CONTENTS

	PAGE
BONSALL, F. F. AND TOMIUK, B. J. The semi-algebra generated by a compact linear operator	177
BOOK REVIEWS	81, 167, 245, 339
BOWEN, N. A. On the limit of the modulus of a bounded regular function	21
BOWEN, N. A. On mean value limits for bounded regular functions	103
BOYER, R. H. On Kilmister's conditions for the existence of linear integrals of dynamical systems	243
BURLAK, J. On the non-existence of L^2 solutions of a class of non-linear differential equations	257
CHAMBERS, LL. G. Long waves on a rotating earth in the presence of a semi-infinite barrier	25
CHEN, YUNG-MING. A criterion for absolute Cesàro summability of negative order of a Fourier series	311
ETHERINGTON, I. M. H. Quasigroups and cubic curves	273
GONSHOR, HARRY. Special train algebras arising in genetics II	333
HOWIE, J. M. The maximum idempotent-separating congruence on an inverse semigroup	71
HUTSON, V. Asymptotic solutions of integral equations with convolution kernels	5
INGRAM, W. H. The linear j -differential equation	211
JACK, HENRY. A generalisation of Dirichlet's multiple integral	233
JACKSON, F. The solution of problems involving the melting and freezing of finite slabs by a method due to Portnov	109
KNOPS, R. J. Further considerations of the elastic inclusion problem	61
LOSEY, GERALD. A class of homomorphism theories for groupoids	129
LOWNDES, J. S. Integrals involving Bessel and Legendre functions	269
MACBEATH, A. M. On measure of sum sets III: correction	165

MACKIE, A. G. Green's functions and Riemann's method	293
MCLEOD, R. M. Mean value theorems for vector valued functions	197
MARCHI, E. AND ZGRABLICH, G. Heat conduction in hollow cylinders with radiation	159
MINC, HENRYK AND SATHRE, LEROY. Some inequalities involving $(r!)^{1/r}$	41
OBITUARY NOTICE. J. H. SMITH	87
PATTERSON, E. M. Commutation problems involving rings of infinite matrices	55
PUGH, H. LL. D. The temperature distribution in a semi-infinite solid whose surface is maintained at an arbitrary temperature	143
ROBERTSON, M. M. A generalisation of a result of Abel with an application to tree enumerations	239
SANDS, A. D. Primitive rings of infinite matrices	47
SHAIL, R. On some steady state thermoelastic stress distributions in a slab	303
SINGH, R. P. A note on double transformations of certain hypergeometric functions	221
SRIVASTAV, R. P. A pair of dual integral equations involving Bessel functions of the first and the second kind	149
SRIVASTAV, R. P. Certain two-dimensional mixed boundary-value problems for wedge-shaped regions and dual integral equations	321
TAUBER, SELMO. On generalised Lah-numbers	229
WILLIAMS, W. E. Approximate solutions of boundary value problems in potential theory with applications to electrostatics and elastostatics	89
WILSON, R. An extension of the almost isolated singularity of finite exponential order	137
WIMP, JET: A class of integral transforms	33
YFF, PETER: On k -conjugacy in a group	1

The *Edinburgh Mathematical Notes* appear at the end of each part

*Stanford Studies in
Mathematics and
Statistics IV*

Studies in Mathematical Analysis and Related Topics

Essays in Honour of George Pólya

EDITED BY GABOR SZEGO
AND OTHERS

This volume consists of sixty research papers, all published here for the first time, by leading mathematicians from the United States and Europe. It will be of interest to both pure and applied mathematicians and to theoreticians in allied sciences. 80s net
(Stanford University Press)

*Oxford Mathematical
Monographs*

The Theory of Laminar Boundary Layers in Compressible Fluids

K. STEWARTSON

The aim of this book is to give an account of the present position of the theory. It deals with the principles underlying the derivation of the equations, and the properties of the two-dimensional steady boundary layers; with three-dimensional boundary layers; time-dependent problems, interaction between the boundary layers and the main stream. Attention is restricted throughout to perfect fluids, and the question of instability is not discussed. 63s net

Tomorrow's Math Unsolved Problems for the Amateur

C. STANLEY OGILVY

The author describes, in terms intelligible to the amateur, more than 150 unsolved problems in all branches of mathematics. Numerous line figures 35s net

Linear Programming and Extensions

GEORGE B. DANTZIG

A book for both mathematicians and all who are interested in the possibilities of using computers for taking decisions in economic, industrial and administrative life. The author is a pioneer in the field of linear programming. 92s net
(Princeton University Press)

Quantum Mechanics

for Mathematicians and Physicists

ERNEST IKENBERRY

This book is intended for physicists with a minimum of mathematics and mathematicians with little or no background in physics. It presents the elements of the mathematical theory of quantum mechanics with sufficient applications to give substance to the theoretical framework. 64s net

UNIVERSITY PRESS

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The aim of this journal of abstracts is to give **complete coverage of published papers in the field of statistical theory** (including associated aspects of probability and other mathematical methods) and **new published contributions to statistical method**.

There are approximately two hundred and fifty journals published in various parts of the world which are wholly or partly devoted to the field of statistical theory and method and which are brought within the scope of this journal of abstracts.

In addition to the vast array of journal literature, abstracts of the special collections of papers as published in reports of conferences symposia and seminars, together with the published reports of experiment and other research stations, are also included.

The abstracts are about 400 words long—the recommendation of UNESCO for the “long” abstract service: they are in the English language although the original language of the paper is noted on the abstract together with the name of the abstractor. In addition the address of the author(s) are given in detail to facilitate contact in order to obtain further detail or request an off-print. **The journal is published quarterly and contains approximately 1,000 abstracts per year.**

A scheme of classification has been developed for the abstracts that is flexible and facilitates the transfer of code numbers to punched cards. **A unique aspect of this journal** is that the pages are colour-tinted according to the main sections of classification. This method of colour-coding the pages provides a distinctive and powerful visual aid in the identification of abstracts in whatever manner the journal is filed for reference.

<i>Annual Subscription</i>	£5 (U.S.A. \$16.00)
<i>Single Number</i>	30s. (U.S.A. \$4.50)

Proceedings of the Glasgow Mathematical Association

Editorial Committee : R. A. RANKIN, R. P. GILLESPIE, T. S. GRAHAM
Department of Mathematics, The University, Glasgow

Volume 6. Part 3. January 1964

- J. BURLAK. On Gordon's method of solving dual integral equations.
W. E. WILLIAMS. The solutions of dual series and dual integral equations.
R. K. SAXENA. Integral involving products of Bessel functions.
B. ROTMAN. A note on principal sequences.
C. J. TRANTER. An improved method for dual trigonometrical series.
D. M. E. FOSTER. On generating points of a lattice in the region
 $|x_1^2 + x_2^2 - x_3^2| \leq 1$.
P. R. KHANDEKAR. A note on the associated Legendre polynomials

The proceedings are published twice yearly, four parts comprising a volume of about 200 pages. The subscription price per volume is £3 (\$10.00), post free, payable in advance. Single parts may be supplied at a cost of 15s. (\$2.50) net.

Inquiries and subscription orders should be sent to the publishers
