedic format to facilitate navigation of the material and to provide a quick reference for designers of quantum algorithms and quantum computing researchers.

ALEXANDER M. DALZELL is a Research Scientist at the Amazon Web Services Center for Quantum Computing.

SAM McARDLE is a Research Scientist at the Amazon Web Services Center for Quantum Computing.

MARIO BERTA is a Professor of Physics at the Institute for Quantum Information at RWTH Aachen University and a Visiting Reader in the Department of Computing at Imperial College London.

PRZEMYSŁAW BIENIAS is a Research Scientist at the Amazon Web Services Center for Quantum Computing.

CHI-FANG CHEN is a Postdoctoral Scholar in the Department of Electrical Engineering and Computer Sciences at the University of California, Berkeley.

ANDRÁS GILYÉN is a Research Fellow in the Department of Probability and Statistics at the HUN-REN Alfréd Rényi Institute of Mathematics.

CONNOR T. HANN is a Senior Research Scientist at the Amazon Web Services Center for Quantum Computing.

MICHAEL J. KASTORYANO is an Associate Professor of Quantum Computing at the University of Copenhagen and an Amazon Visiting Academic at the Amazon Web Services Center for Quantum Computing.

EMIL T. KHABIBOULLINE is a National Resource Council Postdoctoral Associate at the Joint Center for Quantum Information and Computer Science (QuICS) of the University of Maryland, College Park, and the National Institute of Standards and Technology.

ALEKSANDER KUBICA is an Assistant Professor in the Department of Applied Physics at Yale University.

GRANT SALTON is a Senior Research Scientist at the Amazon Quantum Solutions Lab and the Amazon Web Services Center for Quantum Computing.

SAMSON WANG is a Postdoctoral Scholar at the Institute for Quantum Information and Matter at Caltech.

FERNANDO G. S. L. BRANDÃO is Director of Quantum Applications at the Amazon Web Services Center for Quantum Computing and Bren Professor of Theoretical Physics at Caltech.
