

The following papers have been accepted for publication and will appear shortly:

WATSON, G. L. Cubic forms representing arithmetic progressions.

PETERSEN, G. M. Summability and bounded sequences.

JAMBS, I. M. On Lie groups and their homotopy groups.

GANBA, T. and HILTON, P. On the decomposition of spaces in Cartesian products and unions.

JACK, H. and MCBEATH, A. M. The volume of a certain set of matrices.

KRISHNA IYER, P. V. and SHAKUNTALA, N. S. Cumulants of some distributions arising from a two-state Markoff chain.

NASH-WILLIAMS, C. ST J. A. Abelian groups, graphs and generalized knights.

LEARNER, A. Hubert's function in a semi-lattice.

CASSELS, J. W. S. Note on quadratic forms over the rational field.

BATJMSLAG, G. Wreath products and p-groups.

## CONTENTS OF BIOLOGICAL REVIEWS

Vol. 34, No. 2. May 1959

JOHN H. STEELE. The quantitative ecology of marine phytoplankton.

J. F. SJTOLIFFE. Salt uptake in plants.

SHELBY D. GEBKING. The restricted movement of fish populations.

ELIZABETH G. CUTTER. On a theory of phyllotaxis and histogenesis.

# CONTENTS

	PAGE
ROSE, ALAN. A note on the representation of general recursive functions and the $\mu$ quantifier . . . . .	145
HILTON, P. J. and LEDERMANN, W. Homology and ringoids. II . . . . .	149
BURGESS, D. C. J. Generalized intervals in partially ordered groups . . . . .	165
PAPERT, S. Which distributive lattices are lattices of closed sets? . . . . .	172
SACK, R. A. Equivalence of two absorption problems with Markovian transitions and continuous or discrete time parameters . . . . .	177
NASH WILLIAMS, C. ST J. A. Random walk and electric currents in networks . . . . .	181
WILLIAMS, W. E. Diffraction by an imperfectly conducting right-angled wedge . . . . .	195
RESEARCH NOTE	
MCANDREW, M. H. Note on a problem of Erdős . . . . .	210

*Printed in Great Britain at the University Press, Cambridge  
(Brooke Crutchley, University Printer)*
