

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using AMS-TEX . Authors who are able to do so are invited to prepare their manuscripts using TEX . (We accept Plain TEX , AMS-TEX or LATEX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Some results on principal eigenvalues for periodic parabolic problems with weight	
U. Kaufman	177
Compact composition operators on Bloch spaces	
Chengji Xiong	185
Hyperconvex spaces revisited	
Marcin Borkowski, Dariusz Bugajewski and Hubert Przybycień	191
Characterisations of Bloch functions in the unit ball of \mathbb{C}^n, I	
Zengjian Lou and Hasi Wulan	205
Open Engel manifolds admitting compact characteristic leaves	
Takashi Inaba	213
Linear maps leaving invariant subsets of nonnegative symmetric matrices	
Hanley Chiang and Chi-Kwong Li	221
On numbers which are differences of two conjugates over Q of an algebraic integer	
T. Zaimi	233
Local compactness in free topological groups	
Peter Nickolas and Mikhail Tkachenko	243
Best approximation by polynomials	
Sung Guen Kim	267
On 3-dimensional contact slant submanifolds in Sasakian space forms	
Ion Mihai and Yoshihiko Tazawa	275
Group gradings of $M_2(K)$	
R. Khazal, Crina Boboc and S. Dăscălescu	285
Vector quasi-equilibrium problems	
Abdul Khaliq and Sonam Krishan	295
The generalised Hadamard inequality, g convexity and functional Stolarsky means	
E. Neuman, C.E.M. Pearce, J. Pečarić and V. Šimić	303
A presentation for the monoid of uniform block permutations	
D.G. FitzGerald	317
Connes-amenability and normal, virtual diagonals for measure algebras, II	
Volker Runde	325
Contact and quasiconformal mappings on real filiform groups	
Ben Warhurst	329
On uniformly distributed sequences of integers and Poincaré recurrence III	
R. Nair	345

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Hardy spaces of exact forms on domains	
Zengjian Lou	351
