(Received 30 August 2024; accepted 3 September 2024)

This special issue of *Mathematical Structures in Computer Science* (MSCS) collects together extended and improved versions of papers presented at the twenty-eighth Workshop on Logic, Language, Information and Computation (WoLLIC 2022), held at Iași, Romania, September 20–23, 2022, hosted by the Faculty of Computer Science, Alexandru Ioan Cuza University.

WoLLIC is an annual international forum on inter-disciplinary research involving formal logic, computing and programming theory, and natural language and reasoning. Each meeting includes invited talks, tutorials and contributed papers. Contributions are invited on all relevant subjects of Logic, Language, Information and Computation, with particular interest in cross-disciplinary topics.

The proceedings of this 28th edition with the submissions selected by the programme committee were published as volume 13468 of Springer’s *Lecture Notes in Computer Science*/ (FoLLI subseries).

This special issue contains selected contributions that were extended and fully reviewed for publication in MSCS. The authors were asked to submit a longer and more detailed version. All papers were refereed in accordance with the usual high standards of MSCS, and seven of the received submissions have been accepted for publication in this issue. We would like to thank the authors for their excellent submissions which we are happy to present. They showcase the broadness of research interests within the WoLLIC community.

The guest editors would like to thank the programme committee, the steering committee, the external reviewers and the reviewers of the papers submitted to this special issue for their excellent work, as well as for the constructive discussions. Finally, we would like to thank the editors of MSCS for all their help and support.
