

## Subscription rates

Subscription rates for volume 39 (2007) of *Advances in Applied Probability* (AAP) are as follows (post free and including online access at <http://projecteuclid.org/aap/>): US\$330.00; A\$435.00; £180.00 for libraries and institutions; or US\$110.00; A\$145.00; £60.00 for individuals belonging to a recognised scientific society. The subscription rates for volume 44 (2007) of *Journal of Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 272 9782; email [s.c.boyles@sheffield.ac.uk](mailto:s.c.boyles@sheffield.ac.uk)). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

## Notes for contributors

Papers published in *Advances in Applied Probability* (AAP) are of six kinds: (i) *review papers*; (ii) *longer research papers* in applied probability, which may include expository material; (iii) *expository papers* on branches of mathematics of interest to probabilists; (iv) *papers outlining areas in the biological, physical, social and technological sciences* in which probability models can be usefully developed; (v) *papers in applied probability* presented at conferences that do not publish their proceedings; or (vi) *letters to the Editor* on any appropriate topic in applied probability. In addition, contributions relating to *stochastic geometry and statistical applications* will appear in the SGSA section of AAP. *Shorter research papers* and *short communications* are published in *Journal of Applied Probability*, the companion publication, as are *letters* relating specifically to papers that have appeared there.

It is the policy not to accept for publication papers that cannot appear in print within 15 months of the date of receipt of the final version. In order to meet this deadline, an accepted paper may be published in either journal, according to the space available.

Fifty offprints of each paper will be provided free, with additional offprints available at cost.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Papers should be written in English or French; papers in other languages may be accepted, but will appear (subject to the author's agreement) in English or French translation.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2000 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as hard copy or as electronic files (with hard copy back-up). All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send **all** submissions to the Applied Probability office in Sheffield, and not to individual editors. Two copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** Postscript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is [l.nash@sheffield.ac.uk](mailto:l.nash@sheffield.ac.uk). Authors should also submit one hard copy to the Executive Editor, as above.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Centre (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0001-8678/07

*Stochastic Geometry and Statistical Applications*

- 853 AYALVADI GANESH AND FENG XUE. On the connectivity and diameter of small-world networks
- 864 LARS MICHAEL HOFFMANN. On weak stationarity and weak isotropy of processes of convex bodies and cylinders
- 883 VIKTOR OLSBO. On the correlation between the volumes of the typical Poisson–Voronoi cell and the typical Stienen sphere
- 893 EMMANUEL ROY. Bartlett spectrum and mixing properties of infinitely divisible random measures

*General Applied Probability*

- 898 IDRIS MAOUI, HAYRIYE AYHAN AND ROBERT D. FOLEY. Congestion-dependent pricing in a stochastic service system
- 922 TOM BRITTON, SVANTE JANSON AND ANDERS MARTIN-LÖF. Graphs with specified degree distributions, simple epidemics, and local vaccination strategies
- 949 FRANK BALL AND TOM BRITTON. An epidemic model with infector-dependent severity
- 973 PEDRO J. FERNÁNDEZ, PABLO A. FERRARI AND SEBASTIAN P. GRYNBERG. Perfectly random sampling of truncated multinormal distributions
- 991 FROSSO S. MAKRI, ANDREAS N. PHILIPPOU AND ZAHARIAS M. PSILLAKIS. Success run statistics defined on an urn model
- 1020 SOFIA ÅBERG. Wave intensities and slopes in Lagrangian seas
- 1036 F. C. KLEBANER, U. RÖSLER AND S. SAGITOV. Transformations of Galton–Watson processes and linear fractional reproduction
- 1054 I. RAHIMOV. Functional limit theorems for critical processes with immigration
- 1070 J. BLANCHET AND P. GLYNN. Uniform renewal theory with applications to expansions of random geometric sums
- 1098 EITAN BACHMAT, DANIEL BEREND, LUBA SAPIR AND STEVEN SKIENA. Optimal boarding policies for thin passengers
- 1115 Correction
- 1117 Index (General Applied Probability)
- 1119 Index (Stochastic Geometry and Statistical Applications)
